

The Impact of a Sustainable Livelihoods Intervention on Child Labor: Evidence from a Randomized Trial of the KASAMA Program in the Philippines

Final Report
October 2018

Abstract

Objectives To measure the impact of a productive asset grant on families with child labor

Design Clustered randomized controlled trial

Setting 164 communities (barangays) across the island of Luzon in the Philippines

Participants 2,296 households with child laborers present in 2016

Intervention A PHP10,000 productive asset grant combined with 3 days of training on business practices and child labor

Main outcome measures Child labor, economic activity, household income, household consumption

Results Productive asset grant stimulates new family businesses and assists in the survival of existing family firms. It increases consumption and improves food security while involving children in more economic activity. Child welfare improves despite increases in work.

Conclusions Families on average are effective at leveraging productive asset grant to ameliorate poverty. Additional economic activity in the household draws in marginal workers including children not in child labor and adults outside of the labor force.

Trial registration AEA RCT Registry ID AEARCTR-0001139

Funding Program administered and funded by the Department of Labor and Employment of the Government of the Philippines. Evaluation funded by a cooperative agreement between Innovations for Poverty Action (IPA) and the U.S. Department of Labor, IL-27208-15-75-K-9

Acknowledgments and Disclaimer

We would like to thank a number of people whose efforts, either directly or indirectly, culminated in the completion of this report.

We deeply appreciate all of the support we have received from the Philippine Department of Labor and Employment's senior management team and support staff, including Secretary Silvestre Bello and former Secretary Rosalinda Dimapilis-Baldoz, Ahmma Charisma Lobrin-Satumba, Maribeth Casin, Kim Diaz, Ginette Lopez, Carol Puno, and the Regional Directors and Regional Focal Persons. Their enthusiasm for the study and assistance throughout has been critical to its continued success.

This report would not have been possible without the hard work of IPA Research Associates Victoria Lacasa, Ryan McLaughlin, and Odbayar Batmunkh. We also very much appreciate Field Managers Christine Ajoc, Gina Gatarin, and Precious "Gift" Baroy's work overseeing a large field team of enumerators as well as the cooperation of local government officials that helped validate the household lists of respondents.

We would also like to thank the U.S. Department of Labor's International Labor Affairs Bureau, namely Lauren Damme and Celeste Lemrow. Their continued support and input at all stages of the project have been invaluable.

This evaluation was conducted in partnership between The Philippine Department of Labor and Employment (DOLE), Innovations for Poverty Action (IPA), and the United States Department of Labor (USDOL). Each party carried out the following roles in the project:

1. **DOLE.** DOLE is the primary government agency leading the progressive elimination of child labor in the Philippines and responsible for formulating and implementing the KASAMA Program. In particular, KASAMA is under DOLE's Bureau of Workers with Special Concerns (BWSC), so the BWSC oversaw the evaluation from DOLE's end.
2. **Innovations for Poverty Action (IPA).** IPA is an international non-governmental organization that conducts rigorous evaluations of social programs to promote evidence-based policy-making. IPA, under the leadership of Principal Investigators (PIs) Eric Edmonds (Dartmouth College) and Caroline Theoharides (Amherst College), conducted the evaluation of the KASAMA Program.
3. **United States Department of Labor (USDOL).** USDOL funded this evaluation through the Bureau of International Labor Affairs (ILAB)'s Office of Child Labor, Forced Labor and Human Trafficking. ILAB is tasked to carry out the department's international responsibilities and funded this evaluation, among others, to build the body of evidence of effective ways to sustainably eliminate child labor around the world.

Funding for this project was provided by the United States Department of Labor under cooperative agreement IL-27208-15-75-K-9. This material does not necessarily reflect the views

or policies of the United States Department of Labor, nor does the mention of trade names, commercial products, or organizations imply endorsement by the United States Government.

Executive Summary

Child labor is a tragic feature of life in poverty. For some, child labor starts a lifetime of disadvantage that creates a cycle of poverty through the generations. Current global anti-child labor policy is focused on learning how to eliminate hazardous child labor sustainably through the promotion of alternative livelihoods that obviate the need for child labor income.

The Philippine government is a global leader in this discussion through the Philippine Department of Labor and Employment's (DOLE) *Kabuhayan Para sa Magulang ng Batang Manggagawa* (KASAMA) Program. This program provides in-kind transfers of equipment, tools, and/or raw materials and trainings to parents of child laborers in an effort to promote sustainable, alternative forms of income that replace the family's use of child labor.

In support of the Philippine government's significant efforts to eliminate the worst forms of child labor, the U.S. Department of Labor (USDOL) engaged Innovations for Poverty Action (IPA) to conduct an evaluation of the impact of the KASAMA Program. Evidence of the impact of such livelihood programs on child labor practices is limited, and this study is one of the first rigorous evaluations of its kind that can inform child labor interventions in the Philippines and across the world. To do so, the study answers the following questions:

1. Does sustainable livelihood promotion have an effect on how the household generates its livelihood?
2. Does sustainable livelihood promotion change the household's standard of living?
3. Does sustainable livelihood promotion reduce the prevalence of child labor amongst those already engaged?
4. Does sustainable livelihood promotion reduce entry into child labor?

These questions outline the theory of change: KASAMA transfers a productive asset to a poor family. That transfer affects an immediate change in the earnings opportunities located within the home. This influences child labor through the income associated with the asset or by changing the employment options available to the child.

To evaluate the impact of KASAMA, researchers must observe communities receiving KASAMA and have a hypothesis about what would happen in these KASAMA-receiving communities absent the program. A clustered randomized control trial (RCT) evaluation design was chosen in order to identify the impact of KASAMA on child labor and household economic outcomes. The evaluation's sample consists of 164 communities, or *barangays*, selected by DOLE in Regions I, II, III, IV-A, and V on the island of Luzon. A lottery was used by the IPA research team to allocate these 164 barangays into treatment and control groups. The random assignment of barangays to either treatment or control creates two groups that are the same on average, informing us of what would have happened in KASAMA communities absent the program.

The impact evaluation of KASAMA began with a baseline survey conducted between February and May 2016. A total of 2,296 households with 4,309 children from these 164 communities

were interviewed in the study. Eligible households in treatment communities were informed of their opportunity after the baseline survey and benefits were distributed starting in August of 2016. KASAMA did not require families to promise not to use child labor in order to receive benefits. An endline survey was conducted between February and June 2018 and serves as the principal source of data for this report. Our study, by virtue of an endline survey approximately 18 months past benefit distribution, is designed to capture any changes that sustain and persist beyond the initial benefit distribution. Enumerators were employed by IPA and were not informed about DOLE's intervention, this evaluation's objectives, or subjects' participation status in the DOLE program. Structured, qualitative interviews followed both the baseline and endline surveys.

The impact evaluation was a successful collaboration between DOLE and IPA. DOLE succeeded in implementing KASAMA in all but one of the treatment barangays, and IPA succeeded in recapturing 2,288 households in the endline survey, resulting in an attrition rate of three tenths of one percent. Our analysis is based on comparing children in barangays randomly assigned to treatment to children in barangays randomly assigned to control. This intent-to-treat style analysis includes children in the treatment group regardless of whether their family actually received KASAMA.

In this case, KASAMA reached its intended beneficiaries. 73 percent of children living in treated households are child laborers, and treated households are poor, living on less than \$1.30 per person per day on average. Treatment increases the probability of reporting receiving KASAMA by 84 percentage points (off a 4 percent base), and this leads to increases in the prevalence of households reporting an agricultural or non-agricultural household business by 8.8 percentage points (11 percent). We see an additional 0.26 new non-farm enterprises created within the last year in treatment households and 0.36 more total non-farm enterprises (both new and previously existing) in treatment relative to control households. Because the number of new enterprises is less than the number of total enterprises, we can infer that KASAMA leads both to new enterprises and the continuation of old enterprises that would not have survived absent KASAMA.

Our qualitative research documented extensive asset churning. Beneficiaries often followed a trial-and-error approach to establishing a profitable business, converting their KASAMA asset transfer into an enterprise other than that originally planned until they found success. For example, one woman received a rice vending business from KASAMA, which she sold for a sari-sari store and later sold that for a piggery. Hence, even the new non-farm enterprises created by KASAMA households within the last year might not be directly in the asset provided by KASAMA.

The additional family income associated with treatment is USD \$581 per year. Eighty-eight percent of treatment households self-report receiving KASAMA. This implies that the actual additional income associated with KASAMA by beneficiary households is \$660 per year because \$581 includes 12 percent of households that did not report receiving KASAMA. The actual value of the assets transferred under KASAMA is \$518, so beneficiary households earning an additional \$660 per year implies that these households have earned a 27 percent rate of return on KASAMA.

This additional income is associated with improvements in most measures of household well-being. Per capita expenditures improve by 14 percent. The most robust finding is that treatment households report improvements in food security. These improvements in food security are driven by adults and children in the household not needing to skip meals or borrow to eat.

While KASAMA reaches its targeted population, obtains a positive rate of return on average, and leaves its beneficiaries better off, the results on child labor are not as clearly positive. In a setting where there are plenty of employment opportunities for children in the labor market, a productive asset within the home should only lead to additional income from that asset. However, in a setting where child labor opportunities outside the household are limited, a growth in employment opportunities in the home may draw more children into work. This is what we find, especially for children who are not working before the intervention. Many of these children are below the minimum age, leading to increases in entry to child labor in some subpopulations. Sometimes that work is hazardous, so we see increases in entry to hazardous child labor in some populations as well.

Households that have an existing non-agricultural business at baseline are better able to generate additional income from KASAMA than households that did not have a non-agricultural business at baseline. However, households with an existing business also increase child labor more in response to KASAMA. This evidence suggests that while households with an existing business can generate additional income with the KASAMA productive assets, they need to draw on children to handle the expanded business. Households without a business at baseline respond to KASAMA with more consumption and more economic activity of adults without needing to bring in children. This finding highlights the tension in KASAMA. Those who know how to run their own business are doing so and do not have slack time to devote to an expansion. However, those that do not know how to run a business are not well positioned to succeed with KASAMA.

Households start or preserve existing businesses. They increase their income. They consume more and have better food security. How do these increases in well-being weigh against children working more? We collect extensive data on psycho-social well-being, and we find that, despite the rise in economically active children, they appear more satisfied in their life and happier. In particular, welfare improvements seem to be largely amongst those children already in child labor at baseline. This rise in child well-being is slightly smaller than one would expect solely from the value of the asset transfer in KASAMA. Hence, it is possible that the rise in child work tempers the benefits of KASAMA for children, but they still appear to be better off than they would have been without KASAMA. Of course, our study cannot say anything about the long-term effects of this additional work although the increase in total hours is 1.4 hours per week on average.

Overall, our findings raise questions about the purpose of providing a productive asset transfer to families with child labor present. These families are poor, often struggling to get by. KASAMA ameliorates their poverty, improves food security, and child satisfaction with their lives. If the purpose of KASAMA is to use the presence of child labor as a targeting tool to provide livelihood support to the most desperate, it seems to succeed in achieving its goal. When a productive asset is added to a family doing everything it can to get by, the family is going to

have to bring in new workers because of the asset. These can be elder women, women at peak child bearing ages, and children. Thus, our findings highlight a tension between helping families with child labor ameliorate their poverty through a productive asset transfer and the goal of keeping children from working.

1. Introduction

1.1 Scientific Background and Explanation of Rationale

In 2012, one out of every five Filipino families was considered poor, or approximately 4.2 million families¹. While poverty has widespread harmful effects, especially on children, many impoverished families often view child labor as a necessary means for survival. In the Philippines in 2011, 5.5 out of the 29.02 million Filipino children (5-17 years-old) were working, and 3.21 million of them were identified as participating in unlawful child labor. Almost all of these children, 2.99 million (93%), were engaging in hazardous child labor, or activities where chemical, physical and biological hazards exist. Both boys and girls are engaging in hazardous labor activities; however, there are twice as many boys than girls in such activities.² While a majority of these child laborers participate in agricultural activities, such as sugarcane production, other areas of labor include participation in domestic help, production of pyrotechnics, scavenging, deep sea fishing, mining, prostitution, and drug trafficking.³

In 2013, the US Department of Labor's Bureau of International Labor Affairs published its report, *Findings on the Worst Forms of Child Labor*, taking note of the Philippines' "significant advancement in efforts to eliminate worst forms of child labor." In their continued efforts to reduce child labor, especially in hazardous environments, DOLE is implementing *Kabuhayan Para sa Magulang ng Batang Manggagawa* (KASAMA) in some of the Philippines' poorest provinces. In the KASAMA program, DOLE focuses on improving access to sources of income for the parents of child laborers with the goal of eliminating poverty motives for child labor.

Because KASAMA is a central part of the Government of the Philippines' anti-child labor program, it is important to understand its influence on child labor in advance of continued expansion of the program. This evaluation is meant to fill that knowledge gap by conducting a clustered randomized trial of KASAMA's impact across 164 communities. A clustered randomized trial was feasible for the evaluation because resource constraints limited the ability of DOLE to implement KASAMA in all eligible communities. Hence, a lottery could be used to choose which communities receive KASAMA during the evaluation period. A clustered design

was chosen out of concern about excluding needy families within communities where KASAMA was being implemented. While a total of 14 families per community are interviewed as a part of this study, DOLE was not restricted by this evaluation to provide KASAMA benefits to only 14 families in selected treatment communities.⁴ DOLE did not have resources to provide benefits to families in control communities.

1.2 Main Hypotheses

Hypothesis 1: Sustainable livelihood promotion has no effect on how the household generates its livelihood.⁵

Our discussion of child labor highlights that it is the outcome of a complex calculation involving many factors, including the different types of activities available to the child. Hence, the introduction of new activities into the household through a sustainable livelihood project has the potential to influence child labor by changing the economic structure of the household. This might be through changes in income (hypothesis 1) or it might come through different demands on the time of children within the family's activities. Livelihood promotion has considerable scope for diverting children into different activities, and this evaluation attempts to understand how important these activities are for changes in child labor.

Hypothesis 2: Sustainable livelihood promotion does not change the household's standard of living.

A critical goal of this evaluation is to understand how KASAMA reduces child labor. The most direct channel is through changes in household income, and we have ample evidence that entry into child labor can be extremely income elastic. Hence, an important aspect of understanding the impact of KASAMA is to identify whether it changes living standards.

Hypothesis 3: Sustainable livelihood promotion does not reduce the prevalence of child labor amongst those already engaged.

The stated goal of the KASAMA program is to stop child labor where it exists. Hence, a central question in the evaluation is whether KASAMA stops child labor amongst children already engaged in child labor. Few RCTs have found an impact of any intervention on participation in child labor for children already engaged in child labor. Hence, a rejection of this hypothesis would be an extremely important finding for those believing in sustainable livelihood promotion as a tool to stop existing child labor.

⁴ DOLE administered the intervention to an average five additional, non-sample households per barangay in 35 percent of treatment barangays.

⁵ This study was registered in the American Economic Association (AEA) RCT Registry, RCT ID AEARCTR-0001139, and the four main hypotheses are outlined in the pre-analysis plan. Link to registration: <https://www.socialscisearch.org/trials/1139>.

Hypothesis 4: Sustainable livelihood promotion does not reduce entry into child labor.

Most child laborers live with other children. In fact, a standard marker of vulnerability to child labor is a child co-resident with a child laborer. Hence, even though KASAMA is targeted to families where child labor exists, it is likely that KASAMA also influences children not working at the start of the intervention. Most RCTs aimed at populations vulnerable to child labor find some elasticity of entry into child labor with interventions. Hence, the evaluation team suspects a priori that influencing entry into child labor will be more easily accomplished than reduction in child labor amongst those already engaged.

2. Methods

2.1 Trial Design

2.1.1 Description

This report is based on a clustered randomized trial with an allocation ratio of 1:1. Starting in 2015, the research team worked with DOLE to precisely define the treatment, define the geographic coverage of the evaluation, and pilot the evaluation design. The evaluation includes a sample of 164 communities, or *barangays*, and 2,296 households selected from those communities.

The project operated in Regions I, II, III, IV-A, and V (throughout the island of Luzon) where child labor is particularly prevalent, as determined from the 2011 Philippine Survey of Children. Maps illustrating the sample barangays are shown in Appendix F1. In particular, these regions engage in agricultural production of key exports as well as gold mining. Individual communities are enrolled in the study after identification by DOLE as targets. Target communities are communities that have not previously received KASAMA but have high levels of child labor.

From the DOLE list of target communities, half were randomly assigned to receive the KASAMA treatment using a simple lottery. The lottery was conducted in IPA offices using a random number generator. The other half of communities form the control group.

While randomization takes place at the community level, KASAMA benefits are distributed to households with child labor present. DOLE identified at least 14 eligible households from each of the 164 study communities in advance of the baseline survey and before randomization.

The KASAMA program was implemented by DOLE. IPA collected all data, independent of DOLE, with assurances as to the confidentiality of responses. The impact evaluation relies on data collected at the household level with data on household behavior, the time allocation of individuals within the household, and the status of household members living elsewhere.

2.1.2 Changes in Trial Design Post Commencement

We believe that there are three important changes in trial design that occurred subsequent to our evaluation design plan.

The geographic coverage of the study was expanded by DOLE after the original evaluation design plan but before the start of field work. Region 1 was added.

At the evaluation design plan stage, our understanding was that the intervention included a commitment not to use child labor in the household. That commitment was not implemented. Hence, KASAMA did not require families to promise not to use child labor.

A midline survey was added in the middle of the project timeline after the conclusion of the baseline survey and after random assignment. This abbreviated survey's primary purpose was to verify program implementation and to maintain contact with subjects in an effort to reduce attrition. There were no other changes in the evaluation design or program implementation.

2.2 Participants

The study included 2,296 households and interviewed both the household member with the most knowledge of economic activity and all children aged 10-17 in the household. Compared to the Philippines overall, the study population is more Catholic, more educated, more urban and residing with more family members.

2.2.1 Eligibility criteria

While randomization takes place at the community level, KASAMA benefits are distributed to households with child labor present. DOLE identified at least 14 eligible households from each of the 164 study communities in advance of the baseline survey and before randomization. DOLE maintains lists of households with child labor present from the national targeting system for poverty reduction (*Listahanan*) and in conjunction with Local Government Units (LGUs). Child laborers that are not household-based or in households not known to DOLE are not eligible for KASAMA in either our study or the Philippines in general. Prior to surveying, the research team worked with the LGU to validate the lists provided by DOLE. When more than 14 households were identified, the research team used a simple random number generator to select 14 at random for the evaluation.

2.2.2 Settings and locations

Our evaluation of KASAMA takes place in 164 communities (legally, barangays) in Regions I, II, III, IV-A, and V on the island of Luzon. Sample communities were selected by DOLE using the following criteria:

1. Prevalence of child labor as determined by the Philippine Statistical Authority (PSA) using the 2011 Philippine Survey of Children.
2. DOLE intends to target community for livelihood assistance but has not yet provided any KASAMA benefits.
3. No political opposition, meaning Local Government Units are open to receiving KASAMA as determined by DOLE's regional focal persons.
4. Withholding KASAMA from the community won't constrain DOLE's annual achievements, implying no communities that DOLE is near certifying as child labor free.
5. Logistically feasible to reach the community within the project's budget.⁶

⁶ As a part of the Campaign for a Child Labor-Free Barangay, DOLE categorizes communities as "New Frontier," "Continuing," or "Low-Hanging Fruit." "Low-Hanging Fruit" barangays are those where anti-child labor programs and services already exist and stakeholders have been mobilized to end child labor practices, approaching "child labor-free barangay" certification pursuant to Administrative Order 657. Among the five sample regions included in

In all communities, DOLE has not undertaken projects to address child labor.⁷

2.2.3 Protection of Human Subjects

IPA requires all research studies and corresponding protocols to be approved by IPA's Institutional Review Board (IRB) and/or the IRB of a PI's university or institution. All data collected are kept as confidential as possible and no individuals are currently or will be identified in any report or publication. All surveyed individuals were assigned a unique identification code, and files with personally identifying information (PII) (such as names and addresses) are stored separately from survey responses. All IPA staff received training on confidentiality procedures and were required to sign confidentiality agreements. The PIs and the members of the research team are the only people with access to the codebook linking survey IDs and identifying information. All files (those with PII and those without) are encrypted using Boxcryptor. We have cleaned and de-identified the data, and once the study is complete, the data will be made available to other researchers upon request.

All data were collected electronically using the SurveyCTO Collect application (a variant of Open Data Kit (ODK)) for Android devices. All Android devices were encrypted and the data, which was encrypted at the point of collection, was transferred (encrypted) through a secure WiFi or phone connection from the enumerator's passcode-protected device to the project's password-protected encrypted individual server, maintained by SurveyCTO. All files (those with PII and those without) were encrypted using Boxcryptor and stored on password-protected computers. All respondents were given a unique identification number, and PII were saved in separate files from the survey responses and stored on the password-protected cold (offline) computers and on an externally encrypted hard disk and kept separately from the rest of the data.

2.3 Intervention

2.3.1 Program description

Principally, KASAMA is a large, one-time transfer of PHP10,000 (USD \$518 in PPP terms) to a family with child laborers present. KASAMA was implemented in our study areas by DOLE following their usual operating procedures.⁸ Researchers were not involved in program implementation or development. Hence, the procurement and distribution of assets, all trainings,

the study, seven barangays were excluded as "Low-Hanging Fruit" based on data provided by the Bureau of Workers with Special Concerns in September 2015. All barangays included in the study were "New Frontier" since they were classified as not yet having received livelihood assistance.

⁷In "Low Hanging Fruit" barangays, KASAMA beneficiaries are required to sign a document pledging not to use child labor with the productive asset. In some early documentation, such as our analysis plan, we thought that would be true for our intervention as well. However, subsequent to that writing, we have learned that DOLE does not ask for any such commitment in other barangay classifications. Hence, our beneficiaries have signed no such pledge.

⁸As a part of DOLE's Child Labor Prevention and Elimination program, DOLE categorizes communities as "New Frontier," "Continuing," or "Low Hanging Fruit." In "Low Hanging Fruit" barangays, KASAMA beneficiaries are required to sign a document pledging not to use child labor with the productive asset. In some early documentation, such as our analysis plan, we thought that would be true for our intervention as well. However, subsequent to that writing, we have learned that DOLE does not ask for any such commitment in other barangay classifications. Hence, our beneficiaries have signed no such pledge.

and all monitoring and audits were implemented following DOLE's way of implementing KASAMA.

After determining target barangays, DOLE staff identified eligible households in the barangay based on DOLE's lists of households with child labor present. These lists are based on the national targeting system for poverty reduction (*Listahanan*) and information from the LGU. At the start of launching KASAMA in a barangay, DOLE staff verify eligibility in cooperation with barangay and local governmental officials.

When a household's eligibility has been verified, either a member of DOLE's regional staff or a barangay official invites a member of the eligible household to a meeting where the program is explained, training is provided on developing a business plan, and potential beneficiaries specify one type of asset they would like to be provided with the PHP10,000.

The transfer of the asset of choice was made in-kind rather than in cash. Either DOLE or a subcontractor referred to as an Accredited Co-Partner (ACP) work with beneficiaries to identify the type(s) of productive assets that the beneficiary wants, and those assets are provided to the beneficiary. This may include equipment, tools, raw material, and inventory items. DOLE's regional focal person decides whether to subcontract or directly provide the asset, and assets are provided following the Government of the Philippines rules for procurement. In some instances, the procurement rules limited the types of assets that could be provided (e.g. acquiring livestock) because official receipts could not be secured from local suppliers. In this study, DOLE procured assets in all regions except for Region III, where the LGU acted as the ACP.

In addition to the asset transfer, beneficiaries are asked to attend several training sessions. On paper, this is supposed to be 3 one-day trainings. DOLE believes that the trainings are important in making the asset transfer successful. These trainings provide assistance in developing a business plan, some education on bookkeeping, marketing and financial literacy, and an orientation on child labor. The child labor orientation is a description of how child labor is defined legally in the Philippines and how the government is engaging communities to reduce child labor. It is not specific to KASAMA.

2.3.2 Logic model

We expect the impact of KASAMA to flow through the impact of the livelihood promotion intervention rather than the child labor orientation. As we discuss below, we found very little evidence that the child labor training registered with beneficiaries. Figure 1 contains the logic model for how we hypothesized engagement with KASAMA would impact child labor for direct beneficiaries.

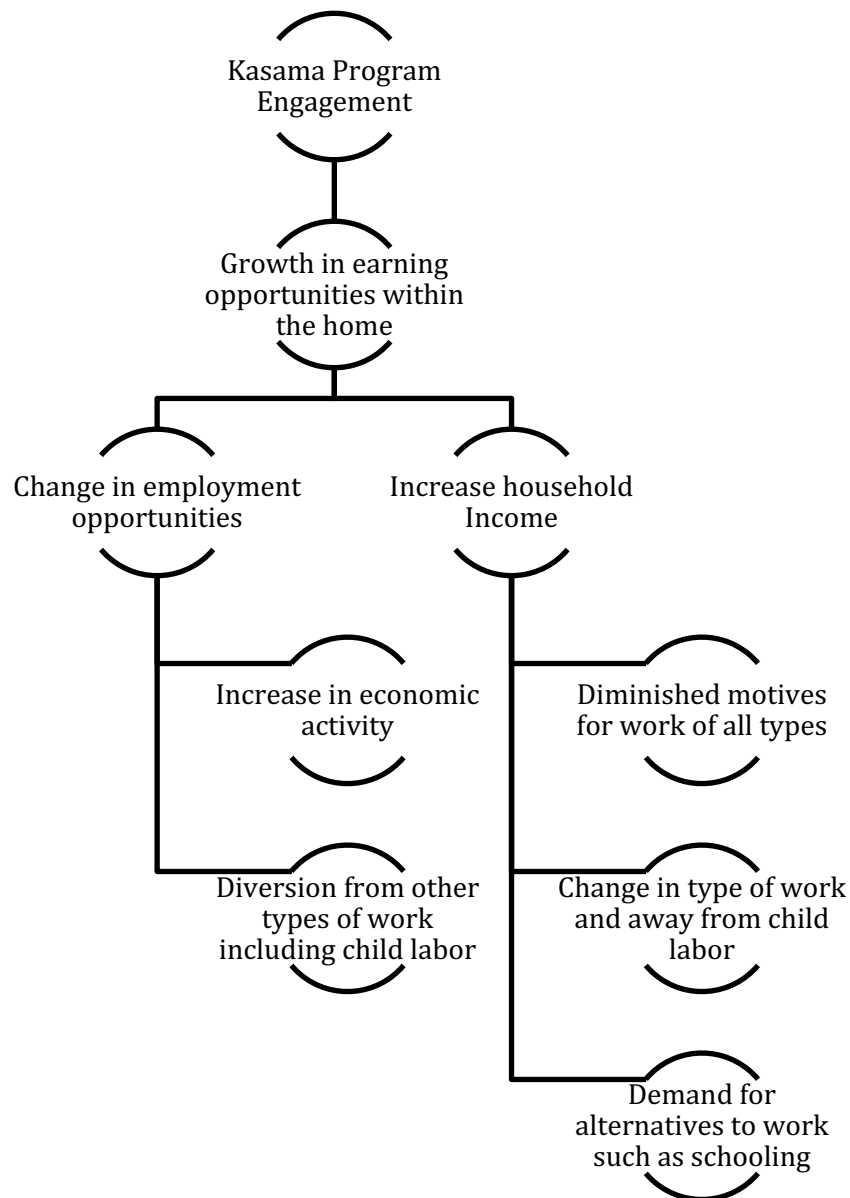

Figure 1: Logic Model

KASAMA transfers a productive asset to a poor family. That transfer affects an immediate change in the earnings opportunities located within the home. This influences child labor through the income associated with the asset or by changing the employment options available to the child.

The transfer of a productive asset can increase income in two ways. First, the household can simply sell off the asset and increase their family's endowment by the amount they can sell the asset for. For example, a household given an endowment of rice can sell the rice and immediately be wealthier from that sale. Second, the household can leverage the asset to earn more income from the productive asset. For example, a household might be given a fishing boat. While they could sell the boat for money and immediately be better off, they could also fish with the boat, earning a stream of future income from the asset. Additional income could open up still more investment opportunities for the family, setting off a virtuous cycle of progressively higher wealth.

The direct resource transfer or the increase in household income coming through the growth in earnings opportunities within the home may impact child labor in three ways. First, it might diminish the economic motives that lead to child labor in the first place. Liquidity or subsistence constraints might be relaxed, or poor families might simply feel that they can forego child labor. Second, it might change the type of work children perform. Additional income might lead to more household goods where child time is complimentary. For example, additional income might lead to a bicycle purchase which a child could use in a delivery business, or it might lead to a washing machine that would replace the child's time manually washing clothes. Alternatively, improved income might lead households to care more about the negative amenities associated with work that qualifies as child labor. Third, increased income might lead to demand for alternatives to work such as leisure or schooling. Of course, increased income could also change the types of employment opportunities in the household depending on the impact of income directly on the economic structure of the household. All of these channels could be in play immediately with the initial distribution of benefits, and all should persist if the impact of KASAMA on income sustains.

The expansion of earning opportunities within KASAMA families can also impact child labor, holding the impact of KASAMA on income fixed. When markets for child labor are complete, the labor market will determine the value of the child's time to the household. However, when employment options are limited for children, KASAMA could create new employment opportunities that were not available previously. While this work might not be legally child labor, we could easily see more economic activity among children as a result of KASAMA.

The expansion of earning opportunities could also lead to changes in how children work. This might reduce child labor if KASAMA draws children into the home to either work in the new activities or to replace the household activities previously done by a parent drawn into the new activity.

Overall, KASAMA, by virtue of being a large, one-time transfer may have short term effects on the household through all of the mechanisms described in Figure 1, and these effects may be immediately evident (although it is reasonable to expect a change in the economic structure of the household to take several months to evolve). Our study, by virtue of an endline survey approximately 18 months past benefit distribution, is designed to capture these changes that sustain and persist beyond the initial benefit distribution.

2.3.3 Main Hypotheses

2.4 Outcomes

All outcomes are precisely defined in Appendix C.

2.4.1 Pre-specified definitions for Hypothesis 1

- *Household reports receiving KASAMA.* Receipt of KASAMA is measured through household self-reports in a section of the survey on government transfers.
- *Household reports agricultural or non-agricultural family firm.* KASAMA provides households with an in-kind transfer to support a family enterprise. This measure tests if households actually have such a firm.

- *Family firm-generated income.* The theory of change specifies that growth in earnings due to new family firms will lead to changes in employment opportunities.
- *Economic activity of all household members.* Not all economic activity is child labor. This study uses a standard time allocation module as a part of the household-based survey to collect a complete picture of the activities of children as well as adults. This view of time allocation of adults is useful for identifying how the sources of livelihood change in the household.

Further detail is in Appendix C1.

2.4.2 Pre-specified definitions for Hypothesis 2

- *Household per capita consumption.* The primary measure of living standards used in this study is consumption based. A consumption-based measure has advantages over an income measure in households with seasonal income or significant non-market contributors to livelihood.
- *Total food expenditures.* In addition to household per capita consumption, we also measure total food expenditures.
- *Food security index.* Food security is measured by a standardized index of household reports of days without food, missing meals, begging, diet composition, and the availability of food in the household.
- *School attendance rate.* The standard of living of the household also relies on if children in the household are attending school.

Further detail is in Appendix C2.

2.4.3 Pre-specified definitions for Hypotheses 3 and 4

- *Child labor.* Child labor is defined using the official Philippines definition. The data collected to measure child labor also support measuring the prevalence of hazardous child labor as well (included as a secondary outcome).
- *Child economically active.* In addition to child labor, we measure economic activity, as defined by the U.N. System of National Accounts, as all production that could be destined for the market. Economic activity can occur both inside and outside the home.
- *Child works for pay.* Not all child labor is for pay, and we explore work for pay as a separate outcome.

Further detail is in Appendix C3.

2.4.4 Pre-specified definitions for secondary outcomes

We examine a number of secondary outcomes in order to further test our four key hypotheses. These are defined in detail in Appendix C.

For Hypothesis 1, we include the following as secondary outcomes in an effort to further explore how income generation has changed in response to KASAMA. See Appendix C1 for detailed definitions.

- *Number of non-farm enterprises*
- *Number of livestock*
- *Amount of land owned*
- *Number of new non-farm enterprises*
- *Interest paid on loans*
- *Reports borrowing*
- *Remittance income*

To further explore Hypothesis 2 and the effects of KASAMA on household standard of living, we include the following as secondary outcomes. See Appendix C2 for detailed definitions.

- *Value of durable goods.*
- *Child is attending school*
- *Child is behind grade level*

To further explore the effects of KASAMA on the prevalence of child labor amongst those already engaged and on entry to child labor (Hypotheses 3 and 4), we include the following as secondary outcomes See Appendix C3 for detailed definitions.

- *Child is in hazardous child labor.*
- *Child employed in family-based economic activity.*
- *Child works outside the family.*
- *Child collects wood or water.*
- *Hours employed.*
- *Hours in unpaid household services.*
- *Child in forced or bonded labor.*
- *Child is trafficked.*
- *Children (Potentially) Engaged in Other Worst Form of Child Labor.*
- *Children (Potentially) Engaged in Worst Form of Child Labor.*

2.4.5 Changes to outcomes after trial commencement

Experience in asking about family firms led the research team to refine the way questions about farm and nonfarm enterprises were collected at endline relative to baseline. Since the analysis is principally based around the endline survey, the change in question reduces the value of baseline family firm measures as controls, but controls are only serving an error reduction purpose given the balance of the randomization. Hence, such measurement error should not generate bias.

As the study progressed, the research team became concerned that our results would require a more nuanced discussion of child well-being than collected at baseline. As such, additional questions related to the child's life satisfaction and mental health were added to the survey, causing our child well-being measures at endline to be considerably more detailed and thorough compared to baseline. Specifically, we added a module to the household survey to ask caregivers of children 10-17 about the challenges their children face in their day to day lives using the strength and difficulties questionnaire (Goodman 1997). To the child survey, we added the Student Life Satisfaction Scale (Huebner 1991) which is scored by summing up answers to all questions. We also added the Center for Epidemiological Studies Depression Scale for Children (Radloff 1977). Finally, we added several questions capturing the child's aspirations for the future which allow us to create indicators for whether the child has short-term goals, long term

goals, and plans to achieve long-term goals. These outcomes are precisely defined in Appendix C4.

Additional question refinements occurred based on survey and pilot experience, but we do not believe they substantively impact our discussion here.

2.5 Sample size

2.5.1 Determination

The statistical power of an RCT is the probability of detecting a given effect at a given significance level, in the event the intervention has an impact. An under-powered study runs the risk of concluding that the intervention had no impact when in fact it did, simply because the sample was not large enough to give statistically significant results.

Power calculations for the full evaluation can be constructed using data on child labor in the Philippines where 10 percent of children are in hazardous forms of child labor.⁹ The formulas employed in power calculations are laid out in Hayes and Bennett, “Simple sample-size calculations for cluster-randomized trials”, a reference article for calculating power in cluster-randomized trials.¹⁰ The formula employed for calculating the number of clusters required is as follows, where c is the number of clusters, n is the number of individuals sampled per cluster, k is the intracluster correlation coefficient, and π_1 and π_0 are the population indicators in the presence and absence of the intervention, respectively. $z_{\alpha/2}$ and z_{β} are standard normal distribution values corresponding to upper tail probabilities of $\alpha/2$ and β , and the sample size provides a power of $100(1 - \beta)\%$ of observing an effect significant at the level α .

$$(1) \ c = 1 + (z_{\alpha/2} + z_{\beta})^2 [\pi_0(1 - \pi_0)/n + \pi_1(1 - \pi_1)/n + k^2(\pi_0^2 + \pi_1^2)] / (\pi_0 - \pi_1)^2$$

Following convention in the social sciences, for power calculations we used a significance level (probability of Type I error, i.e. rejecting the null hypothesis when it is in fact true) of 0.05 (alpha in the formula) and power (probability of avoiding a Type II error, i.e. not rejecting the null hypothesis when it is in fact false) of 0.8. We assume a one-sided test and an intracluster correlation of 0.2, consistent with estimates that have been used in the literature on randomized controlled trials in the educational sector (Hedges and Hedberg 2007).¹¹ The assumption of an intracluster correlation of 0.2 seemed to be the most commonly used intracluster correlation for education-related interventions at the time of study design. In our data, which was unavailable at the design stage, we observe that a lower intracluster correlation of 0.07 would have been appropriate for our child labor outcome. The lower intracluster correlation coefficient realized in our population implies that our statistical tests should have more statistical power than estimated at the design stage.

¹⁰ Hayes, R.J. and S. Bennett. 1999. “Simple sample size calculations for cluster-randomized trials.” *International Journal of Epidemiology* 28: 319-326.

¹¹ <http://drdc.uchicago.edu/what/hedges-hedberg.pdf>.

Given that all KASAMA households should have child labor present, we can detect a 10 percent decline in the prevalence of hazardous child labor with 700 households and 50 communities, using the assumptions of the previous paragraph. However, this sample was too small for DOLE given their political objectives for the year. Hence, the number of study communities was increased to 164 communities and a total number of 2,296 households. The names and locations of these 2,296 households that make up our baseline sample were provided to us by DOLE using their administrative records of eligible families.¹²

To calculate the minimum detectable effect, we use the following formula:

$$MDE = (z_{\alpha/2} + z_{\beta}) \sqrt{\frac{1}{P(1-P)}} \sqrt{\frac{\sigma^2}{N}} \sqrt{1 + (n-1)k}$$

where $z_{\alpha/2}$ and z_{β} are standard normal distribution values corresponding to upper tail probabilities of $\alpha/2$ and β , and P is the proportion of villages randomized to the treatment. We define N as the number of clusters, c , times the number of observations per cluster, n . k is the intraclass correlation coefficient. For a given sample size N , we prefer c to be large and n to be small as we get a smaller minimum detectable effect with a large number of clusters and small number of observations per cluster, than with a small number of clusters and large number of observations per cluster.

In the case of the KASAMA intervention, with $c=164$ villages and $n=14$ observations per village, our minimum detectable effect is an 8.5 percent decline in child labor. Comparing this to the previous literature on child labor (Edmonds and Schady, 2012; Edmonds and Shrestha, 2014), we expect an effect substantially larger than this minimum detectable effect in response to the KASAMA intervention.

2.5.2 Replacement Protocols

At baseline, households that refused, did not have children aged 10 – 17, could not be located, or were unavailable after three visits for interviews were replaced by another qualified household (See Figure 2).¹³ The replacement household lists were randomized by the research team, and survey supervisors assigned such households to enumerators in consecutive order as they appeared in the list. These households were included in the random survey audit at baseline to help verify the enumerators' findings and ensure accountability. In Section 2.8.2, we provide more detail on survey audits.

¹² In the original Evaluation Design Plan, our power calculations assumed that 10 percent of households in the Philippines are engaged in hazardous child labor. Thus, based on the assumptions in the paragraph above, we anticipated a 50 percent decline in the prevalence of hazardous child labor, which implied a sample size of 3,500 households from 250 communities, 14 households per community. As we developed the study design with DOLE, we learned that all households should have child labor, and so the power calculations were updated since the original EDP.

¹³ Survey teams located households through the help of barangay officials and local community members.

2.5.3 Interim analysis and stopping guidelines

The sample was selected ex-ante based on a combination of statistical considerations and DOLE budget. Hence there were no applicable stopping guidelines for the recruitment of participants.

The study also was of a determined length before it began, so there were no applicable interim analysis or stopping rules that would trigger the end of the study.

There was a midterm study and a monitoring report that was prepared by IPA for USDOL, but that had no implications for when the study would be terminated.

2.6 Randomization

2.6.1 Method

Randomization was conducted in private by the IPA principal investigators. Prior to randomization, the 164 barangays were divided into 4 cells based on 1.) characterization of the community as urban or rural, and 2.) whether all 14 respondent households within the barangay were beneficiaries of the Philippine government's conditional cash transfer program, Pantawid Pamilyang Pilipino Program (4Ps), or not (complete 4Ps vs incomplete 4Ps) according to baseline survey responses. For a barangay to be classified as complete 4Ps, all 14 respondent households in the barangay must have reported 4Ps receipt at baseline. A random number drawn from a uniform distribution was drawn for each barangay in each cell, and barangays with a draw below 0.5 were assigned to treatment. Appendix Table F2 lists all sample barangays and their treatment status.

2.6.2 Agents

KASAMA implementation was conducted by DOLE regional and provincial staff or ACPs (e.g. LGUs) depending on how DOLE usually operates in a given barangay. In this study, DOLE administered all benefits except for Region III, where the LGU procured and distributed assets.

Data collection was conducted by professional survey staff hired, trained, and supervised by IPA. They had no direct engagement with DOLE regional staff and no involvement in program implementation

2.6.3 Blinding

DOLE regional staff were aware of the evaluation and the need to not provide KASAMA benefits to the control barangays during the study period.

IPA survey staff were not informed about the evaluation, its goals, or a subject's treatment status. Survey subjects were informed that their decision to consent (or not) to interview had no effect on their eligibility for any government benefits.

2.7 Statistical Methods

2.7.1 Primary Analysis

The study size was chosen to be able to detect differences in child labor between those receiving KASAMA and those who do not in a simple comparison of means. The sample includes all children aged 10-17 at the time of the endline survey. This comparison of means can be written in regression form as:

$$(3) y_{i,j,k,t} = \beta_0 + \beta_1 D_k + \varepsilon_{it}$$

where $y_{i,j,k,t}$ is the outcome for child i in family j associated with community k at time t . D_k is an indicator that the child lives in a community receiving a KASAMA treatment. Our analysis will focus largely on $t=1$, the endline survey, ε_i is a mean zero error term.

We also consider the outcomes necessary to test our four main hypotheses as described in the RCT Methodology section. When y is child labor, β_0 is mean prevalence of child labor in the control group. $\beta_0 + \beta_1$ is mean prevalence of child labor for children living in treated, KASAMA, families.

Baseline data allows us to further reduce variance in (2) and more precisely estimate the impact of KASAMA treatment on child labor (or other outcomes in the household). Specifically, we modify (2) as:

$$(4) y_{i,j,k,1} = \beta_0 + \beta_1 D_k + \pi_1 ST_i + \pi_2 A_{i,t=0} + \pi_3 (A_{i,t=0} * F_i) + \alpha y_{i,j,k,t=0} + \varepsilon_{k1}$$

where $y_{i,j,k,t}$ is the outcome such as child labor for child i in family j associated with community k at time t , $t \in \{1,2\}$. $y_{i,j,k,t=0}$ is the value of the outcome variable at baseline. Its inclusion means that we identify the impact of D based on changes in y between the baseline period and the endline period. Because we are now including a control variable from the baseline survey, the sample now includes all children aged 12-17 that were interviewed during both the baseline and endline surveys. We omit those aged 10 and 11 at endline because they were not surveyed during the baseline survey since they were only aged 8 and 9, and thus outside our sampling frame at baseline.

We also include a vector of dummies ST_i to denote each strata. Even within each strata, we have strong priors that outcomes are highly correlated with gender and age. To incorporate that in our specification, we include dummies for age at baseline, $A_{i,t=0}$ and include age-gender interaction terms ($A_{i,t=0} * F_i$) as a control for all the outcomes that we consider. We also cluster errors at the community level for in each time period.

2.7.2 Subgroup Analysis

In addition to estimating the impact of the KASAMA treatment separately by whether the child is a child laborer at baseline, we can test for heterogeneity of the KASAMA treatment across subgroups. Our empirical approach follows the approach described in the previous section separately for each subgroup. In our analysis of the baseline data, we identified three classes of subgroups that would be examined in our study and evaluated the validity of the randomization

within each subgroup. In what follows, we briefly summarize the rationale for the subgroup analysis that appeared feasible in the baseline data.

2.7.2.1 Stratification Characteristics

Randomization was stratified by whether a barangay is rural or urban and whether all 14 surveyed households in the barangay received 4Ps or not. We might expect differences in treatment effects by urbanity because of differences in the local economic environment.

The 4Ps stratification is motivated by the view that the impact of KASAMA on top of 4Ps might differ than when it is not. However, we worry about selection into 4Ps, so we stratified the sample based on whether all eligible 4Ps households in a community report receiving 4Ps. Foremost, 4Ps provides consumption support to poor households. In addition, beneficiaries receive:

- **Health:** All beneficiaries receive free PhilHealth under the National Health Insurance Program. In addition to PhilHealth, households receive a number of other health services. Children under 5 get regular preventive health check-ups, vaccines, and monitoring. Pregnant women get pre-natal care and post-natal care provided by the Department of Health. Children aged 6-14 get deworming pills.
- **Life Skills:** Parents receive monthly family development sessions with topics including effective parenting, husband and wife relationships, child development, and home management.
- **Job Skills:** Beneficiaries may receive employment facilitation or microenterprise development training (separate from the training in our intervention).
- **Financial access:** Beneficiaries receive grants every two months through Land Bank cash cards or conduits authorized by the Land Bank.

Together, this set of program components appears similar to an ultra-poor graduation program (Banerjee et al., 2016). Thus, the impact of KASAMA on top of 4Ps has the interpretation of being the impact of an asset transfer on top of consumption support and relevant to the UPG literature. We also suspect that the impact of an asset transfer is different when families have the food security the consumption support provides.

2.7.2.2 Demographics

Demographic subgroups are based on the child's gender, age, if the child is the firstborn, and number of children in the household. Gender differences may arise because of differences in the treatment of boys and girls or their baseline time allocation. For heterogeneity by age, we examine treatment effects for children 10-12 at baseline compared to children 13-15. We interviewed children at baseline and endline that were 10-17 years old. We chose age 10 as the starting age because of the difficulties in interviewing younger children. On average there are two years between baseline and endline. Hence, children who are above 15 at baseline are above 17 at endline and no longer considered children. Thus, we focused on children 10-15 at baseline. We split children 10-15 at age 13, because minimum working age laws in the Philippines treat children age 15 and above differently than children age 14 and below. Children age 13 at baseline will hence have different applicable child labor laws at endline than children 10-12 at baseline (and thus 12-14 at endline).

Differences in treatment effects by age may arise because of differences in time allocation by age and because there are different sets of criteria under the Philippine definition of child labor that are applied to these two ages. Heterogeneity by if the child is firstborn may arise because firstborn children may have certain traditional responsibilities (especially girls). Finally, we expect heterogeneity by the number of children under age 18 because of differences in the available labor in the household, in the number of activities in the household, and in the value of the resource transfer on a per capita basis.

2.7.2.3 Household and Barangay Characteristics

We examine the impact of KASAMA for agricultural versus non-agricultural households; whether the household has a non-agricultural business; the presence of child labor in the household; the presence of hazardous child labor in the household; whether a child participated in child labor at baseline; whether the household reports having savings; whether the household has loans; whether the household experienced a shock in the past 12 months;¹⁴ whether the household has experienced an illness such that a prime-aged adult had to miss work or school in the past week; whether the household receives 4Ps benefits; whether the household is food secure; whether any prime working aged adults (ages 25-50) in the household are engaged in wage employment; the presence of export agriculture in the barangay; and the presence of inland fishing, an industry with prevalent child labor,¹⁵ in the barangay. In all of the household and barangay subgroups, the F-tests of joint significance indicate that comparisons of treatment and control within subgroup are feasible.

2.7.3 Qualitative Analysis

To complement the randomized controlled trial evaluation of DOLE's KASAMA Program, Innovations for Poverty Action (IPA) also included a qualitative component. The purpose of this exercise is to gain more insight into beneficiaries' experience with KASAMA to assist in explaining and interpreting the findings of a study that is primarily quantitative in nature. In addition, the results of the qualitative component can be utilized while disseminating the study's findings; although quantifying the program's impact is critical for any cost-effectiveness analysis, personal stories of the impact the program has on beneficiaries are often more salient than numbers alone and can allow for a more effective dissemination strategy.

In order to carry out this research, the team's Field Manager, under the oversight of the Research Associate, conducted semi-structured interviews with select KASAMA implementers and beneficiaries. Unlike the structured questionnaires used during the baseline and endline surveys, the semi-structured interviews were conducted with a more open framework to allow for

¹⁴ A household experienced a shock in the past 12 months if a household member died, experienced grave illness requiring hospitalization, experienced a loss of employment or business failure, experienced any loss due to natural disasters or fire, experienced harvest failure, or experienced displacement.

¹⁵ U.S. Department of Labor. 2017. "Findings on the Worst Forms of Child Labor." Retrieved from <https://www.dol.gov/sites/default/files/documents/ilab/ChildLaborReport.pdf>. The research team evaluated whether it would be feasible to look at heterogeneity in the impact of KASAMA in locations with other industries found in the Trade and Development Act report as industries where child labor is known to be prevalent. Inland fishing was the only industry where the randomization looked valid within geographic areas where the industry with child labor is concentrated. The difference with inland fishing that makes it possible to look at the impact of KASAMA is that inland fishing is widespread. In industries with a heavy geographic concentration, we are unlikely to have comparable treatment and control communities. This is discussed fully in the baseline report for this project.

focused, conversational, two-way communication with key informants. The Field Manager had a list of questions to help guide the interview, helping keep the interview focused while not being constrained to any particularly rigid format.

There are comparative advantages to using semi-structured interviews to complement structured interviews typically used in quantitative research. First, using an open framework can help provide new perspectives of ways the intervention is experienced. Also, it can be easier to build rapport with the respondent given that the nature of the interview allows more freedom to express views in their own terms. Thus, such interviews may allow respondents to more easily discuss sensitive issues and in more depth.

As with interviews during the baseline and endline surveys, all information is kept confidential and complies with Institutional Review Board (IRB) protocols. No personally identifiable information is attached to any of the data collected.

2.8 Data Quality

2.8.1 Piloting

The questionnaires were extensively piloted and refined in preparation for each survey round. During the pilots, we interviewed non-sample households that resembled our sample households (most were KASAMA beneficiaries) in both rural and urban areas. The endline instruments were piloted in mid-December 2017 in Lian, Batangas and again in mid-January 2018 in Quezon City, National Capital Region. The first endline pilot involved testing all modules of the endline household and child questionnaires with a particular focus on the economic activity module, and the second pilot tested the variance of the list randomization questions.

Regarding the economic activities module, the research team wanted to ensure all economic activities during the last twelve months were captured, especially small, informal activities and temporary activities that could be subject to recall bias. The team experimented with several versions of this module, including a "calendar screener" where the 12-month recall period was broken down into four time periods (early/late wet and dry seasons) and a "list screener" where we asked whether an exhaustive list of economic activities were conducted in the past twelve months. The final module involved a variation of these two strategies: we broke down the recall period into the wet and dry (translated as "non-wet") seasons and included follow-up questions to capture any specific category of activities the respondent may have forgotten about (e.g. typical intermittent activities like casual labor, street vending, handicrafts, etc.; fishing, farming, livestock, and bird-related activities; scavenging, foraging, and collection activities; production activities intended for the household's own consumption; and renting machinery). Moreover, we included reminders for the respondent to report both employment and self-employment activities, activities where the product was either intended for sale or consumption, and activities conducted by household members other than the respondent. We back-checked these questions (see Section 2.8.2) and found our measures to be stable.

2.8.2 Audits

To ensure the enumerators' quality of work and the robustness of the data, 15-minute field audit interviews were conducted by auditors for 18 percent of endline surveys.¹⁶ We stratified which interviews were audited by enumerators to ensure all staff were properly covered. We also audited more aggressively during the beginning of the survey, though the audits were conducted throughout in an effort to combat survey fatigue.

The audit questionnaire included portions of the survey that were re-asked to test the stability of the outcome variables in addition to checking enumerator performance. Questions used to gauge enumerator performance were questions that were unlikely to change between the time of the original survey and the survey audit, such as demographics. We also audited the economic activity module, since this is a key outcome for the evaluation of KASAMA.

In addition to audits, 9.2 percent of endline surveys were accompanied by senior field staff, with accompaniments more prevalent earlier in the project.

2.8.3 Frequency Checks

The Research Associate prepared a Stata .do file during pilot testing of each survey round that allowed him to conduct frequency checks of the data from the outset. Frequency checks are designed to identify issues in survey programming, spot distribution of variable responses, evaluate if intervals and responses need to be adjusted, ensure that household and child surveys are properly matched, and track enumerator performance.

The Research Associate processed and reviewed incoming data on a daily basis and identified any potential problems. Enumerators were consulted immediately about any questionable data, and call backs were conducted where necessary.

2.8.4 Respondent Tracking and Attrition

Subjects were tracked through two primary mechanisms. First, during both the baseline and midline survey, we asked numerous questions to collect data to assist with tracking, such as mobile and landline numbers. Enumerators also recorded the GPS coordinates of each household. We also collected data on the two best people to contact should the respondent move from their current home and need to be contacted in the future. For these two individuals, we collected data on the address and phone numbers of these individuals as well as social media information.

Second, during the baseline survey, it became apparent that our sample population was mobile. As a result, we added the midline survey, with the primary purposes of 1.) tracking respondents part way through the study and 2.) validating treatment receipt. We tracked all 2,296 households, including migrant households, in the midline survey and were able to re-interview 2,285 of the 2,296 households. Of the households that were not surveyed at midline, 10 were unable to be located and 1 refused to answer the survey.

¹⁶ In the EDP, we indicated that we would audit at least 10 percent of households.

For our endline survey, we tracked all migrant households and all children who were present at baseline (age 10-17 at baseline) and still under age 18 at endline regardless of whether they were still associated with the original household. For children that had moved from the baseline household, we collect detailed contact and location information during the endline household interview in an attempt to track and interview all children. We eventually terminated endline data collection when enumerators felt that no additional children could be located. For many of these children that we were not successful in interviewing directly, we have secondary information on them from the endline household survey, which we can use to test the robustness of our results.

Rates of attrition for both households and children are shown in Table 1. The low household attrition rate is an accomplishment. Only 8 households were lost in the two years between baseline and endline. This 0.3 percent attrition rate is extremely low. Four of the households are treatment, so attrition at the household level is perfectly balanced and thus does not impact inference.

Our key study subjects are adolescents, and adolescence is the transition between childhood and adulthood. As such, it is a mobile population, moving for a wide range of reasons such as work, school, marriage, and adventure. We spent nearly a month of work trying to track down migrant children using the information available to us. In the end, we were able to recapture 96.3% of children age 10 and above at baseline and age below 18 at endline. These age ranges were chosen as a focus, because of the difficulty of asking questions directly to children below age 10 and the fact that those 18 and older at endline are no longer children. The probability of not finding a child is increasing in the child's age, but overall a 3.7 percent attrition rate on adolescents is much better than anticipated.

Table 1: Attrition Rate

	Number interviewed at baseline	Number interviewed at endline	Rate of attrition
Households	2,296	2,288	0.3%
Panel children	3,502	3,374	3.7%

Panel children interviewed at baseline are all children age 10-15 at baseline that completed the Baseline Child Survey.

Panel Children interviewed at endline are all children age 12-17 at endline that completed both the Baseline and Endline Child Surveys.

3. Results

3.1 Participant Flow

3.1.1 Overview

Consort 2010 Flow Diagram for Study Households

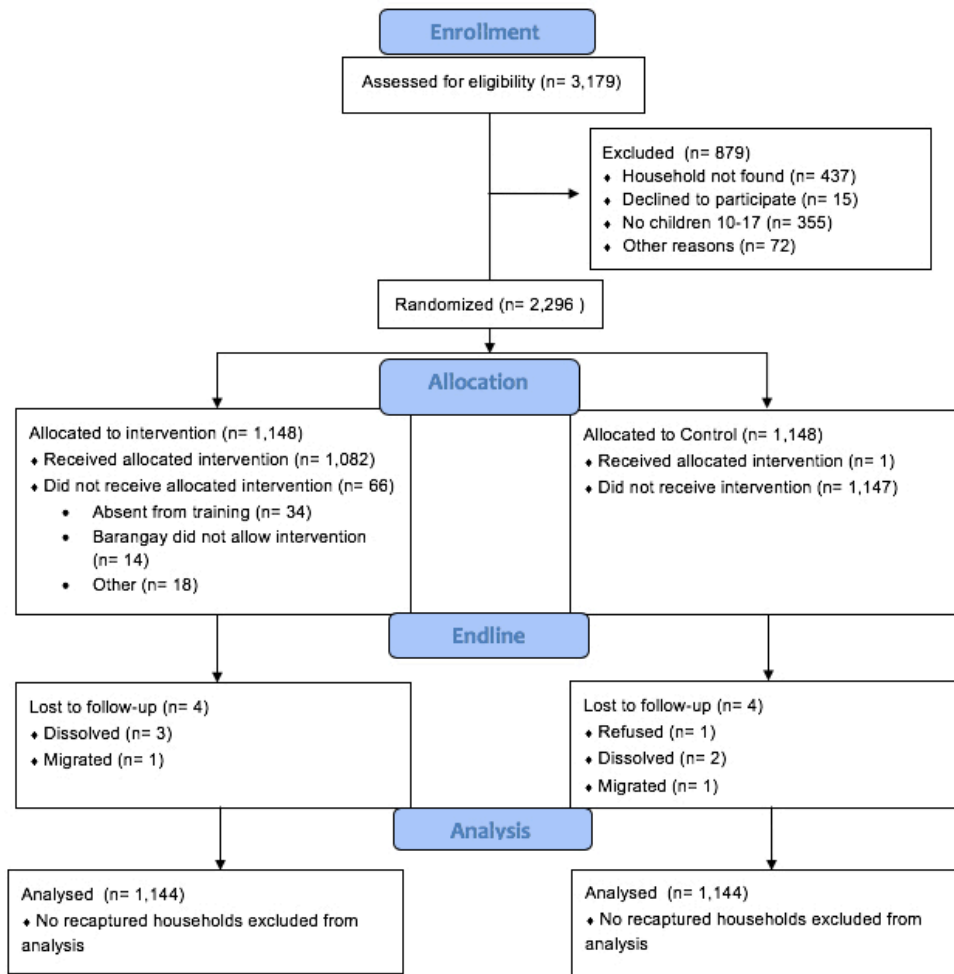

Figure 2: Flow diagram for study households

3.1.2 Noncompliance

In accordance with the Memorandum of Understanding between IPA and DOLE, the regional offices sent the research team regular reports on disbursement of KASAMA benefits that enabled us to monitor whether treated beneficiaries received benefits and ensure that control barangays were not treated. DOLE's normal monitoring process was inadequate for the needs of the evaluation's compliance monitoring, as it does not breakdown asset rollout, training details, and timing by household. For this reason, IPA designed an attendance sheet that was administered by DOLE and filled out during KASAMA activities. Most importantly, this document allowed IPA to monitor delivery of assets and trainings to treatment households by date. We also included questions in the midline and endline questionnaires to gauge compliance with the randomization. Thus, we have both DOLE and self-reported measures of compliance.

Table 2 describes compliance with the randomization. Of the 1,148 households to be treated, 1,007, or 88%, reported receiving KASAMA when asked during a survey module that covered a variety of government benefits. This is slightly below DOLE records which show that 94% of treated subjects received treatment. However, we do not expect the DOLE lists and self-reports to be the same because 1.) when interviewing the household, we are not necessarily interviewing the KASAMA beneficiary and 2.) the saliency of support might fade overtime. Thus, we regard this a close correspondence, and we have no reason to believe that the difference between the self-reports and the DOLE reports reflects anything other than measurement error.

Table 2: Compliance with treatment groups

	Total number of households	Number receiving treatment	Percent of households treated
Treatment (self-report)	1,148	1,007	87.7%
Treatment (DOLE report)	1,148	1,082	94.3%
Control (self-report)	1,148	38	3.3%
Control (DOLE report)	1,148	1	0.1%

A household self-reports receiving treatment if it answers yes to having received KASAMA in the last 12 months, either in the Midline or Endline Survey. For DOLE reported treatment, we use the monitoring sheets provided by DOLE.

Why did 66 treated households fail to receive productive assets? 34 did not appear at the first training where the program was described and beneficiaries completed the necessary business plan proposals to be submitted to the regional office. Our records suggest that they were contacted for the first training, but it is possible that there was error in that contact rather than this being a household choice. In one municipality, the mayor refused to allow KASAMA, fearful of being labeled as a municipality with child labor. This municipality had one treatment barangay, and thus 14 treatment households were excluded from KASAMA. Among the remaining 18 households, reported reasons for non-compliance include lack of interest from the household, too busy, difficulty getting transportation to the training site, and lack of capacity to manage a business.

In the control group, 38 households reported receiving KASAMA while DOLE's records list one household. The 38 household reports are spread out across barangays. Hence, we do not believe that they reflect errors in implementing the intervention. There are fixed costs associated with setting up in a barangay to provide benefits, and we do not believe we would see the geographic spread we observe if the 38 households were actually treated. More likely, there is some confusion among these 38 control households about what government programs they have interacted with. The one household on the DOLE list received benefits through a related livelihood program, not KASAMA, but it is close enough to KASAMA in benefits that we feel it should be classified as a compliance failure.

3.1.3 Timeline

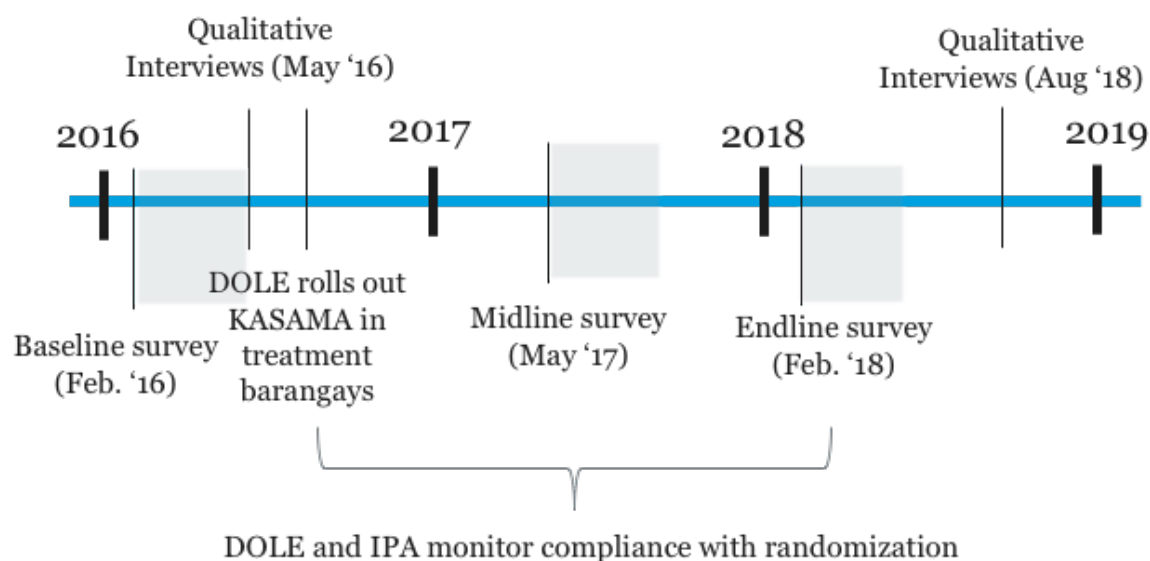

Figure 3: Data collection timeline

3.2 Baseline Data

3.2.1 Balance

The purpose of conducting balance tests is to demonstrate that the randomization is balanced on key observable variables. In other words, it shows that, on average, the treatment and control groups are statistically identical at the baseline. This is done by looking at the difference in means between variables across treatment and control groups; if there is no statistically significant difference, then balance on such observable characteristics was achieved.

Table 3 shows the average values across treatment and controls groups of key child-level, household-level, and barangay-level characteristics, respectively. The table is organized as follows; after the variable is defined, the first column contains the mean of the variable for the treatment group with its standard deviation in parenthesis. The second column is the mean and standard deviation of the variable for the control group. The third column is the difference between the treatment and control means along with the standard errors of the difference in brackets.

We test balance on the full sample of resident children 10-17, because the children 10-15 were under 17 at endline and thereby the target of our endline analysis and children 16-17 at baseline, though aged out of our endline analysis, provide insights on what the experience of 16 and 17 year-olds looks like in our communities.

Table 3 shows that the treatment and control barangays are balanced across child, household, and barangay populations at baseline. There is not a statistically significant difference between any of the baseline variables. The difference in income between treatment and control appears large in magnitude despite its insignificance. This is driven by an outlier. If we trim the top and bottom 1

percent, the difference moves from the treatment being more than 70 percent above control to being less than 2 percent below control. Further, even with the outlier included, we fail to reject the null hypothesis that these characteristics are jointly the same across the treatment and control groups (F-statistic=0.60). Most balance variables included in the table are self-explanatory, but those that require construction such as child labor, hazardous child labor, family firm annual income, and per capita monthly expenditures are defined in detail in Appendix C.

Table 3: Balance on baseline variables

Variable	Treatment Mean	Control Mean	Difference
Age of child	13.32 (2.18)	13.26 (2.22)	0.06 (0.06)
Child is female	0.46 (0.50)	0.47 (0.50)	-0.00 (0.01)
School attendance rate of child over last 7 days	0.47 (0.46)	0.45 (0.46)	0.02 (0.05)
Child is grade(s) behind	0.04 (0.19)	0.04 (0.19)	-0.00 (0.01)
Child is economically active in last 7 days	0.84 (0.37)	0.81 (0.39)	0.03 (0.02)
Child is in child labor in last 12 months	0.73 (0.45)	0.74 (0.44)	-0.01 (0.02)
Child is in hazardous child labor in last 12 months	0.44 (0.50)	0.45 (0.50)	-0.01 (0.03)
Child works for pay in last 7 days	0.15 (0.36)	0.16 (0.37)	-0.01 (0.02)
Household survey respondent is female	0.81 (0.39)	0.82 (0.39)	-0.01 (0.02)
Household size	6.78 (2.21)	6.93 (2.28)	-0.15 (0.15)
Household receives government transfers other than 4Ps or KASAMA in last 12 months	0.07 (0.25)	0.07 (0.25)	0.00 (0.01)
Household reports family firm in last 12 months	0.63 (0.48)	0.61 (0.49)	0.02 (0.04)
Family firm generated income in last 12 months (PPP adjusted)	662.55 (3297.35)	384.73 (15217.87)	277.82 (386.84)
Food expenditure as a share of non-durable expenditure in past 30 days	0.64 (0.15)	0.64 (0.15)	-0.00 (0.01)
ln(PPP adjusted USD household total monthly per capita expenditure)	4.30 (0.55)	4.29 (0.61)	0.01 (0.04)
Household has savings	0.34 (0.47)	0.34 (0.47)	0.00 (0.03)
Household has loans	0.78 (0.41)	0.78 (0.42)	0.01 (0.02)
Household had a shock in last 12 months	0.64 (0.48)	0.65 (0.48)	-0.01 (0.03)
Household had an illness in past 30 days	0.20	0.19	0.01

	(0.40)	(0.39)	(0.02)
Household has outmigrants in last 24 months	0.17	0.19	-0.02
	(0.38)	(0.39)	(0.02)
Barangay population (2010 Census)	3,675	3,428	246
	(3,567)	(3,777)	(574)
Food Security Index	-0.02	-0.01	-0.01
	(0.44)	(0.46)	(0.03)
Observations	2156	2148	4304
F-statistic on test of joint significance			0.65
p-value on test of joint significance			0.880

The sample includes all children 10-17 interviewed in the baseline child survey. Columns 1 and 2 report the mean of the variable for the treatment and control groups respectively. Column 3 reports the difference (Column 1 - Column 2). Standard errors are in parentheses. The final two rows of the table report the omnibus F-test of the joint significance of all the differences in the column above and the associated p-value. Indices are created following Anderson (2008)'s approach. The standard deviation of an index created is not mechanically 1 because of weighting by the inverse of the covariance matrix in index construction.

***p<0.01, **p<0.05, *p<0.10.

3.2.2 Balance among subgroups

In addition to estimating the impact of the KASAMA treatment on the outcomes discussed in Section 2.4.4, we test for heterogeneity of the treatment across subgroups as outlined in Section 2.7.2. Because randomization is at the community level, we cannot stratify rollout by child or household characteristics. Thus, the validity of our subgroup comparisons depends on fortune and requires the evaluation of balance using the baseline data. We present balance tables for each of these subgroups in Section 3.6.

We built two types of heterogeneity into the experiment design. All communities were divided into urban and rural areas. They were also divided into whether all households in our study were receiving the government's consumption support program 4Ps. Interacted, every community was then assigned to one of four stratum, and randomization was conducted by the authors within each stratum. Thus, we can test for differences in the effect of KASAMA between urban and rural areas as well as between areas with complete 4Ps rollout and those without complete rollout. Section 3.6 also presents balance tables for these subgroups.

Based on the tests of balance and joint significance shown in Appendix D, the data do not present any reason to be concerned about looking at treatment effect differences within either the stratification subgroups or the child and household subgroups.

3.3 Program implementation

3.3.1 Rollout

Asset rollout began on August 21, 2016 and was completed on February 6, 2018. Figure 3 shows the cumulative distribution function of household asset receipt by rollout date. Approximately

50% of households received the asset within the first 6 months of rollout, and 78% received the asset within the first year.

Figure 4: Asset rollout by household

Of the 1,148 households in the treatment group, 1,082 households (94.3%) received an asset according to DOLE's reports. 66 households did not receive treatment for reasons discussed in Section 3.1.2.

The December 2017 Monitoring Report considers variation in the timing of rollout in greater detail. The delays in rollout are principally a barangay characteristic and are not driven by substantive heterogeneity in implementation within a barangay. DOLE described difficulties related to procurement as the main driver behind delays in implementation. In fact, implementation took the longest in Region 3 where the LGU was responsible for procurement and distribution unlike the rest of our study area where DOLE directly administered. We did not find any association between the timing of rollout and violence or unrest.

Nonetheless, the Monitoring Report concluded that it would be sensible to examine whether our treatment effect estimates vary with time since implementation by comparing barangays receiving assets before the median and after the median asset distribution date. While this comparison of pre-and post-median does not use all the variation in rollout dates, we found that it appears to preserve the validity of the randomization and hence should be informative if we find dramatically different results above and below the median periods. That said, we do not anticipate seeing differences in treatment effects across early and late barangays.

In the Monitoring Report, we concluded that delays in implementation should be of little consequence to our analysis. A review of related literature in that report concluded that the evidence from other contexts supports the idea that the impact of sustainable livelihood programs should not vary across the time differences we are observing here. Although good evidence for differences in outcomes for short time intervals does not exist, evidence exists for the persistence of enterprises across years. Bandiera et al. (2016) evaluate BRAC's Targeting the Ultra-Poor graduation program. They find that the value of business assets generally persists or increases across time. Similar results were found in Banerjee et al. (2016). The authors evaluate Bandhan's "Targeting the Hard Core Poor program", and likewise find evidence that enterprises persist 18 months (endline 1), 30 months (endline 2), and 7 years (endline 3) after program completion. This suggests that the presence of enterprises owned by the beneficiaries of sustainable livelihood programs does not vary substantially across time. Nevertheless, in Section 3.5.3, we examine potential heterogeneity of the effects by rollout timing.

3.3.2 Asset distribution

The monitoring reports received from DOLE included the type of asset received by each treatment household. This enables us to examine the types of activities undertaken by KASAMA beneficiaries through the program. Table 4 lists the assets received under KASAMA and the percent of treatment households receiving each asset type.

Column 1 contains the distribution of assets among the full treatment population. 31 percent of beneficiaries receive assets related to sari-sari stores, or neighborhood sundry stores. This might include inputs to start a new sari-sari or to expand an existing sari-sari. Food vending is even more common with 13 percent in rice vending and 24 percent in other food vending (including those that vend food and load phones). Altogether, 68 percent of assets distributed went to these types of petty retail. Inputs into fishing and other types of tools and equipment are the next largest category with a combined 20 percent of assets distributed. The remaining columns of Table 4 tabulate assets distributions in other sub-categories of the population that will be discussed below.

Table 4: Assets distributed, by baseline household characteristics (% of total)

		Child is Engaged in Child Labor		Households Receiving 4Ps in the Barangay		Presence of Non- Farm Enterprise in the Household		Illness of Prime Age Adult	
	Full Sample	No Child Labor	Child Labor	Incomplete 4Ps	Complete 4Ps	No Enterprise	Enterprise	No Illness	Illness
Sari-Sari Store	31.12	30.91	31.20	22.23	44.96	32.30	27.37	32.11	27.07
Rice Vending	12.70	15.27	11.75	13.50	11.46	15.34	4.32	13.24	10.53
Other Food Vending	23.34	21.45	24.04	25.30	20.28	23.37	23.25	23.04	24.56
Food Vending and Phone Loading	0.69	1.09	0.54	0.08	1.64	0.91	0.00	0.74	0.50
Fishing	6.94	6.00	7.29	8.41	4.66	7.06	6.58	7.29	5.51
Welding	0.64	1.27	0.41	0.73	0.50	0.32	1.65	0.67	0.50
Carpentry/Construction	1.82	1.64	1.89	2.43	0.88	1.88	1.65	1.41	3.51
Beauty/Barber Service	0.39	0.55	0.34	0.49	0.25	0.39	0.41	0.37	0.50
Livestock Raising	1.82	1.45	1.96	2.18	1.26	2.39	0.00	1.84	1.75

Livestock Related Retail Products	0.34	0.36	0.34	0.40	0.25	0.45	0.00	0.37	0.25
Farming	1.72	1.82	1.69	2.67	0.25	2.20	0.21	1.53	2.51
Sewing/Tailoring	2.17	3.64	1.62	2.51	1.64	2.46	1.23	2.08	2.51
Automotive Related Repairs	0.25	0.36	0.20	0.16	0.38	0.32	0.00	0.25	0.25
Vehicle Driving	1.03	1.09	1.01	1.46	0.38	0.84	1.65	0.86	1.75
Laundry	0.10	0.18	0.07	0.16	0.00	0.13	0.00	0.06	0.25
Retail Wear	0.74	1.27	0.54	0.65	0.88	0.91	0.21	0.74	0.75
Tools and Equipment	13.54	10.55	14.65	15.93	9.82	8.09	30.86	12.75	16.79
Other	0.64	1.09	0.47	0.73	0.50	0.65	0.62	0.67	0.50
Observations	2,031	550	1,481	1,237	794	1,545	486	1,632	399

The unit of observation is a child aged 10-17, interviewed in the baseline child survey. Assets distributed according to monitoring conducted by DOLE. "Other" assets are Ambulant Vendor, Paint Shop, Phone Loading, and Kits.

3.3.3 Qualitative findings on program implementation

Enrollment in KASAMA begins with an invitation to households to attend a local meeting hosted by DOLE. In our qualitative work with past beneficiaries conducted in 2016 and again with sample treatment households in 2018, beneficiaries reported not knowing the reason for this meeting when they were asked to attend and being surprised at the offer to provide them with a productive asset. Beneficiaries were not certain why they were chosen for KASAMA, but several remarked on their economic circumstances and something about their children. In response to a direct question, no families felt that their eligibility for KASAMA was driven by the presence of child labor in their household.

While all respondents in our qualitative work reported having chosen the asset they received, several remarked that they were told that they were not able to get their first choice of assets. In every case where this was mentioned in our qualitative work, the respondent's first choice were pigs, and the respondent was either discouraged about operating a piggery (e.g. because it is a risky endeavor) or told that pigs could not be acquired following procurement rules (i.e. DOLE or the ACP could not find a formal supplier that could provide an original receipt). Most respondents reported that they would chose a different asset if they were to receive KASAMA assistance again, claiming they now had a better understanding of the market and the risks involved after their initial experience.

When asked about the value of the KASAMA transfers in our qualitative work, the PHP 10,000 figure clearly had saliency as all subjects repeated that number back in the interview. Some remarked that the market value of the goods they received was below that, because the government's procurement procedure led the benefit provider to have to use a higher cost source than the beneficiary could use. We did not encounter skepticism among beneficiaries that PHP10,000 was spent although one beneficiary reported that a small portion of the money was used to buy accident insurance, which the DOLE reports verify.

The training component of the intervention clearly lacked saliency as we heard a lot of different reports about its content and how often they occurred. It appears that the first training day was typically combined with informing beneficiaries of their eligibility for the program and helping

them, at that time, select the asset for transfer. This was confirmed during a meeting with the regional focal persons.

In discussing the training with beneficiaries, most remarked that it was about bookkeeping and accounting. Beneficiaries reported that they did not have the time to use the bookkeeping procedures that they were taught although reported that they felt they should use them. Only one of our interviewees seemed to have a reckoning of their business operation that seemed consistent with bookkeeping, although she appeared to have that level of detail stored entirely in her (impressive) head and could not provide written records when asked.

There was one community where all beneficiaries remarked that the child labor training had occurred. Given that in all our qualitative interviews, we encountered only one person outside of this community that ever mentioned hearing about anything related to child labor in KASAMA, the contrast was striking. It appears that the reason for child labor's saliency in this one community is that the community had recently gone through 4Ps child labor training. We cannot say whether the 4Ps training on child labor increased the KASAMA's training saliency or if beneficiaries were just confusing the two trainings, although we suspect it is the latter.

3.4 Outcomes

In the empirical methods discussed above in section 2.7.1, we highlighted two results that will be reported for every outcome: a simple intent to treat result that uses only the endline data and controls for stratification (Column 2 in the tables below) and a result that controls for baseline values of the outcome and hence is limited to panel adolescents who are observed in both endline and baseline (Column 4 in the tables below). The simple intent to treat results estimate the effect of the treatment at endline for all children observed at endline, and thus includes children who were not observed at baseline either because they were not old enough to be interviewed at baseline or because they migrated into the household between the baseline and endline surveys. The panel results examine the effect of treatment for just those children that were part of the household at baseline (ie., prior to treatment), and are observed again two years later. Unlike the simple intent to treat results, these results do not include child migrants into the household or children who were 10 and 11 years old at endline and thus not interviewed directly at baseline.

In order to determine whether changes in results owe to the selection into the panel or the inclusion of the baseline controls, we also report the intent to treat results for the panel adolescents, controlling only for stratification (Column 3). When we partition the sample by baseline characteristics, the analysis is limited only to panel adolescents, and there is no column that uses endline children only. In the executive summary and in our discussion below, our attention focuses on the results that control only for stratification, and the panel results are discussed only when they yield meaningful changes in findings. Given that we have balance across the treatment and control groups, this comparison of means is the simplest way to present our results. A change in finding is defined as meaningful if the panel result that controls for baseline outcomes is not within a 95 percent confidence interval of the endline result.

3.4.1 Hypothesis 1 Related Findings

Table 5 provides clear evidence of an impact of KASAMA on the economic organization of the household.

Table 5: Effect of KASAMA on the economic organization of the household (Hypothesis 1)

	Endline Co-resident Children		Endline and Baseline Data Panel Children	
	Control Mean (1)	Intent to Treat (2)	Intent to Treat (3)	Intent to Treat (4)
Household reports receiving KASAMA	0.037 (0.188)	0.839*** (0.020)	0.834*** (0.021)	0.833*** (0.021)
Household reports agricultural or non-agricultural family firm	0.768 (0.422)	0.087*** (0.022)	0.096*** (0.022)	0.095*** (0.023)
Family firm generated income	5,261 (5,798)	580.577* (300.629)	491.603 (297.327)	478.312 (295.914)
Number of non-farm enterprises	1.251 (1.401)	0.364*** (0.091)	0.387*** (0.090)	0.382*** (0.092)

Remittance income	421 (1,944)	-3.804 (84.517)	3.861 (91.886)	-2.528 (88.113)
Stratum Fixed Effects		Yes	Yes	Yes
Baseline Controls		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1 and 2, and a child 12-17 observed in both baseline and endline in Columns 3 and 4. Each outcome is a characteristic of the household the child was assigned to at baseline. Column 1 contains the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4 reports the coefficient on an indicator that the child is associated with a household in a community randomly assigned to receive KASAMA. For column 2, this means the child at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3 and 4, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and the baseline value of the row variable except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

First, we find that assignment to treatment appears to predict program participation. In our control sample, 3.7 percent of households report receiving KASAMA. This likely reflects measurement error, although a few may have received benefits that they believed to be KASAMA. 87.6 percent of treatment households report receiving KASAMA.

This evidence that the program occurred also appears in indicators of the presence of family firms. Treatment households are 8.7 percentage points more likely to report the presence of either an agricultural or non-agricultural family firm, an 11 percent increase over control households. This increased probability of having a family firm also increases the presence of family firms in households that already had them. We find an additional 0.36 non-farm

enterprises operating (a 29 percent increase over control) and an additional 0.26 new non-farm enterprises over the study period (a 61 percent increase over control). We also observe increases in livestock and farmland although those increases are not statistically significant.

It is worth emphasizing that the new enterprises are not necessarily directly related to the asset transfer. In our qualitative work, we encountered many subjects who received assets in one business and then bought and sold several times to find the business that worked best for the subject. One might start with rice vending, move to operating a sari-sari, then start a piggery, all from the initial seed.

Overall, we observe an increase in family firm income. There are substantive challenges in measuring income in a very poor population such as lack of financial literacy, lack of bookkeeping skills, and difficulty with recall, and these challenges add a lot of imprecision and measurement error. Nonetheless, we detect an increase in family firm income of 11 percent. That increase in family firm income does not appear to be offset by declines in remittances into the household. The decline in remittances is insignificant and less than a percent of the increase in income associated with treatment.

Based on this increase in family firm income, we can calculate the rate of return to the PHP 10,000 investment made through KASAMA. In Table 5, treatment is associated with an additional USD \$581 per year of family firm generated income. 88 percent of treated households report receiving KASAMA. Accounting for the 12 percent of treatment households that do not report receiving KASAMA, for the average treated recipient KASAMA is associated with an additional \$660 per year in business income. The actual value of KASAMA is \$518, so households appear to have earned a 27 percent rate of return on KASAMA.

There is of course a lot of heterogeneity in rates of return. To graph heterogeneity in rates of return, we need to estimate counterfactual family firm income at the household level in the absence of KASAMA. To do so in a simple, transparent manner, we use the control sample only and regress endline family firm income in the control sample on a polynomial in baseline family firm income and use the estimates from that regression to predict family firm income at endline in the treatment group. The difference between the actual family firm income and this predicted endline family firm income is our estimate of a household's growth income. Dividing that by the value of KASAMA gives us our estimate of the household's rate of return on KASAMA. We graph the distribution of rates of return for treated households in treatment barangays in Figure 5.

Figure 5: Estimated distribution of annual rate of return of KASAMA in family firm income
Note: 1 = 1 percent

We see that a lot of households earn negative returns. Their income is lower than we would expect given baseline family firm income. Positive and negative shocks that are entirely out of the household and the intervention's control can be responsible for the distribution. We have no theory that can guide us as to what we should expect the distribution in Figure 5 to look like. It is clear in the figure that some households realize very large changes in family income over time and some realize negative returns. Thus, while we observe substantive returns on average, that average masks considerable variation.

3.4.2 Hypothesis 2 Related Findings

Table 6 implies that the changes in the household's economic organization are associated with increases in living standards. In particular, we observe statistically significant increases in per capita consumption and food security, and evidence of suggestive increases in food expenditures and the ownership of durable goods, though these are not statistically significant.

Table 6: Effect of KASAMA on the well-being of household's residents (Hypothesis 2)

	Endline Co-resident Children		Endline and Baseline Data Panel Children	
	Control Mean	Intent to Treat	Intent to Treat	Intent to Treat
	(1)	(2)	(3)	(4)
Household per capita consumption	47.238 (62.933)	6.587* (3.844)	6.820 (4.435)	7.437 (4.574)
Total food expenditures	101.561 (63.394)	10.818 (6.903)	11.154 (8.625)	12.201 (9.238)
Food security index	0.002 (0.480)	0.068** (0.028)	0.066** (0.027)	0.072*** (0.025)
School attendance rate	0.446 (0.465)	-0.019 (0.055)	-0.029 (0.057)	-0.033 (0.055)
Value of durable goods	5,471 (7,427)	2,743 (2,152)	3,451 (2,829)	3,352 (2,798)
Child is attending school	0.502 (0.500)	-0.020 (0.061)	-0.029 (0.063)	-0.037 (0.059)
Child is behind grade level	0.325 (0.469)	-0.010 (0.022)	-0.007 (0.026)	-0.012 (0.024)
Stratum Fixed Effects		Yes	Yes	Yes
Baseline Controls		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1 and 2, and a child 12-17 observed in both baseline and endline in Columns 3 and 4. Household PCX and Food Security Index are characteristics of the household the child was assigned to at baseline. Column 1 contains the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4 reports the coefficient on an indicator that the child is associated with a household in a community randomly assigned to receive KASAMA. For column 2, this means the child at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3 and 4, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Change in food security is the most robust of the findings. While total household per capita consumption increases by 14 percent, we observe increases in food security of 0.068 standard deviations in the treatment population relative to the control.

We examine the 13 components of the food security index separately in order to determine what is driving the increases in food security. Figure 6 plots the effect of treatment assignment on food security outcomes and 95% confidence interval bands. All variables are coded so that a positive result represents an improvement in the outcome. As a result, an increase, for instance, in the first outcome shown in the figure ("Adults cut meals") can be interpreted as adults in treatment households are less likely to cut means than in control households.

Notes: Treatment effects with 95% confidence interval.

Figure 6: Impact on food security outcomes

The increases in food security appear to come from improvements in adults and children less than age 14 not cutting meals, the ability to eat preferred food options, and less necessity to borrow food or purchase food on credit. There are no improvements in outcomes such as adults or children going entire days without food. Very few individuals in our sample went entire days without food even prior to the intervention. For instance, 97% and 98% of control households responded that adults and children did not have to go a whole day without food in the past 30 days. Similarly, we do not see improvements in regularly eating two meals, eating until content, or eating meat, fish, or eggs in the past 7 days. The control means for each these variables was between 93% and 99%, and thus there was not much margin for adjustment in response to the treatment.

We cannot say whether the improvements in food security come from the income earned from the asset or from eating the asset. In our qualitative work, we encountered a woman who had been given rice to sell. This rice vendor quickly found herself without rice as neighbors bought from her on credit and did not pay back, and family members also ate the rice.

3.4.3 Hypothesis 3 and 4 Related Findings

While we find changes in how households generate their livelihood with treatment and observe that those changes seem to improve food security, we find less of an impact on child labor. Interestingly, in the qualitative field work, we asked subjects why they received KASAMA. Not a single respondent mentioned the presence of child labor in her house. Thus, it is clear that

subjects were not primed to keep children away from the KASAMA-funded business. In fact, most of the coefficients are positive.

For example, the probability a child is employed in a family-based economic activity increases by 3.6 percentage points or 5 percent. This finding makes sense given the increase in the presence of family-based businesses associated with treatment. In Table 5, we found that KASAMA leads to 0.26 new non-agricultural businesses. If we divide the change in family-based economic activity with a change in treatment status by the change in the number of new non-agricultural businesses with a change in treatment status, we can calculate the change in child participation in family-based economic activity with the addition of a non-agricultural business. This calculation implies that each new non-agricultural business is associated with a 14 percentage point increase in family-based economic activity among adolescents. In table 5, we saw that KASAMA increased the probability that a household reported any farm or non-farm family firm by 8.7 percentage points. Combining this with our child time allocation results in an analogous way to how we computed the impact of adding a new non-agricultural business, adding a family firm to a household without one increases child involvement in family-based economic activity by 41 percentage points (0.036/0.087). The additional involvement in family-based economic activity shows up as slightly more economic activity among children for an additional 1.4 hours per week (11 percent) because we do not see a concurrent decline in other types of work.

Table 7: Effect of KASAMA on child labor-related outcomes (pooled Hypotheses 3 and 4)

	(0.482)	(0.020)	(0.022)	(0.020)
Stratum Fixed Effects		Yes	Yes	Yes
Baseline Controls		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1 and 2, and a child 12-17 observed in both baseline and endline in Columns 3 and 4. Column 1 contains the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4 reports the coefficient on an indicator that the child is associated with a household in a community randomly assigned to receive KASAMA. For column 2, this means the child at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3 and 4, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Hypothesis 3 and 4 posit different effects by child baseline time allocation status. In fact, we see small and insignificant effects of treatment on children involved in child labor at baseline (Table 8). The probability of child labor increases by an insignificant 1 percentage point in a population where the counterfactual rate is 81 percent (19 percent of children engaged in child labor at baseline are not at endline; this can happen even if they keep doing the exact same work but age above the minimum age). The increases in child work appear concentrated in children that were not in child labor at baseline (Table 9). We see a 10 percentage point increase in employment in family-based economic activity, a 16 percent increase. This additional work shows up in economic activity rates, a 9 percentage point increase, and in a statistically insignificant 4 percentage point increase in child labor relative to the control group. That the effects would be largest for children not in child labor at baseline reflects that those not working at baseline are the group most available to take on new work.

In families without a child laborer at baseline, KASAMA increased the number of nonfarm enterprises by 0.39 new non-farm enterprises. Together with the 9 percentage point increase in economic activity, our results imply that a new non-farm enterprise increases economic activity rates by 22 percentage points for each new non-farm enterprise created among children not in child labor at baseline. We also observe a 12 percentage point increase in the presence of any family firm so that adding a family firm to a household without one increases economic activity rates by 71 percentage points. For children in child labor at baseline, our results imply that each new non-farm enterprise increases economic activity rates by 1 percentage point and adding a family firm to a household without one increases economic activity rates by 4.5 percentage points.

Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).			

3.5 Ancillary Analysis and Harms

3.5.1 Adult time allocation related findings

Changes in adult time allocation are informative about hypothesis 1 and help interpret our child time allocation findings as well. We observe changes in adult time allocation that are consistent with our rejection of hypothesis 1 and that are similar to the child time allocation findings.

In table 10, we observe a 7.5 percentage point increase in work in family-based economic activity for prime age adults. This corresponds to a 12 percent increase in family-based economic activity for prime age adults. The associated increase in economic activity is 4 percentage points, and as we observed with children, the increase in economic activity is smaller than the increase in family-based work, implying a substitution away from some outside activities. In Table 10, it appears that this substitution comes from employment outside the family and also from a decrease in migration for employment among prime age adults, although neither finding is statistically significant at 5 percent.

These increases in economic activity among adults are significant in the full sample where the changes in child time allocation were not. Our changes in child time allocation were concentrated in children not involved in child labor at baseline. If we split the adult results based on whether their child was in child labor at baseline (not pictured), we find increases for adults in family-based activity of a similar magnitude regardless of the child's involvement in child labor at baseline.

Table 10: Effect of KASAMA on economic activity of all household members aged 25-50

	Endline		Endline and Baseline Data	
	Co-resident Prime Age Adults		Panel Prime Age Adults

Stratum Fixed Effects	Yes	Yes	Yes
Baseline Controls	No	No	Yes

An observation is an adult 25-50 at endline in Columns 1 and 2, while Columns 3 and 4 include adults 25-50 at endline that are also observed at baseline. Column 1 contains the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4 reports the coefficient on an indicator that the adult is associated with a household in a community randomly assigned to receive KASAMA. For column 2, this means the adult at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3 and 4, this means that the adult at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the adult's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

The increases in economic activity among adults appear to be concentrated in adults who co-reside with children in child labor at baseline. We think the interpretation of this finding is that KASAMA introduces economic activity into a household and absorbs wherever there is slack labor. Children who were not working start. When a child is already working, that induces any remaining adults who are not in the labor force (for whatever reason) to enter. Looking into these increases in adult economic activity further, we find that the results in Table 10 are driven entirely by women, especially young women in peak child bearing ages. Treatment effects on male economic activity are a precise 0. We have also examined (not in the table) how co-resident elderly are impacted and found the largest changes in economic activity rates for elderly women whose economic activity rates increase by 43 percent with treatment. Hence, children not working become more likely to work, but when children are working, women of child-bearing age and elderly women are more likely to be economically active.

3.5.2 Interpretation and Harms

The increases in economic activity among children not in child labor at baseline could have negative welfare consequences for the child through added stressors, interference with schooling, or reductions in free time as well as the hazards associated with work. These potential negative welfare consequences do not seem to be driven by increases in hours worked. Children in child labor at baseline in the control group work an average of 15.6 hours per week, while children not in child labor at baseline work an average of 10.5 hours per week. Neither group experiences a statistically significant treatment in hours worked as a result of the intervention, though the coefficient is positive and represents an increase of approximately 1.4 hours. Thus, the total hours worked post treatment is still below the threshold of 20 hours in unpaid household services suggested by Lyon, Ranzani, and Rosati (2013) where an impact on schooling is likely to be evident. However, there are other dimensions of child well-being, and it is important to consider whether KASAMA impacts the health and psycho-social well-being of children who are not in child labor at baseline.

While we see in section 3.4.2 that KASAMA improves food security and leaves families apparently better off in terms of consumption, we also observe negative, albeit small and insignificant, coefficients on schooling attendance and progression. Hence, the welfare consequences for the adolescent of this additional work associated with KASAMA could move

in a different direction than the household's consumption and food security. To assess this, we have included several measures of psycho-social well-being.

Our primary life satisfaction metric is Cantril's (1965) Ladder which we collect for each child 10-17 in the household. The respondent provides a scaled response of their life quality ranging between 0 to 10, with 0 being the worst possible life they can imagine and 10 being the best possible life they can imagine. We examine the impact of KASAMA on the child's raw reported score and on indicators consistent with how the Gallup Organization uses Cantril's Ladder, creating indicators by splitting the responses into thriving (score of 7 or above) and suffering (score of 4 or below). More details on the construction of these variables can be found in Appendix C4.

Though not explicitly about life satisfaction, we have also collected other data in both survey rounds that is informative about the child's mental state. We have asked enumerators to assess the child's attentiveness, carefulness, engagement, and shyness during the survey experience. We have asked the child about their relationship with their mother and father. We think questions that relate to how much care the child perceives are also useful in assessing the child's well-being. From these questions related to maternal and paternal care, we have added up the child's responses and created a maternal care and a paternal care index.

In the endline, we have added several other measures of psycho-social well-being out of a concern that we would need to examine the well-being consequences in greater detail. We added a module to the household survey to ask caregivers of children 10-17 about the challenges their children face in their day to day lives, specifically the Strength and Difficulties Questionnaire (SDQ) (Goodman 1997). In the child survey, we use the Student Life Satisfaction Scale (Huebner 1991), which is scored by summing up answers to all questions. We added the Center for Epidemiological Studies Depression Scale for Children (Radloff 1977). Finally, we added several questions capturing the child's aspirations for the future which allow us to create indicators for whether the child has short-term goals, long-term goals, and plans to achieve long-term goals.

These findings are in Table 11 for the full sample and Table 12 for the sample split by baseline child labor status. Because all of these child welfare measures are trying to capture the same underlying phenomena, our statistical tests are not independent, and we may find significant effects on some outcomes that are just reflective of the large number of tests we are performing. Hence, we also follow Anderson (2008) and create an index that summarizes all of these child well-being measures. For the Strength and Difficulties Scale outcome and below, we do not have baseline values, and so only control for age and age times gender fixed effects. Because of these additions to the endline survey, the child welfare index differs in content from endline to baseline, but we still think the baseline index is useful and include it in the final column for the first row.

In Table 11, we show results from a number of specifications outlined in Section 2.7.1: a simple intent to treat result that uses only the endline data and controls for stratification (Column 2) and a result that controls for baseline values of the outcome and hence is limited to panel adolescents who are observed in both endline and baseline (Column 4). In order to determine whether

changes in results owe to the selection into the panel or the inclusion of the baseline controls, we also report the intent to treat results for the panel adolescents, controlling only for stratification (Column 3). In Table 12, because we split the sample by a baseline characteristic, only panel children appear in the table. In our discussion below, our attention focuses on the results that control only for stratification. A change in finding is defined as meaningful if the panel result that controls for baseline outcomes is not within a 95 percent confidence interval of the endline result.

Table 11: Effect of KASAMA on child welfare

	Endline		Endline and Baseline Data	
	Co-resident Children		Panel Children

Short term goal	0.829 (0.377)	0.002 (0.018)	-0.008 (0.020)	-0.010 (0.020)

Long term goal	0.927 (0.260)	0.017* (0.010)	0.011 (0.010)	0.011 (0.010)
Stratum Fixed Effects		Yes	Yes	Yes
Baseline Controls		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1 and 2, and a child 12-17 observed in both baseline and endline in Columns 3 and 4. Each outcome is a characteristic of the household the child was assigned to at baseline. Column 1 contains the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4 reports the coefficient on an indicator that the child is associated with a household in a community randomly assigned to receive KASAMA. For column 2, this means the child at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3 and 4, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Child welfare increased in the full sample 0.045 standard deviations. This appears to be driven largely by changes in life satisfaction. Cantril's ladder improves by 0.215 points, or 3.4%, and more children report that they are thriving in response to the treatment. There is some suggestive evidence that maternal and paternal care improve, though this is only marginally statistically significant. Scores on the Student Life Satisfaction Survey improved by approximately 0.4 points, or 1.4%.

Turning to Table 12, welfare improvements seem to be largely amongst those children already in child labor at baseline. Assignment to treatment has no effect on overall welfare of children not in child labor at baseline. The difference between these two subgroups can likely be explained by looking at the control sample means: child welfare of baseline child laborers in the control group was much lower than non-child laborers, thus inducing the improvements in welfare in response to KASAMA. These improvements in welfare for baseline child laborers seems to again be due to improvements in life satisfaction. Children are more likely to report that they are thriving and have higher scores on Student's Life Satisfaction Survey. For children not in child labor at baseline, the main outcome in which they show improvements in welfare is that they are less likely to be suffering, as measured by Cantril's ladder.

Table 12: Effect of KASAMA on child welfare by baseline child labor status

Stratum Fixed Effects		Yes	Yes		Yes	Yes
Baseline Controls		No	Yes		No	Yes

An observation is a child aged 10-17 at endline in Column 1, and a child 12-17 observed in both baseline and endline in Columns 2 and 3. Column 1 and 4 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-3, and 4-5 reports the coefficient on an indicator that the child is associated with a household in a community randomly assigned to receive KASAMA. This means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Overall, despite the modest increases in economic activity, the results suggest that in general, children, particularly child laborers, have higher welfare due to the KASAMA treatment.

3.5.3 Rollout Relation to Findings

Our December 2017 Monitoring Report proposed examining whether treatment effect estimates were different in the subsample of barangays that received asset distribution before February 22, 2017 compared to barangays that received distribution after. February 22 is the median rollout date. Tables 13 and 14 show balance tables for the post-median treatment group versus the control group and the pre-median treatment group versus the control group, respectively. The barangay population is higher in the post-median rollout group relative to the control group. However, even with this statistically significant difference in population, we fail to reject the null hypothesis that these characteristics are the same across the treatment and control group (F-statistic=1.12).

Table 13: Balance of baseline variables for after median rollout versus control

Variable	Treatment Mean	Control Mean	Difference
Age at Baseline, Corrected	13.18 (2.15)	13.26 (2.22)	-0.08 (0.08)
Child is female	0.47 (0.50)	0.47 (0.50)	0.00 (0.02)
School attendance rate of child over last 7 days	0.47 (0.45)	0.45 (0.46)	0.02 (0.06)
Child is grade(s) behind	0.04 (0.20)	0.04 (0.20)	0.00 (0.01)

Household receives other government transfers in last 12 months	0.06 (0.24)	0.07 (0.25)	-0.01 (0.02)
Household reports family firm in last 12 months	0.59 (0.49)	0.61 (0.49)	-0.02 (0.04)
Family firm generated income in last 12 months (PPP adjusted)	396.81 (1754.72)	385.75 (15246.28)	11.06 (366.51)
Food expenditure as a share of non-durable expenditure in past 30 days	0.63 (0.16)	0.64 (0.15)	-0.00 (0.01)

ln(Total monthly household expenditure per capita)	4.34 (0.59)	4.29 (0.61)	0.05 (0.05)
Household has savings	0.36 (0.48)	0.34 (0.47)	0.02 (0.04)
Household has loans	0.78 (0.41)	0.78 (0.42)	0.00 (0.03)
Household had a shock in last 12 months	0.62 (0.49)	0.65 (0.48)	-0.03 (0.03)
Household had an illness in past 30 days	0.20 (0.40)	0.19 (0.39)	0.01 (0.02)
Household has outmigrants in last 24 months	0.16 (0.37)	0.19 (0.39)	-0.03 (0.03)
Barangay population (2010 Census)	5352.06 (4543.56)	3430.52 (3779.96)	1921.54** (860.29)
Food Security Index	-0.05 (0.49)	-0.01 (0.46)	-0.04 (0.03)
F-statistic on test of joint significance			1.12
P-value on test of joint significance			0.337

The sample includes all children 10-17 interviewed in the baseline child survey. Columns 1 and 2 report the mean of the variable for the treatment for barangays that received treatment after median rollout and the control group respectively. Column 3 reports the difference (Column 1 - Column 2). Standard errors are in parentheses. The final two rows of the table report the omnibus F-test of the joint significance of all the differences in the column above and the associated p-value. Indices are created following Anderson (2008)'s approach. The standard deviation of an index created is not mechanically 1 because of weighting by the inverse of the covariance matrix in index construction. ***p<0.01, **p<0.05, *p<0.10.

In Table 14, there are three statistically significant differences between the pre-median rollout treatment group and the control group: child age, child economically active in the last 7 days, and barangay population. We also reject the null hypothesis that the pre-median rollout treatment group and the control group are the same at the 10 percent level. In our midline monitoring report, we could not reject the null hypothesis. The main difference between these two tests is that in Table 14, we include the food security index, but this was not included in the monitoring report. If we exclude the food security index, we again cannot reject the null hypothesis that the pre-median rollout treatment group and the control group are the same. As a result, we test the robustness of all main results shown below to the inclusion of the baseline food security index. Its inclusion does not alter our results, and so we proceed with interpreting our results for the early treatment group relative to the control as causal.

Table 14: Balance of baseline variables for before median rollout versus control

Variable	Treatment Mean	Control Mean	Difference
Age at Baseline, Corrected	13.45 (2.20)	13.26 (2.22)	0.19*** (0.07)

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the child is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the child at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Table 15 shows the effects of KASAMA by early and late rollout timing. In general, effects are largely the same for the early and late treatment groups. The one difference for children that is statistically significant is that children in households that receive KASAMA early decrease their school attendance relative to the control group, while this is not apparent in more recent KASAMA recipients. Given the overall similarity of changes in late and early KASAMA barangays, this finding is a puzzle and may just be an artifact of the number of hypothesis tests in Table 15. It is only statistically significant at 10 percent, but the magnitude is large. One possible explanation in the data is that children in households that receive the treatment prior to the median rollout time increase hours in unpaid household services by approximately an hour and a half. Perhaps this time in unpaid household services drives the reduction in school attendance although the magnitudes would imply that an additional hour in unpaid household services in a week decreases the probability that the child attends any school by 6 percentage points. That seems an implausible magnitude. The magnitude of the decline in schooling is larger for children not in child labor at baseline but the difference is not statistically significant.

Another statistically significant difference in Table 15 is that prime age adults in the late treatment group increase their hours employed by almost 5 hours per week, while those in the early treatment group do not change hours. It is not surprising that there is additional work that arises with a new business although it is surprising that this would be more evident in the late group than the early group. This might again be an artifact of the large number of hypothesis tests in Table 15. Overall, we do not see a strong set of differences in the impact of KASAMA across early and late barangays.

3.6 Heterogeneity

In this project's Baseline Report, we examined the plausibility of evaluating the impact of KASAMA within several subgroups where subgroup characteristics are likely to interact with the impact of the program. We define an analysis within a subgroup as valid if we cannot reject the null hypothesis that the covariates used to assess balance cannot (jointly) predict treatment assignment. The Baseline Report includes the full set of subgroups that were considered and the rationale for considering each. In this section, we summarize our findings for different subgroups where random assignment appears balanced within the subgroup so that the treatment group can be compared to the control group.

Each subgroup characteristic is defined at baseline. Balance tables for each subgroup are included in Appendix D. In each case, the study population is split into two groups by the indicated characteristics. The first column of each table reports the difference between treatment and control in the first group. The second column contains the same for the second group. It is the joint difference within each column that matters for the validity of the treatment - control comparison within the subgroup and this is given by the F-Statistic and associated P-Value at the bottom of each column. The third column tests whether the treatment - control differences are the same across group 1 and group 2. This is not necessary for the within group comparisons of treatment and control to be valid, but it is useful to assess whether the two groups differ in ways that are likely to be meaningful in comparing results within each group.

We explore results related to each of our four hypotheses for each subgroup. Recall our four main hypotheses:

- Hypothesis 1: Sustainable livelihood promotion has no effect on how the household generates its livelihood.
- Hypothesis 2: Sustainable livelihood promotion does not change the household's standard of living.
- Hypothesis 3: Sustainable livelihood promotion does not reduce the prevalence of child labor amongst those already engaged.
- Hypothesis 4: Sustainable livelihood promotion does not reduce entry into child labor.

Results related to Hypothesis 1 - 4 are reproduced in Appendix E for each subgroup following the same format we have been using. Group 1 is in the first 4 columns and group 2 is in the second 4 columns. We begin with hypothesis 1 outcomes. For hypothesis 3 and 4 we report results that are analogous to Table 7 where we examine the impact of KASAMA on time allocation without regard to the child's baseline time allocation status. When the discussion warrants, we examine Hypothesis 3 and 4 separately.

3.6.1 Urbanity

Balance results are in Appendix D Table 3, and results are in Appendix E Table 1.

In both urban and rural areas, KASAMA increases the number of non-farm enterprises by a little less than four-tenths of an enterprise and the number of new non-farm enterprises by approximately a quarter of an enterprise. However, absent KASAMA, urban areas are less likely to have any farm or non-farm family firm, so that KASAMA increases the presence of any family firm more in urban areas.

Consumption increases by more in rural areas, while food security seems to improve similarly in urban and rural areas.

The observed increase in the presence of any family firm in urban areas shows up in the time allocation data. While we fail to reject the null of no effect on child time allocation-related variables throughout both urban and rural areas, in magnitude there is a large increase in child employment in family-based economic activity in urban areas that we do not see in rural areas. This does not appear to lead to more child labor.

3.6.2 Complete 4Ps rollout in barangay

All subjects in the study should be receiving 4Ps, but not all do. We stratified barangays to consider the impact of KASAMA on top of 4Ps within barangays that all beneficiaries report receiving 4Ps. We do not know why some barangays have an incomplete distribution of 4Ps. Measurement error in respondent recall about 4Ps is certainly a possibility. Hence, while we are interested in contrasting all other sources of heterogeneity in this section, here we are only interested in looking at the impact of KASAMA in these barangays with complete 4Ps rollout. We will not contrast our findings with barangays with incomplete rollout as we do not know why some households in some barangays do not report receiving 4Ps. Balance results are in Appendix D Table 4. Results are in Appendix E Table 2.

In communities with complete 4Ps rollout, we observe larger increases in the presence of any family firm compared to the pooled population. KASAMA raises the probability of any family firm by 11 percentage points or 15 percent. We observe similar numbers of new non-farm enterprises in the complete rollout as in the full sample. KASAMA increases the number of new nonfarm enterprises created within the last 12 months by roughly a quarter of an enterprise.

We observe increases in consumption and food security with treatment in communities with complete 4Ps, though these results are not statistically significant in all samples. Magnitudes are similar to the full sample.

On the child labor findings, we find substantively different results in areas that differ based on whether 4Ps is completely rolled out. In complete rollout areas, child involvement in family-based economic activity increase by 10 percentage points with treatment, albeit to the level of the control population in the area without complete 4Ps. This increase in family-based economic activity shows up in economic activity overall. Treatment is associated with 13 percent higher economic activity rates among children, and it is also associated with a 7 percentage point or 9 percent statistically significant increase in child labor.

Interestingly, in the complete 4Ps community we also observe more children working outside the home with treatment and more child engagement in collection activities, such as fetching water or wood. The result of the increased work outside of the home is that we also see a rise of nearly 11 percent in children potentially engaged in a worst form of child labor.

Appendix E Table 2A looks at the impact of treatment on children who were child laborers at baseline. Appendix E Table 2B looks at the impact of treatment on children who were not. The increases in work for pay from treatment is larger for those children who are in child labor at baseline. The increases in child labor, hazardous child labor, and worst forms of child labor is largest for those not engaged in child labor at baseline. These increases in hazardous and worst forms seem to come from children working in occupations that are associated with hazardous child labor. Treatment increases these measures of child labor so that they have a similar prevalence of child labor as those that were in child labor at baseline.

The changes in adult employment (bottom of Appendix E-2) provide some explanation for these findings. Adult engagement in family-based economic activity increases is a similar magnitude to the growth in family firms. With this rise in family-based economic activity for adults, we see a slight reduction in time in unpaid household services. We also observe an imprecise 4 percent decline in labor earnings per adult. It seems the additional child labor comes from a combination of more child involvement in the new family firm as well as filling in for the decline in adult activities in household services. The increase comes from those not already working, because they are the available labor.

Appendix E Table 2C looks at the impact of treatment on child welfare in those barangays where 4Ps rollout was complete. Child welfare improves by .042 standard deviations, which is similar to the effects found in the full sample. Unlike the full sample where these effects seem to be driven largely through changes in life satisfaction, these improvements seem to be due to more

positive scores on the CES depression screener of approximately 1 point. Treatment children are 2.7 percentage points more likely to have set a long-term goal.

3.6.3 Gender

Balance tests are in Appendix D Table 5. Results are in Appendix E Table 3. We do not observe meaningful differences in the impact of KASAMA by the child's gender.

3.6.4 Age

Balance tests are in Appendix D Table 6. Results are in Appendix E Table 4. We do not observe meaningful differences in the impact of KASAMA by the child's age.

3.6.5 First Born

Balance tests are in Appendix D Table 7. Results are in Appendix E Table 5. We do not observe meaningful differences in the impact of KASAMA by whether the child is first born.

3.6.6 Number of Children in Household

Balance tests are in Appendix D Table 8. Results are in Appendix E Table 6.

We do not observe meaningful differences in the impact of KASAMA by whether the household has 5+ children. However, one difference that appears is KASAMA is associated with more child labor in households with 5+ children. This finding appears to owe to an increase in child engagement in family-based economic activities, although that does not vary with the number of children and is not statistically significant. The increase in child labor is just barely significant at 5 percent and given that it does not broadly seem to be associated with other substantive changes in treatment effects, we think this is more likely an artifact of the large amount of testing rather than a meaningful difference in the impact of KASAMA.

3.6.7 Non-Agricultural Households

A household is defined as agricultural or non-agricultural based on whether the household defined agriculture as its most important source of livelihood at baseline. Balance tests are in Appendix D Table 9. Results are in Appendix E Table 7.

KASAMA's impact on the presence of a family firm is larger in magnitude in agricultural households. This appears to owe to the fact that nonagricultural households are more likely to already have a family firm. For example, the treatment effect on the presence of any family firm is more than double in agricultural households, but treated households have the same probability of having a family firm in both household types after treatment. The same general pattern is also observed in the number of new non-farm enterprises.

The impact of KASAMA on the well-being of the respondent looks similar across household types and is insignificant. Similarly, there are no clear differences in the child labor-related outcomes.

3.6.8 Presence of a Non Agricultural Business

The previous subsection grouped households based on whether the household respondent identified agricultural work as most important to the household. This subsection groups

households based on whether they reported operating a nonagricultural business at baseline. Interestingly, nearly 14 percent of households with a non-agricultural business at baseline did not have one by endline. Balance tests are in Appendix D Table 10. Results are in Appendix E Table 8.

Households with a nonagricultural business at baseline appear to be able to leverage KASAMA into higher income. The impact of KASAMA on family firm-generated income is nearly 5 times greater in households that had a non-agricultural business at baseline. The impact of KASAMA on the number of non-farm enterprises and the number of new non-farm enterprises is smaller in magnitude in households with a non-agricultural business at baseline. Together, these findings imply that households with non-agricultural businesses at baseline put KASAMA into their existing activities.

This additional income in a family business does not appear to translate into improvements in well-being in those with a baseline non-agricultural business compared to those without. In fact, the improvements in consumption and food security are bigger in households that lacked a family business at baseline; households without a baseline non-agricultural business had lower consumption and food security, as shown by the control means.

However, we do observe increases in child labor that seem to stem from increases in child employment in family-based economic activity for households with a non-agricultural business at baseline. This corresponds with declines in adult employment outside of the family without much of an increase in adult engagement in the family firm. In contrast, in those households without a non-farm business at baseline, we see no real changes in child labor.

Together, this evidence suggests that households with a non-farm business can generate additional income with the KASAMA productive assets, but that they need to draw children to handle the expanded business. Households without a business at baseline will respond to KASAMA with more consumption and more economic activity of adults without needing to bring in children.

This finding highlights the tension in KASAMA. Those who know how to run their own business are doing so and do not have slack time to devote to an expansion. However, those that don't know how to run a business are not well positioned to succeed with KASAMA.

This idea that those with a business lack slack is apparent when we look at hypotheses three and four separately. In Appendix E table 8a, we see that children who were in child labor at baseline work more outside the family and for more hours (although the latter is insignificant. Children who were not in child labor at baseline (Appendix E table 8B) are the ones who experience the growth in child labor, hazardous child labor, employment in family-based economic activity, and potentially worst forms of child labor (which in this case is driven entirely by the hazardous child labor).

Child welfare remains largely unchanged for children in households with a non-farm business at baseline. Any impacts on child welfare for this subgroup are positive, so children do not appear to be worse off, but the effects are also not statistically significant. On the other hand, children in

households without a non-farm business experience statistically significant improvements in welfare. These improvements are driven by increases in life satisfaction. Children in households without non-farm business have lower levels of welfare, and the increases shown here bring them to similar levels as children in households with non-farm businesses.

3.6.9 Child Labor in household

Above, we considered heterogeneity based on whether a child was in child labor. In this section, we consider heterogeneity based on whether any child in the household is in child labor at baseline. Results in this section are similar but less precise than above, because there are not many households with multiple children in the targeted age range that differ in their child labor status. If what matters is the child's own status, adding in those few extra children who were not in child labor adds imprecision, and that is what our results look like. Balance tests are in Appendix D Table 11. Results are in Appendix E Table 9.

3.6.10 Hazardous child labor in household

The results from splitting the sample based on the presence of hazardous child labor in the household are very similar to the findings from the previous section when the sample was split by whether child labor was present. Balance tests are in Appendix D Table 12. Results are in Appendix E Table 10.

Results around hypothesis 1 are similar for the two subgroups with the no hazardous child labor group having slightly larger magnitudes on the number of non-farm enterprises and new non-farm enterprises. Results around hypothesis 2 are also generally similar except for food security. There, the hazardous child labor present households start off with much more food insecurity and experience larger improvements in food security.

The non-hazardous child labor households start off with less economic activity, less hazardous child labor, and less employment in family-based activities, and they see all of those increase with KASAMA. They also experience growth in hours worked and in hours in unpaid household services. While these child labor results imply that KASAMA is inducing a convergence between the two groups, we see no such results in adult economic activity where the two groups seem to respond similarly to KASAMA. Hence, the child time allocation results mirror the convergence type result that we saw for child labor above.

3.6.11 Household has savings

We split the study group based on whether any household reports formal savings. Balance tests are in Appendix D Table 13. Results are in Appendix E Table 11.

Households with savings appear to be able to translate KASAMA into family firm-generated income with less growth in the number of non-agricultural business or the presence of a family firm. It is unsurprising that the presence of family firms are correlated with savings. Hence, the same dynamic should be in place here as with the presence of a non-agricultural business in section 3.6.8.

The additional income translates to more consumption in the population with savings albeit not more food security (given that the families with savings already feel more food secure).

We do not see meaningful differences in how child time allocation-,related outcomes change with KASAMA across households that do and do not report savings.

3.6.12 Household has loans

We split the sample by whether the household reports any outstanding loans. Balance tests are in Appendix D Table 14. Results are in Appendix E Table 12. Results do not seem to vary meaningfully by loan status.

3.6.13 Household experiences a shock

We split the sample based on whether they have experienced a shock in the last 12 months. Balance tests are in Appendix D Table 15. Results are in Appendix E Table 13.

Households that did not experience a shock are able to leverage more income to family firms out of KASAMA although that additional income does not seem to translate into differential improvements in well-being or changes in child time allocation.

The differential increase in income without a differential improvement in food security seem consistent with the view that the shock and no shock groups may use KASAMA in different ways with both leading to additional food security, but the shock group largely consuming the transfer relative to the no shock group which use the transfer to earn additional income in the business.

3.6.14 Household has experienced an illness

We split the sample based on whether they have experienced an illness in the last 12 months. Balance tests are in Appendix D Table 16. Results are in Appendix E Table 14.

The illness results are somewhat surprising with no meaningful differences in the results around hypothesis 1, but the illness group experiencing more consumption, food expenditures, food security, and durables when receiving KASAMA. The illness control group is below the non illness group in all of these dimensions at endline, so all of these increases represent a convergence. However, it seems meaningful that KASAMA seems to have had such clear effects related to hypothesis 2 when provided to a household with an illness.

These improvements in well-being with KASAMA in the illness families correspond to increases in child labor and increases in reports of other worst forms of child labor. This broadly negative portrait of the impact of KASAMA in families with illness contrast sharply with the hypothesis 2- related outcomes which tell a more positive story.

Interestingly, this increase in child labor is similar regardless of the child's baseline time allocation status (Appendix E Tables 14A and 14B), and in both there is the potential that the child is in forced or bonded labor. One interpretation of this finding is that KASAMA gives families experiencing a health shock the capacity to help triage it, albeit in part through engaging children, both those already in child labor and those not yet.

Given the increases in child labor for households experiencing an illness, we turn next to child welfare (Appendix E Table 14C). Children in households with illnesses have lower welfare initially. The improvements are similar across children in households with illnesses or not, but there are only statistically significant increases in welfare for children in households without illnesses. Combined with the previous results, KASAMA seems to improve overall household welfare in households where there has been an illness, but children are working more and do not experience gains in child welfare.

3.6.15 Household receives 4Ps

We split the sample based on whether the household reports receiving 4Ps. This differs from the analysis above that bifurcated the sample based on whether all households in the community receive 4Ps as here the split is a household, not community characteristics. Thus, the 4Ps household group includes all the households in the complete 4Ps rollout stratum plus households within the incomplete rollout stratum that were receiving 4Ps. Balance tests are in Appendix D Table 17. Results are in Appendix E Table 15. We detect no meaningful differences across the two groups.

3.6.16 Household is Food Secure

We split the sample based on whether the household's food security index is above average (an index value of 0). Balance tests are in Appendix D Table 18. Results are in Appendix E Table 16. The food security indexes increase by more in the low group (consistent with convergence), but there do not appear to be other meaningful differences in the response to KASAMA.

3.6.17 Adult Wage Work in Household

We split the sample based on whether there is an adult working for wages in the household. Balance tests are in Appendix D Table 19. Results are in Appendix E Table 17. We cannot reject the null of no difference in the impact of KASAMA across the two classifications.

3.6.18 Export Agriculture in Barangay

We split the sample based on whether there is export agriculture in the barangay. Balance tests are in Appendix D Table 20. Results are in Appendix E Table 18.

In locations without export agriculture, KASAMA seems to have a larger impact on outcomes related to the operation of non-farm enterprises. We see larger impacts of operating a family firm and starting a new one (although differences are not statistically significant). Other than these hypothesis 1 related findings, we find no meaningful differences in the impact of KASAMA.

3.6.19 In-land fishing in Barangay

We split the sample based on whether there is in-land fishing in the barangay. Balance tests are in Appendix D Table 21. Results are in Appendix E Table 19. We cannot reject the null of no difference in the impact of KASAMA across the two classifications.

4. Discussion

4.1 Limitations

This study evaluates a sustainable livelihood evaluation amongst families with child laborers on the island of Luzon.

As a sustainable livelihoods intervention, its implementation is one of several variants. Subjects choose what asset they would like to receive. Hence, the choice of asset takes advantage of private information about what the subject is good at. Some other sustainable livelihood interventions conduct market studies or attempt to train subjects on a new type of business. As such, those interventions build new skills with an outsider's view of what is appropriate to a local economy. The findings from this study may not generalize to the impact of other sustainable livelihood approaches in the same location with the same households.

Of course, this location and policy context may be responsible for the results herein as well. The Philippines is developed relative to where most of the world's child laborers live, and Luzon is not the poorest area of the Philippines, even though our subjects are very poor. We have found results that are consistent with labor market failures and limits on the availability of employment options to child laborers. We generally think that the types of market failures driving the increased child labor are apt to be more prevalent in poorer locations, but one should still be attentive to the fact that the local labor market conditions are important for the nature of the findings.

We also cannot speculate as to whether larger transfers or different targeting might lead to different results as those issues have not been experimentally controlled.

4.2 Generalizability

Some of the conclusions of the study about the interaction of nonagricultural employment in the home and the treatment effect may be specific to this context, and certainly the evidence from illnesses would differ in a context with stronger insurance mechanisms to cope with illness.

In general, this study should be read as a first step to evaluating this type of sustainable livelihoods intervention on child labor and the well-being of children, but, as the start of a broader researcher program, we do not have any basis to evaluate how the findings herein would extrapolate to other settings other than to say that we would expect to see more of the market failures that generate the increase in child labor with KASAMA in poorer contexts. That said, we do not find that these increases in child labor coincide with declines in child well-being. Children eat more and report greater life satisfaction.

4.3 Interpretation

We find improvements in food security and child welfare that coincide with KASAMA's impact on the presence of new family firms despite the increases in child labor.

We can use our data to infer whether these increases in food security and child welfare are larger than would be predicted by the value of the KASAMA transfer alone (PHP 10,000).

To examine this, we use the control sample. We regress the endline outcome on the baseline log of total household consumption, controlling for stratification fixed effects. That gives us an estimate of the average change in the outcome at endline (in standard deviations, given that we are working with standardized indexes) associated with a doubling of baseline household consumption per month. The PHP 10,000 KASAMA asset transfer is 89 percent of a month's total household consumption. Hence, we multiply the coefficient by .89 to get the predicted change in the index with just the value of the KASAMA transfer.

For the food security index, the coefficient on log household consumption is 0.041 (barangay clustered standard error of 0.032). Thus, the value of the asset transfer should be associated with a 0.036 standard deviation improvement in food security. The actual improvement in food security is 0.066 standard deviations (table 6), substantively larger than predicted by the value of the asset transfer although well within the confidence interval of between a 0.021 standard deviation fall in food security and a 0.098 improvement in food security.

For the child well-being index, the coefficient on log household consumption is 0.66 (barangay clustered standard error of 0.17). Thus, the value of the asset transfer alone would imply a 0.059 standard deviation improvement in child well-being with a confidence interval ranging between 0.028 and 0.88. The actual improvement in child well-being is 0.045 standard deviations (Table 11), slightly below what would be predicted by the value of the asset transfer but well within the confidence interval.

These simple back-of-the-envelope calculations highlight that our findings of improvement in food security and child welfare can come from something as simple as the value of the asset transfer. They may have nothing to do with the changes in child labor, or perhaps the change in child welfare is slightly below what we would expect from the transfer itself because of the compensating rise in child labor. The imprecision is such that there is no way to rule out an impact of child labor on child welfare, but the data do not reject the null hypothesis that the value of the asset transfer is what's driving the changes in food security and child welfare. While we cannot identify what would happen to subjects if KASAMA just gave them cash instead of a productive asset, the data do not suggest any clear evidence of something different coming from the KASAMA intervention.

4.4 Policy Implications

4.4.1 Summary

Overall, KASAMA reached its targeted population, and these households opened, maintained, and expanded enterprises. It is worth emphasizing that the enterprises opened or expanded through KASAMA are not necessarily using directly the assets transferred through KASAMA. In our qualitative work, we encountered many subjects who received assets in one business and then bought and sold several times to find the business that worked best. Qualitative respondents reported little value in the training sessions, and also were unaware that the transfer was targeted at households with child laborers.

KASAMA obtained an impressive rate of return on average. Beneficiary households were better off with improvements in living standards as measured by per capita expenditures and food security.

These achievements from KASAMA improved the material well-being of some of the poorest households in the Philippines. However, KASAMA does not appear to have substantively reduced child labor in beneficiary households. In fact, in many households, children who were not in child labor at baseline were drawn into economic activity. Despite the rise in economic activity, these children report being more satisfied with life and happier as a result of KASAMA.

This highlights one of the important tensions in using a sustainable livelihood program to combat child labor. Families with child labor present are amongst the poorest and most disadvantaged, and livelihood support can ameliorate their poverty (as KASAMA has done). However, when introducing a new economic activity into a household, available labor is needed to work in the new economic activity. In the case in the Philippines, there was no evidence of a large surplus of prime age adult labor. Poor families are working hard to make ends meet, so the addition of a new economic activity or expanding an existing activity will necessarily bring in more marginal workers, which are often children and the aged (unreported above, elder women increased their economic activity by 48% from treatment). Thus, it is critical to be clear on the goals of a sustainable livelihood program. If the goal is to improve the lives of families with child labor, then KASAMA was an impressive success. If the goal was to eliminate child labor in beneficiary families, then these findings will be disappointing.

These contrasting goals are particularly evident when we look at the impact of KASAMA in families with a nonagricultural family business present at baseline. These experienced entrepreneurs were more successful in leveraging the productive asset transfer to increase their income with much higher rates of return on the asset transfer. However, households with existing family businesses were already using the available labor. In these homes, children did not just work more, they moved into child labor, and though we found improvements in living standards and food security, we did not see the increases in child life satisfaction that we saw in the general population. Thus, even though these experienced entrepreneurs are more successful at translating KASAMA to profits, their children seem to benefit less from KASAMA.

4.4.2 Benefit Amount

Would these findings be different if the benefit amount were larger? It is important to note that the KASAMA transfer is effective at starting, expanding, and maintaining businesses. We do not have experimental variation in the benefit amount in order to estimate an elasticity of the program's impact across households. The best we can do is to consider whether the impact of KASAMA is larger in families where the transfer is a larger share of their income. Given that the transfer is constant across households, this implies comparing the impact of KASAMA in poorer households to better off households as the transfer is a larger share of income in the poorer households.

To do this, we sort households based on our baseline living standards measure (per capita expenditures) and estimate treatment effects on the change in the outcome of interest between treatment and control barangays. The impact of treatment on the change in living standards by baseline living standards is pictured in Figure 7:

Figure 7: Percentage change in per capita expenditures (PCX) with treatment by baseline per capita expenditures

To compute treatment effects in Figure 7, we estimate nonparametric regressions of the log of per capita expenditures at endline against baseline log per capita expenditures separately for treatment and control barangays, then compute the estimated difference. The pictured 95 percent confidence intervals are empirical confidence intervals computed using a bootstrapping technique that replicated the sampling design of the study 1,000 times.

The value of the asset is largest in poorest households, and there we see the smallest effects. In general, the impact of KASAMA on living standards is larger in better off households, when the value of the asset, relative to other household resources is smaller. We use this same approach to look at child labor in Figure 8.

Figure 8: Percentage point change in child labor with treatment by baseline per capita expenditures

We do not see a statistically significant difference in the impact on child labor across the baseline living standards distribution (we cannot reject a straight, flat line through the figure) although the growth in child labor is larger in better off households.

Taken together, our findings do not provide any basis to expect that child labor declines would be observed if the KASAMA benefit were increased. Would households be better off with larger transfers? That seems likely, but our findings do not provide any basis to believe that this would lead to less child labor. There is a theoretical result in the literature that child labor should have an inverse U relationship to household assets (Basu, Das, and Dutta 2010), but there is no suggestion in our households of any such relationship holding in the Philippines.

4.4.3 Household Asset Choice

In KASAMA, households choose their own assets, and one alternative approach to sustainable livelihood is to choose assets for households based on some outside expert's opinion of what is appropriate for the beneficiary's community. Our study provides reasons to be skeptical both about whether all recipients in a community should do the same thing and whether an outside expert can do a better job of anticipating what type of asset would be best for the household.

The value of household asset choice was apparent in our qualitative work where we encountered respondents with a variety of backgrounds and skills. We met a woman who had managed to increase her asset value more than six-fold in a year through her piggery. Nearby was a woman running a *carinderia* who received useful inputs for her small restaurant. We cannot establish whether these women could have been better off working together on some third business, but they had clear and different skills that KASAMA helped them leverage.

Not everyone knows what they will be best at. We encountered women who changed assets several times. In one community, we encountered a woman who started off with a sari-sari store, sold that for rice to sell, then sold that rice inventory for a piggery. In another community, we encountered a woman who started off with pigs but found them too difficult and sold them to open a sari-sari. Another woman we met started off with a sari-sari, sold that for rice vending, and then sold that to buy a used tricycle (a motorbike with a sidecar to transport passengers). This process of figuring out what works for a household felt very idiosyncratic, and it is hard to imagine how an outside expert could be more informed than our beneficiaries about their latent skills without the same sort of experimentation that our subjects went through.

Many subjects chose sari-sari stores for their assets. When asked why they chose sari-sari, a common response was that the flexibility of running a sari-sari met their needs. Sari-saris can be operated when you are available and be closed when you are not and can be operated within the home. A common reason subjects referenced for desiring flexibility were the demands of child care. We find support for this idea when we look at rates of returns realized by beneficiaries in treatment communities in Figure 9.

Figure 9: Rate of return on KASAMA and dependency ratios by asset type

Figure 9 contains a nonparametric regression of the rate of return on KASAMA on the dependency ratio for households that received a sari-sari (solid black) and those that selected a different asset (dotted grey). The rate of return calculation used in the figure is identical to that used to generate Figure 5 above. The dependency ratio is defined as is standard in demography:

the number of individuals age 0 to 14 and older than age 65 in the household divided by the number individuals age 15 to 64. In general, sari-sari stores do well, but we can see that when there are more dependents in the household relative to prime age earners, sari-sari does especially well, in contrast to other assets.

Hence, while we cannot say whether there are better choices for our households, the data are consistent with the view that a single prescription for a community will have heterogeneity in returns within the community and will likely exclude some households from benefiting. Subjects did say that they would have liked to have known what other beneficiaries were receiving to prevent market saturation, but that does not imply that some outside expert should allocate assets to manage this.

5. Other Information

5.1 Registration

This study was registered in the AEA RCT Registry, RCT ID AEARCTR-0001139. Link to registration: <https://www.socialscienceregistry.org/trials/1139>

5.2 Protocol

The intervention was administered by DOLE without interference from the research team, following DOLE's protocol for the implementation of KASAMA.

5.3 Funding

Funding for the evaluation was provided by United States Department of Labor under Cooperative Agreement IL-27208-15-75-K-9. KASAMA was funded by DOLE through its usual budgetary process. This material does not necessarily reflect the views or policies of the United States Department of Labor, nor does the mention of trade names, commercial products, or organizations imply endorsement by the United States Government.

Appendix A: Results Framework

Level	Outputs	Intermediate Outcomes			Project Objective
Objectives	O1: Enterprise support provided Supporting results: O1.1 In-kind transfers made to beneficiaries to support enterprises O1.2 Social preparation and optional, demand-driven enterprise trainings conducted	IO1: Growth in earning opportunities within the home Supporting results: IO1.1 Increased household income IO1.2 Change in employment opportunities	IO3: Diminished economic motives that lead to child labor Supporting Results: IO3.1 Liquidity constraints relaxed IO3.2 Subsistence constraints relaxed IO3.3 Changed perception that child labor unnecessary IO3.4 Increase in household goods where child time is complimentary IO4: Increase in economic activity IO4.1: Increased household enterprises	IO5: Diversion away from child labor Supporting Results: IO5.1 Reduction of child's time dedicated to child labor IO5.2 Increase in child's time toward non-child labor related activities IO6: Increased demand for alternatives to work IO6.1 Increased school attendance among children	Reduction in the incidence of child labor and children at risk
	O2: Beneficiaries commit to stop child labor within the household Supporting results: O2.1 Beneficiaries read and sign DOLE's commitment form to end child labor within their household				

	Maximum six months, commencing in March 2016	Occurs immediately upon transfer (commencing March 2016). Sustains going forward through January 2018 Endline	Measurable possibly immediately but almost certainly within 6 months of transfer. Sustains going forward through January 2018 Endline	Measurable within 6 months of transfer. Sustains going forward through January 2018 Endline	Measured 2 years after baseline in January 2018
Assumptions	<p>KASAMA activities have sufficient funding</p> <p>DOLE has human capacity to administer the intervention</p> <p>Local government units (LGUs) supportive of the activities and allow DOLE to administer benefits</p> <p>Beneficiaries sufficiently understand the term “child labor” and take written commitments seriously</p>	<p>Asset received is maintained (e.g. livestock does not die)</p> <p>Household understands how to make asset productive</p> <p>Market exists for good or service produced</p> <p>No major external shocks occur (e.g. natural disasters)</p>	Increased income sufficient enough to impact resulting intermediary outcomes	<p>Parents value alternatives to work for children (e.g. schooling)</p> <p>Sufficient access to alternatives such as schooling</p> <p>New economic activities don’t increase the demand for child labor</p> <p>The parents are the primary decision-makers over the child’s time allocation</p>	

Appendix B: Workplan

	Dates	Task	Activity	
		1.0	EVALUATION SET-UP	
2015	28-Aug	Deliverable	Contact information of Grantee provided to USDOL	
	28-Aug	1.1	Launch event with DOLE and U.S. Embassy	
	11-Sep	Deliverable	Written notification that key personnel have begun work on the project	
	30-Oct	Deliverable	Negotiated Indirect Cost Rate Agreement (NICRA) Proposal	
	Start: 12-Oct	1.2	Principal Investigator Philippines visit to refine design and implementation plan	
	Start: 12-Oct	1.3	Preliminary field visits and focus group discussions with local government officials and implementation partners	
	Start: 12-Oct	1.4	Capacity building sessions in impact evaluation for government officials	
	15-Oct	1.5	Hire full-time Research Associate for project	
	19-Oct	Deliverable	Draft work plan	
	Start: 19-Oct	1.6	Questionnaire development and pilot	
	31-Oct	Deliverable	Federal Financial Report (FFR)	
	26-Nov	Deliverable	Final work plan and draft evaluation design plan	
	18-Dec	Deliverable	Final evaluation design plan	
	18-Dec	Deliverable	Draft baseline survey tools and training materials, IRB approval	
		2.0	BASELINE SURVEY, MIDLINE SURVEY, & MONITORING	
2016	Start: 04-Jan	2.1	Survey team recruitment and training	
	10-Jan	Deliverable	Final baseline survey tools (instruments, data analysis plan, informed consent and protocols used during the survey, training materials, IRB approval)	
	Start: 09-Feb	2.2	Conduct baseline survey. Estimated completion: April	
	31-Jan	Deliverable	FFR	
	Start: 04-May	2.3	Begin monitoring compliance	
	Start: 01-May	2.4	Data cleaning and analysis of baseline data	
	30-Apr	Deliverable	FFR, Technical Progress Report (TPR), and updated work plan	
	30-Jul	Deliverable	FFR	
	29-Sep	Deliverable	Draft baseline survey report package and qualitative report	
	28-Oct	Deliverable	Final baseline survey report package and qualitative report	
	30-Oct	Deliverable	2 FFRs, TPR, and updated work plan	
	04-Jan	2.5	Hire full-time Research Associate	
	31-Jan	Deliverable	2 FFRs	
	Start: 17-Apr	2.6	Survey team recruitment and training (Training May 15 - 20)	
2017	15-Mar	Deliverable	Draft midline survey tool and training materials, IRB approval	
	10-May	Deliverable	Final midline survey tools (enumerator manual, IRB approval, informed consent).	
	Start: 22-May	2.7	Conduct midline survey. Estimated completion: July	
	05-Jun	Deliverable	Intervention monitoring report	
	30-Apr	Deliverable	2 FFRs, Technical Progress Report (TPR), and updated work plan	
	30-Jul	Deliverable	2 FFRs	
	Start: 01-Aug	2.8	Data cleaning and analysis of midline data	
	30-Oct	Deliverable	2 FFRs, TPR, and updated work plan	
	17-Nov	Deliverable	Draft midline survey report and intervention monitoring report	
	18-Dec	Deliverable	Final midline survey report	
			3.0	ENDLINE SURVEY
	Start: 01-Oct	3.1	Refine and pilot endline survey instruments	
	Start: 02-Jan	3.2	Survey team recruitment and training	
	12-Jan	Deliverable	Final survey tools submitted	
31-Jan	Deliverable	2 FFRs		
Start: 01-Feb	3.3	Conduct endline survey. Estimated completion: May 2018		
		4.0	DATA ANALYSIS AND REPORT WRITING	
2018	30-Apr	Deliverable	FFR, TPR, and updated work plan	
	Start: 01-May	4.1	Data cleaning and analysis	
	30-Jun	Deliverable	Government Property Inventory Disposition Request	
	30-Jul	Deliverable	FFR	
	16-Sep	Deliverable	Draft final and summary report	
			5.0	DISSEMINATION
	03-Oct	Deliverable	Public-use datasets, log of analyses, data crosswalks, data tables	
			Final report and results summary report	
2019			Dissemination presentation slides	
	22-Oct	Deliverable	Philippines dissemination event	
			FFR, TPR, and updated work plan	
	30-Jan	Deliverable	Closeout Documents checklist; final TPR; final FFR; Closeout Financial Form	
			Recipient's Release Form; Government Property Closeout Inventory Certification	

Appendix C: Detailed Variable Definitions

Appendix C.1 Detailed definitions for hypothesis 1

Primary outcomes:

- *Household reports receiving KASAMA.* Household reports receiving Kasama in the past 12 months in either the midline or endline household survey. Defined by Question 14 of Section 7 of the endline survey.
- *Household reports agricultural or non-agricultural family firm.* Household member fully, or partly, owns and operates one or more enterprises (including agricultural and livestock generating activities) in the past 12 months. Defined by Questions 2, 8, 14, 20, 26, 32, 38, and 44 of Section 6 of the endline survey.
- *Family firm generated income.* PPP adjusted US dollar value of all income in the past 12 months from family firms, including agricultural, livestock, or enterprise activities.
 - Agricultural income is defined as all revenue from an agricultural enterprise (Section 6, Question 71) minus all associated costs (Section 6, Question 72).
 - Livestock income is defined as all revenue from livestock related enterprises (Section 6, Question 71) minus all associated costs (Section 6, Question 72).
 - Enterprise income is defined as all revenue from non-farm related enterprises (Section 6, Question 71) minus all associated costs (Section 6, Question 72).
- *Economic Activity* of all household members aged 25-50. We measure this using the following variables:
 - Employed - Engaged in economic activity (in the last 12 months). The U.N System of National Accounts defines economic activity as all production that could be destined for the market, regardless of whether the decision is made to sell or retained for own use. Thus, economic activity occurs both inside and outside of the home, regardless of whether the good or service produced is sold in the market. It includes collection activities such as the collection of wood or water. An adult is employed if the response to Questions 1, 3, 5, 7, 9, 11, 13, 15 equal to 1 or >0 response to Question 21 in Section 8 of the Endline Household Survey.
 - Employed in Family Based Economic Activity (in the last 12 months) – An adult is employed in a household based economic activity if the response to Questions 1, 3, 5, 7 equal to 1 or >0 response to Question 21 in Section 8 of the Endline Household Survey.
 - Employed outside the Family (in the last 12 months) – An adult is employed in economic activity outside the family if the response to

Questions 9, 11, 13, 15 equal to 1 in Section 8 of the Endline Household Survey.

- Hours Employed (in typical week) – Hours worked in a typical week in the past 12 months as measured from Question 27 of Section 8 in Endline Household Survey.
- Hours of Unpaid Household Services (in a typical week) – Hours spent on household chores in the past 12 months as measure from Question 23 of Section 8 in the Endline Household Survey.
- Earnings (in the last 12 months) – Total earnings from employment (excluding self-employment) over the last 12 months as collected in Question 19 of Section 8 in the Endline Household Survey.
- New Economic Activity – Indicator for if an adult undertook a new economic activity in the past 12 months, as defined by Question 29 of Section 8 in the Endline Household Survey.
- Migrated for Employment (in the last twelve months) – Indicator if an adult in the household worked in another village, town, city or country, as defined by Question 15 of Section 8 in the Endline Household Survey.

Secondary outcomes:

- *Number of non-farm enterprises.* Number of enterprises owned or partly owned by household members. Defined by Questions 2, 8, 14, 20, 26, 32, 38, and 44 of Section 6 of the endline household survey.
- *Number of livestock.* Number of large livestock, small livestock, or poultry owned by the household, as defined by Section 9, Questions 8 and 9 in the endline household survey.
- *Amount of land owned.* Units of land owned by the household in square meters. Defined by Section 9, Questions 1, 2, and 3 in the endline household survey.
- *Number of new non-farm enterprises (opened in the last 24 months).* Number of non-farm enterprises that have opened in the past 24 months, as defined by Section 6, Question 54 of the endline household survey.
- *Interest paid on loans.* PPP adjusted US Dollar value of interest paid on loan payments as defined in Section 11, Questions 4, 7, 10, 13, 16, 19, and 22 of the endline household survey.
- *Reports borrowing.* Indicator variable equal to 1 if the household had a loan from a bank, MFI, family or friend, agricultural traders, informal money lenders, sari-sari stores, or other loans, as measured in Questions 2, 5, 8, 11, 14, 17, 20 in Section 11 of the Endline Household Survey.

- *Remittance income.* PPP adjusted US Dollar value of monetary gifts received (Section 6, Question 80) minus peso value of monetary gifts made (Section 6, Question 79).

Appendix C.2 Detailed definitions for hypothesis 2

Primary outcomes:

- *Household per capita consumption.* Food expenditures plus alcohol, tobacco, medical, education, social and other expenditures, divided by the number of household members. Food, alcohol, and tobacco expenditures are measured in Section 10, Questions 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, and 30 in the Endline Household Survey. Medical expenditures are measured in Question 48 of Section 10 in the Household Survey, while education expenditures are measured in Question 49 of Section 10 of the Household Survey. Social expenditures include charitable donations, dowry fees, fees paid to barangay officials, religious expenses, funeral expenses, weddings, and recreation expenses, and other expenditures include airtime, travel and transportation, gambling expenditures, clothing, personal items, household items, firewood, electricity, water, home repairs and improvements, as defined by Questions 31-46 of Section 10 of the Household Survey. All values are PPP adjusted.
- *Total food expenditures.* PPP adjusted total food expenditures as defined in Section 10, Questions 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 26, 28, and 30 in the Endline Household Survey.
- *Food security index.* Weighted standardized average of indicator variables of the following food security variables. All variables below are turned into indicator variables where a non-zero value is equal to 1 and defined so a positive outcome is the “better” outcome.
 - Meals skipped (adults in past 30 days) -- The number of meals cut or skipped in the last 30 days, as measured in Questions 1 and 2 of Section 13 of the Household Survey.
 - Whole days without food (adults in past 30 days) -- The number of days without food in the last 30 days, as measured in Questions 3 and 4 of Section 13 of the Household Survey.
 - Meals skipped (children in past 30 days) -- The number of meals cut or skipped in the last 30 days by children less than 14 years of age, as measured in Questions 5 and 6 of Section 13 of the Household Survey.
 - Whole days without food (children in past 30 days) -- The number of days without food in the last 30 days by children less than 14 years of age, as measured in Questions 7 and 8 of Section 13 of the Household Survey.
 - Eat less preferred/cheaper foods (in past 30 days) -- The number of times household members have eaten less preferred or cheaper foods in the last 30 days, as measured in Questions 9 and 10 of Section 13 of the Household Survey.

- Rely on help from others for food (past 30 days) -- The number of times household members have to borrow food or rely on help from a neighbor or relative in the last 30 days, as measured in Questions 11 and 12 of Section 13 of the Household Survey.
 - Purchase food on credit (past 30 days) -- The number of times the household has had to purchase food on credit in the last 30 days, as measured in Questions 13 and 14 of Section 13 of the Household Survey.
 - Gather wild food (past 30 days) -- The number of times the household has had to hunt or gather wild food in the last 30 days, as measured in Questions 15 and 16 of Section 13 of the Household Survey.
 - Beg for food (past 30 days) -- The number of times the household has had to beg for food in the last 30 days, as measured in Questions 17 and 18 of Section 13 of the Household Survey.
 - All members usually eat two meals -- Indicator variable equal to 1 if yes response to Question 19 of Section 11 of the Household Survey.
 - All members usually eat until content -- Indicator variable equal to 1 if yes response to Question 20 of Section 13 of the Household Survey.
 - Ate fish or meat in last week -- The number of times the respondent ate fish, meat, or eggs in the last 7 days, as measured in Question 21 of Section 13 of the Household Survey.
 - Enough food in house for tomorrow -- Indicator variable equal to 1 if the household has enough food in it for tomorrow, as measure in Question 22 of Section 13 of the Household Survey.
- *School attendance rate (in the last 7 days).* 0 for children not attending school. Endline Child Survey, Section 1 Question 20 / Child Survey Question 21 if attend school.

Secondary outcomes:

- *Value of durable goods.* PPP adjusted US Dollar value of non-land assets (house, telephones, sofa, chairs, tables, clocks/watches, bicycles, tricycles, motorbikes, boats, other motorized vehicles, radio or CD player, beds, mattresses, solar panels, generators, televisions, VCR/DVD, computer, farm tools, wheelbarrow, car, kerosene or propane stove, refrigerator, washing machine, air conditioner, electric fan, fishing net, pedicab, and rice stocks), as defined in Questions 41, 43, and 46-77 of Section 9 of the Endline Household Survey.
- *Attends school.* Indicator that Question 20 of Section 1 of Endline Child Survey is greater than 0.
- *Behind grade.* Indicator that response to Question 18 of Section 1 of the Endline Child Survey is less than child age minus 6.

Appendix C.3 Detailed definitions for hypotheses 3 and 4

Primary outcomes:

- *Child labor in the last 12 months.* Child labor is defined using the official Philippines definition below collected from a household based survey.

Legal Background

Project definitions of child labor are based on definitions set by the evaluation partner, DOLE, as they are implemented in the Philippine context. DOLE defines child labor on the basis of Philippine Republic Act Nos. 9231 and 7610 and ILO Convention 182 or the Worst Forms of Child Labor Conventions. Child labor is referred to as “any work or economic activity performed by a child that subjects him/her to any form of exploitation or is harmful to his/her health and safety or physical, mental or psychosocial development.”

Republic Act 7610 defines children as “persons below eighteen (18) years of age or those over but are unable to fully take care of themselves or protect themselves from abuse, neglect, cruelty, exploitation or discrimination because of a physical or mental disability or condition.”

Section 3 of Republic Act No. 9231 enumerates the worst forms of Child labor:

- (1) all forms of slavery, as defined under the "Anti-Trafficking in Persons Act of 2003", or practices similar to slavery, such as sale and trafficking of children, debt bondage and serfdom and forced or compulsory labor, including recruitment of children for use in armed conflict;
- (2) use, procuring, offering or exposing of a child for prostitution, for the production of pornography, or for pornographic performances;
- (3) use, procuring, or offering of a child for illegal or illicit activities, including the production and trafficking of dangerous drugs and volatile substances prohibited under existing laws; and
- (4) work which, by its nature or the circumstances in which it is carried out, is hazardous or likely to be harmful to the health, safety or morals of children.

It should be noted that in the Philippines, it is not considered child labor if children aged 15 years to below 18 years of age work if the following conditions are met: a) not more than eight (8) hours a day, b) not beyond forty (40) hours a week, c) not during 10:00 pm to 6:00 am the following day. It is required that if they do work under these circumstances, they should be provided with elementary and secondary education.

Children below age 15 may be economically active if the child is supervised by a senior family member such as a parent, if the child works in a location where only member of the child’s family are employed, if the work is not hazardous, if the child attends school, and if the child’s employer has a work permit for the child.

Implementation

The project codes children below the age of 18 as child laborers if they meet *any* of the following criteria (definitions defined below):

- A child participates in hazardous economic activity
- A child is potentially a bonded laborer
- A child is potentially a trafficked person and in the household roster¹⁷
- A child is economically active and reports more than 8 hours a day in a typical day last week
- A child is working more than full time
- A child is economically active and does not attend school

The project codes children below the age of 15 as a child laborer if they meet any of the above criteria. In addition, a child below the age of 15 is a child laborer if they are economically active unless the economically active child satisfies *all* of the following criteria:

- The child is economically active in a location where only family members are employed¹⁸ (Section 3, Question 24)
 - The child does not participate in a hazardous activity
 - The child is not potentially a bonded laborer
 - The child is not potentially a trafficked person
 - The child does not report more than 8 hours a day in economic activity in a typical day last week (Section 2, Questions 12, 15, 21, 24, 27, 30, 33, 36, 39, 42, and 45)
 - The child does not engage in economic activity between the hours of 10pm and 6am in a typical day last week (Section 3, Question 1)
 - The child is not economically active for more than 40 hours per week according to the household roster response (Section 8, Question 18 of the Endline Household Survey)
 - The child attends school (see above)
-
- *Child economically active in last 7 days.* The U.N System of National Accounts defines economic activity as all production that could be destined for the market, regardless of whether the decision is made to sell or retained for own use. Thus, economic activity occurs both inside and outside of the home, regardless of whether the good or service produced is sold in the market. It includes collection activities such as the collection of wood or water. A child is employed if the child answers any days in the last 7 days or hours in the last 7 days (Questions 11, 12, 14, 15, 20, 21, 23, 24, 26, 27, 29, 30, 32, 33, 35, 36, 38, 39, 41, 42, 44, 45, Section 2 of the Endline Child Survey).
 - *Child works for pay.* A child works for pay if the child answers positive days or positive hours to Questions 23 and 26 in Section 2 of the Endline Child Survey.

¹⁷ Children recorded in the migrant survey alone cannot be included in the child labor definition as we do not have enough information to identify whether they are child laborers in the location where they reside.

¹⁸ As we do not anticipate contact with child employers where work permits would be required, we do not ask about the work permit status of employment.

Secondary outcomes:

- *Child is in hazardous child labor.* Child is in Hazardous Child Labor (Last 12 months) -- a child participates in hazardous economic activity if any of the following are true:
 - The child's work code in answer to Questions 52, 54, 56, or 58 of Section 2 of the Child Survey is on the list of hazardous occupations (<http://www.oshc.dole.gov.ph/330/>) or indicates begging or scavenging work:
 - Deep-Sea Fishermen
 - Mining And Quarrying Including Gold Extraction
 - Manufacturing Pyrotechnics
 - Street Work Including Scavenging And Begging
 - Scavenging In Dumpsites
 - Commercial Sexual Activity
 - Artistic and Entertainment Associate Professionals (Entertainers)
 - Plumbers
 - Brick making
 - Extraction of lard/oil
 - Vulcanizing (rubber workers)
 - Grain mill workers
 - Heavy Equipment Operator (ie., bulldozer operator)
 - Guard
 - Firefighter
 - Blacksmiths, Tool-Makers And Related Trades Workers
 - Charcoal Makers And Related Workers
 - Loggers
 - Garbage Collectors And Related Laborers
 - Handicraft Workers In Wood, Textile, Leather, Chemicals And Related Workers
 - Hotel Housekeepers And Restaurant Services Workers
 - Machinery Mechanics, Fitters And Related Trades Workers
 - Metal Molders, Welders, Sheet-Metal Workers, Structural-Metal Preparers And Related Trades Workers
 - Motor Vehicle Drivers
 - Shotfirers, Stone Cutters And Carvers
 - Textile, Garment And Related Trades Workers
 - Wood Treaters, Cabinet Makers And Related Trades Workers
 - The child answers yes to any one of the following questions about their experiences while working over the last 12 months:
 - Was any of this work done after the sunset or before sunrise?
 - Do you ever have problems seeing while doing any of this work because of inadequate lighting?

- Are there loud noises from machinery or people when you do this work?
 - Have you ever had to do this work in extreme temperatures or in a setting with poor ventilation?
 - Have you worked in an environment with lots of dust or debris?
 - Do you carry heavy loads while doing this work?
 - Do you operate any machinery or heavy equipment in this work?
 - Do you operate a motor vehicle in this work?
 - Are you ever exposed to an open flame or need to be concerned about being burned in this work?
 - Have you been injured while doing any of this work?
 - Do you handle any chemicals or toxic substances in this work including pesticides or fertilizers?
 - Do you wear protective gear such as gloves and masks when working with these chemicals?
 - Have you noticed headaches, skin problem, breathing problems, stomach problems, or a general feeling of unwellness after doing this work?
 - Do you think any of the work you've done is hazardous or dangerous to you?
- *Child employed in family based economic activity (in the last 7 days):* A child is employed in a household based economic activity if the child answers any days in the last 7 days or hours in the last 7 days (Questions 11, 12, 14, 15, 20, 21, 29, 30, 32, 33, 35, or 36 of Section 2 of the Endline Child Survey).
 - *Child works outside the family (in the last 7 days).* A child is employed in economic activity outside the family if the child answers any days in the last 7 days or hours in the last 7 days (Questions 23, 24, 26, 27, 38, or 39 of Section 2 of the Endline Child Survey).
 - *Child collects wood or water (in the last 7 days).* A child is employed in collection activities if the child answers any days in the last 7 days or hours in the last 7 days (Question 21 of Section 2 of the Endline Child Survey).
 - *Hours employed (in the last 7 days):* The sum of answers to hours worked in the last 7 days (Questions 12, 15, 21, 24, 27, 30, 33, 39, 42, 45 of Section 2 of the Endline Child Survey).
 - *Hours in unpaid household services (in the last 7 days):* Codes similar to hours employed except for activities that meet the definition of unpaid household services (Questions 3, 6, 9, and 18 of Section 2 of the Endline Child Survey).
 - *Child in forced or bonded labor.* Bonded labor is defined as an indicator that is 1 if the child works around non-family members (YES to Question 23 of Section 3 of the Child Survey) or works outside of his family dwelling or field (Answer to Question 21 of Section 3 of the Child Survey is not family dwelling (1) or family field (2)) and meets any of the following criteria:
 - Child is unable to take days off work (Answer to Section 3, Question 25 is NO)

- Child cannot refuse tasks at work (Answer to Section 3, Question 23 is NO)
 - Child is unable to leave work because of debt owed (Answer to Section 3, Question 27 is NO and Answer to Question 29 is Yes)
 - Child is unable to leave work because family would be punished (Answer to Section 3, Question 27 is NO and Answer to Question 31 is Yes)
 - Child is not paid for work (Answer to 44 is Yes)
 - All income is turned over to others (Answer to 47 is 1)
- *Child is trafficked.* A child is potentially a trafficked person, where a child is coded as trafficked if the child is not born in the community (Question 2 of Section 3 of the Household Survey is NO), the child does not have a parent present (Question 25 and 35 of Section 4 of the Household Survey are both NO), the child does not attend school (Question 4 of Section 4 of the Household Survey is NO), and the child meets any of the following criteria:
 - Child is unable to take days off work work (Answer to Section 3, Question 25 is NO)
 -
 - Child cannot refuse tasks at work (Answer to Section 3, Question 23 is NO)
 - Child is unable to leave work because of debt owed (Answer to Section 3, Question 27 is NO and Answer to Question 29 is Yes)
 - Child is unable to leave work because family would be punished (Answer to Section 3, Question 27 is NO and Answer to Question 31 is Yes)
 - Child is not paid for work (Answer to 44 is Yes)
 - All income is turned over to others (Answer to 47 is 1)

Appendix C.4 Detailed definitions for child well-being variables

- *Child Well-Being Index.* Weighted standardized average of the following variables, following Anderson (2008). All variables below will be defined so a positive outcome is the “better” outcome. All variables examined as part of the combined index as well as individually.
 - *Cantril's ladder.* Child’s self-reported life satisfaction, scaled from 1 to 10. (based on Section 4, Question 1 of the Endline Child Survey.)
 - *Thriving.* Indicator variable equal to 1 if score is greater than or equal to 7. (not included in the index).
 - *Suffering.* Indicator variable equal to 1 if score is less than or equal to 4. (not included in the index).
 - *Attentiveness.* Equals 1 if enumerator responds that child is not frequently or often drifting off during interview. (based on Section 5, Question 1 of the Endline Child Survey).
 - *Carefulness.* Equals 1 if enumerator responds that child is not reported as unfocused or careless at times. (based on Section 5, Question 2 of the Endline Child Survey).

- *Engagement*. Equals 1 if enumerator responds that child is not difficult to engage or in need of frequent encouragement. (based on Section 5, Question 3 of the Endline Child Survey).
- *Non-Shy*. Equals 1 if enumerator responds that child is not reported as shy or hesitant to speak. (based on Section 5, Question 4 of the Endline Child Survey).
- *Care Index score with Mother and Father Figure (each separately)*. The following questions are scored positively so that the “Very Like” response is given a 3 and the “Very Unlike” response is a 0: Section 4, questions 50, 54, 55, 60, 61, 66 for mothers / 77, 81, 82, 87, 88, 92, for fathers. The following questions are scored negatively so that the “Very Like” response is given a 0 and the “Very Unlike” response is a 3: Section 4, questions 51, 53, 63, 65, 67, 73 for mothers / 78, 80, 90, 92, 94, 100 for fathers.
- *Huebner's Student Life Satisfaction Score*. Aggregated as per Huebner (1991) summing the scores across all 7 questions. (based on Section 4, Questions 2-8 of the Endline Child Survey).
- *Reports having Short Term goal*. Indicator variable equal to 1 if child reports a short term goal. (based on Section 4, Question 9 of the Endline Child Survey).
- *Reports having Long Term goal*. Indicator variable equal to 1 if child reports a long term goal. (based on Section 4, Question 11 of the Endline Child Survey).
- *Score on the Center for Epidemiological Studies Depression Scale for Children*. Scored as per instructions in Radloff (1977). (based on Section 4, Questions 28-47 of the Endline Child Survey).
- *Caregiver's assessment of child's strengths and difficulties*. Using Goodman's (1997) Strength and Difficulties Questionnaire (SDQ) instrument and scored as per instructions. (based on Section 4, Questions 2, 3, 5, 6, 7, 8, 10, 11, 12, 13, 14, 15, 18, 19, 20, and 21).

Appendix D : Balance Tables by Subgroup

Appendix D - 1. Balance of Baseline Variables for Children Engaged in Child Labor			
Variable	Treatment Mean	Control Mean	Difference
Age	13.19 (2.17)	13.16 (2.20)	0.03 (0.07)
Child is female	0.41 (0.49)	0.41 (0.49)	0.00 (0.02)
School attendance rate of child over last 7 days	0.43 (0.45)	0.41 (0.45)	0.01 (0.05)
Child is grade(s) behind	0.04 (0.20)	0.04 (0.20)	-0.00 (0.01)
Child is economically active in last 7 days	0.97 (0.18)	0.95 (0.22)	0.02** (0.01)
Respondent is female	0.81 (0.39)	0.82 (0.38)	-0.01 (0.02)
Household size	6.78 (2.18)	6.98 (2.30)	-0.20 (0.16)
Household receives other government transfers in last 12 months	0.06 (0.24)	0.07 (0.25)	-0.01 (0.01)
Household reports family firm in last 12 months	0.65 (0.48)	0.65 (0.48)	0.01 (0.04)
Family firm generated income in last 12 months (PPP adjusted)	726.75 (3691.55)	338.95 (17627.07)	387.80 (512.10)
Food expenditure as a share of non-durable expenditure in past 30 days	0.64 (0.15)	0.64 (0.16)	0.00 (0.01)
ln(Total monthly household expenditure per capita)	4.28 (0.56)	4.27 (0.62)	0.01 (0.04)
Household has savings	0.35 (0.48)	0.35 (0.48)	-0.01 (0.04)
Household has loans	0.79 (0.41)	0.78 (0.41)	0.01 (0.02)
Household had a shock in last 12 months	0.66 (0.48)	0.66 (0.47)	-0.00 (0.03)
Household had an illness in past 30 days	0.21 (0.41)	0.20 (0.40)	0.01 (0.02)
Household has outmigrants in last 24 months	0.18 (0.38)	0.20 (0.40)	-0.02 (0.02)
Barangay population (2010 Census)	3594.19 (3611.95)	3173.65 (3369.71)	420.54 (537.30)
Food Security Index	-0.03 (0.45)	-0.03 (0.46)	-0.01 (0.03)

F-statistic on test of joint significance	0.93
p-value on test of joint significance	0.548

The sample includes children 10-17 interviewed in the baseline child survey that were engaged in child labor. Columns 1 and 2 report the mean of the variable for the treatment and control groups respectively. Column 3 reports the difference (Column 1 - Column 2). Standard errors are in parentheses. The final two rows of the table report the omnibus F-test of the joint significance of all the differences in the column above and the associated p-value. Indices are created following Anderson (2008)'s approach. The standard deviation of an index created is not mechanically 1 because of weighting by the inverse of the covariance matrix in index construction.

***p<0.01, **p<0.05, *p<0.10.

Appendix D - 2. Balance of Baseline Variables for Children Not Engaged in Child Labor

Variable	Treatment Mean	Control Mean	Difference
Age at Baseline, Corrected	13.68 (2.18)	13.54 (2.24)	0.14 (0.14)
Child is female	0.60 (0.49)	0.62 (0.49)	-0.02 (0.03)
School attendance rate of child over last 7 days	0.58 (0.45)	0.56 (0.46)	0.02 (0.06)
Child is grade(s) behind	0.03 (0.18)	0.04 (0.19)	-0.01 (0.01)
Child is economically active in last 7 days	0.50 (0.50)	0.44 (0.50)	0.07 (0.05)
Respondent is female	0.81 (0.40)	0.80 (0.40)	0.01 (0.03)
Household size	6.76 (2.31)	6.79 (2.22)	-0.03 (0.21)
Household receives other government transfers in last 12 months	0.08 (0.27)	0.06 (0.23)	0.02 (0.02)
Household reports family firm in last 12 months	0.56 (0.50)	0.51 (0.50)	0.05 (0.05)
Family firm generated income in last 12 months (PPP adjusted)	492.17 (1879.00)	513.95 (2899.49)	-21.77 (186.10)
Food expenditure as a share of non-durable expenditure in past 30 days	0.63 (0.15)	0.63 (0.14)	-0.01 (0.01)
ln(Total monthly household expenditure per capita)	4.36 (0.52)	4.35 (0.56)	0.00 (0.05)
Household has savings	0.34 (0.47)	0.31 (0.46)	0.03 (0.04)
Household has loans	0.76 (0.43)	0.76 (0.43)	-0.00 (0.03)
Household had a shock in last 12 months	0.58 (0.49)	0.62 (0.49)	-0.04 (0.04)
Household had an illness in past 30 days	0.16 (0.37)	0.17 (0.38)	-0.01 (0.03)
Household has outmigrants in last 24 months	0.15 (0.36)	0.15 (0.36)	-0.00 (0.03)
Barangay population (2010 Census)	3892.00 (3441.41)	4148.59 (4670.89)	-256.59 (793.13)
Food Security Index	0.00 (0.44)	0.04 (0.45)	-0.03 (0.04)
F-statistic on test of joint significance			0.58
p-value on test of joint significance			0.917

The sample includes children 10-17 interviewed in the baseline child survey that were not engaged in child labor. Columns 1 and 2 report the mean of the variable for the treatment and control groups respectively. Column 3 reports the difference (Column 1 - Column 2). Standard errors are in parentheses. The final two rows of the table report the omnibus F-test of the joint significance of all the differences in the column above and the associated p-value. Indices are created following Anderson (2008)'s approach. The standard deviation of an index created is not mechanically 1 because of weighting by the inverse of the covariance matrix in index construction. ***p<0.01, **p<0.05, *p<0.10.

Appendix D - 3. Balance by Rural and Urban Subgroups

Variable	Rural (T-C Difference)	Urban (T-C Difference)	Difference in Difference (Column 1 - Column 2)
Age of child	0.10 (0.07)	-0.05 (0.13)	0.14 (0.14)
Child is female	0.01 (0.02)	-0.04 (0.03)	0.04 (0.03)
School attendance rate of child over last 7 days	0.01 (0.06)	0.05 (0.09)	-0.04 (0.11)
Child is grade(s) behind	0.00 (0.01)	-0.01 (0.02)	0.01 (0.03)
Child is economically active in last 7 days	0.02 (0.02)	0.04 (0.05)	-0.02 (0.05)

F-statistic on test of joint significance	1.07	0.79	0.84
p-value on test of joint significance	0.392	0.716	0.762

The sample includes all children 10-17 interviewed in the baseline child survey. Columns 1 and 2 report the difference in the variable between treatment and control for the subgroup indicated by the column heading. Column 3 reports the difference in the two differences (Column 1-Column 2). Standard errors are in parentheses. The final two rows of the table report the F-test of the joint significance of all the differences in the column above. The standard deviation of an index created using Anderson (2008)'s approach is not mechanically 1 because of weighting by the inverse of the covariance matrix in index construction. ***p<0.01, **p<0.05, *p<0.10.

F-statistic on test of joint significance	3.01***	1.15	1.74***
p-value on test of joint significance	0.000	0.305	0.002

The sample includes all children 10-17 interviewed in the baseline child survey. Columns 1 and 2 report the difference in the variable between treatment and control for the subgroup indicated by the column heading. Column 3 reports the difference in the two differences (Column 1-Column 2). Standard errors are in parentheses. The final two rows of the table report the F-test of the joint significance of all the differences in the column above. The standard deviation of an index created using Anderson (2008)'s approach is not mechanically 1 because of weighting by the inverse of the covariance matrix in index construction. ***p<0.01, **p<0.05, *p<0.10.

Food Security Index	-0.01	-0.02	0.01
	(0.03)	(0.06)	(0.06)
F-statistic on test of joint significance	0.83	0.97	0.97
p-value on test of joint significance	0.679	0.509	0.524

The sample includes all children 10-17 interviewed in the baseline child survey. Columns 1 and 2 report the difference in the variable between treatment and control for the subgroup indicated by the column heading. Column 3 reports the difference in the two differences (Column 1-Column 2). Standard errors are in parentheses. The final two rows of the table report the F-test of the joint significance of all the differences in the column above. The standard deviation of an index created using Anderson (2008)'s approach is not mechanically 1 because of weighting by the inverse of the covariance matrix in index construction. ***p<0.01, **p<0.05, *p<0.10.

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Appendix E - 2. Effect of KASAMA on Key Outcomes by Complete and Incomplete 4Ps Subgroups

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Appendix E - 6. Effect of KASAMA on Key Outcomes by Number of Children in the Household Subgroups

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Appendix E - 7. Effect of KASAMA on Key Outcomes by Agricultural & Non-Agricultural Households Subgroups

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. . For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Appendix E - 10. Effect of KASAMA on Key Outcomes by Presence of Hazardous Child Labor in the Household Subgroups

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Appendix E - 13. Effect of KASAMA on Key Outcomes by Shocks Received by the Household in the las 12 Months Subgroups

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes		Yes	Yes
Baseline Controls		No	Yes		No	Yes

An observation is a child aged 10-17 at endline in Columns 1 and 4, and a child 12-17 observed in both baseline and endline in Columns 2, 3, 5, and 6. Column 1 and 4 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2, 3, 5, and 6 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2, 3, 5, and 6, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Appendix E - 17. Effect of KASAMA on Key Outcomes by Presence of Wage Employment in the Household Subgroups

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

Stratum Fixed Effects		Yes	Yes	Yes		Yes	Yes	Yes
Baseline Controls		No	No	Yes		No	No	Yes

An observation is a child aged 10-17 at endline in Columns 1, 2, 5, and 6, and a child 12-17 observed in both baseline and endline in Columns 3, 4, 7 and 8. For panel 4, an observation is a prime aged adult (age 25-50). Column 1 and 5 contain the mean of the outcome indicated by the row for the control group. Each cell in columns 2-4, and 6-8 reports the coefficient on an indicator that the individual is associated with a household in a community randomly assigned to receive KASAMA. For column 2 and 6, this means the individual at endline is living in a household that at baseline was in a community that was assigned treatment. For columns 3, 4, 7, and 8, this means that the child at baseline resided in a household that at baseline was in a community that was assigned treatment. Stratum fixed effects are dummies indicating which of the four strata that the child's household of residence resided in at baseline. Baseline controls are measured at baseline and include age*gender fixed effects and baseline values of the dependent variable, except for "Reports KASAMA" which is not available at baseline. Standard errors in parenthesis and clustered on unit of randomization throughout (Barangay).

<p>Instructions to Interviewer: Conduct this interview in private. Read the following statements to the respondent and answer any questions the individual may have. If the individual asks about the sponsorship of the study and how the findings will be used, read the explanation that has been provided to you. Do not begin the interview until all questions have been addressed and the individual has agreed to participate in the study.</p> <p>Hello, my name is _____. I am from Innovations for Poverty Action (IPA), a non-profit research organization dedicated to finding innovative solutions to development issues in various countries. I am visiting you today because we are conducting a study about household economic activity and welfare. The purpose of this survey is to better understand characteristics of households in [regions TDB], and also to learn relevant information about the economic activity of household members, including children. We hope our findings will help inform organizations working to support households like yours and to improve livelihoods throughout the Philippines.</p> <p>We would like to invite you to participate in this survey, which will ask questions regarding the composition of your household as well as the education, economic activity, income, and consumption of you and your household members. The survey will require approximately 90 minutes of your time. For participating in this survey, you will receive a small token gift. I or another member of our survey team will return in 24 months for a follow-up survey, but you can choose not to participate in the follow-up interview if you wish. This research will help us better understand the needs of the community in order to improve future interventions directed toward households in this region. You may experience distress over the nature of some of the questions, specifically those questions related to children in this household. Please know that all your answers will be kept confidential, and no names will be stored or published with survey responses. Only research staff will have access to any data that could potentially identify you.</p> <p>Participation in this study and in this interview is completely voluntary. You are free to decline to participate, to end participation at any time for any reason, or to refuse to answer any individual questions. There is no penalty for refusing to participate or to not answer any individual question.</p> <p>If you have any questions or concerns please contact me at 0921-210-4620 or IPA Country Director Nassreena Sampaco-Baddiri at (632) 900-6190.</p>				
takepart	Would you be willing to participate in the study?	YES / NO

Dta file name: ~/Baseline Household Survey/Section_1.dta				

Section 1: Household Roster				
Number	Question	Response	Notes	Relevance
I would like to begin by getting a sense of who is in the household. I consider someone a household member if they (1) sleep in the same housing unit and (2) have a common arrangement in the preparation and consumption of food. This includes individuals who are not currently in the household, but will return within 30 days of their initial departure, sleep in this housing unit, and have a common preparation/consumption of food.				
numinh	How many people live in this household, including you?	#		
Repeat for every household member				
name	What is the full name of household member [NUMBER]?	Text		
age	What is the age of [NAME]?	#		
gender	What is the gender of [NAME]?	Male/ Female		
relation	What is the relation of [NAME] to the respondent?	Relation Code		
Read this for every person: "I consider someone a household member if they (1) sleep in the same housing unit and (2) have a common arrangement in the preparation and consumption of food. This includes individuals who are not currently in the household, but will return within 30 days of their initial departure, sleep in this housing unit, and have a common preparation/consumption of food."				
meetsdef	Does [NAME] sleep in the same housing unit as other household members and have a common arrangement in the preparation of food?	YES/NO		

As mentioned previously, IPA is conducting research about household economic activity and welfare. To conduct this research, we are not only interviewing the heads of the household but also children between the ages of 10 and 17.

Thus, with your permission, we invite your child to participate in the part of this study that asks about the child's education, position in the household, allocation of time, perceptions, and a game where s/he is asked to trace basic shapes using a pencil and mirror. This interview will take about 20 minutes of your child's time. Your child's participation in this interview is completely voluntary. There is no penalty if you or your child refuse to participate.

Before you and your child decide whether s/he will be part of this study, it's important for all of you to understand why we're doing the research and what's involved. We encourage you to discuss the study with your child. If you or your child has questions about the research, feel free to ask us. In about two years, we will come back for a follow-up interview to ask the same questions again, and you and/or your child can choose to decline to participate for the follow-up interview as well.

You may find that the time and effort you take to be a participant in this study to be inconvenient. You may also find one or more of the questions that we ask to be upsetting. You or your child do not have to respond to any question that makes you feel uncomfortable, and you may end the interview at any time.

There is no individual benefit expected from your child's participation in this study. You will not be paid nor will you have to pay for your participation in this study. This study will help researchers learn how to improve the livelihoods of you and your children.

We will keep all the information your child shares with us confidential. The study team will make every effort to protect their privacy and maintain the confidentiality of all the information that they provide, though there is a risk that it may be lost. Only research staff will have access to the information gathered during our conversation and no personal identifiers will be connected to the data for analysis.

Child Consent: repeat for every HH member if age>=10 & age<=17				
slguard1	Is [NAME]'s Guardian a Member of Household?	YES/NO		
slguardy1	Who is he/she ?	HH Roster		slguard1=YES

Section 6: Land and Agriculture				
Number	Question	Response	Notes	Relevance
Now I would like to ask you some questions about how much and what you cultivate. [Explain to respondent that one acre = 64mx64m]				
Land				
s6q1	Does your household own the land you live on? In other words, you don't have a sharecropping arrangement, rent it, or have an arrangement where it must eventually be returned to someone.	YES/NO		
s6q2unit	What unit is the land measured in?	Land Unit Codes	33 Tupong = 1 Hectare	s6q1=YES
s6q2	How many units is this land?	#		s6q1=YES
s6q2a	Who owns this land?	Land Ownership Codes		s6q1=YES
s6q3	Does your household own any land separate from the land you live on? In other words, you don't have a sharecropping arrangement, rent it, or have an arrangement where it must eventually be returned to someone.	YES/NO		
s6q4	What unit is the land measured in? (Hectares, Acres, Tupong, Square Meters)	Land Unit Codes	33 Tupong = 1 Hectare	s6q3=YES
s6q4a	How many units is this land?	#		s6q3=YES
s6q5	Who owns this land?	Ownership Codes		s6q3=YES
s6q5_other	Specify other	Text		s6q5=Other
s6q6	In the past 12 months, did your household rent any land from someone outside your household?	YES/NO		

s6q7	How much did your household pay to rent this land in last 12 months (in Peso)?	#	In PHP	s6q6=YES
s6q8	In the past 12 months did your household sharecrop any land?	YES/NO		
s6q9	What was your household's share as a percentage of output?	#	% percentage	s6q8=YES
s6q9a	How much did your household earn from sharecropping?	#	In PHP	s6q8=YES
s6q10	In the past 12 months did your household rent any land to someone outside your household?	YES/NO		
s6q11	How much did your household receive as rental payment for this land in the last 12 months?	#	In PHP	s6q10=YES
s6qn16	In the past 12 months, did your household pawn or mortgage any land, meaning you allowed someone outside your household to cultivate your land in exchange for a loan?	YES/NO		
Crops				
s6q12	Did you cultivate (harvest) anything in the last 12 months? (1=Yes 0=No)	YES/NO		
s6q12count	How many crops did you grow In the last 12 months?	Integer		s6q12=YES
REPEAT FOR EVERY CROP GROWN (s6q12=YES)				
s6q13	What crop did your household cultivate in the last 12 months?	Crops Codes		s6q12=YES
s6q14	Specify other	Text		s6q13=Other and s6q12=YES
s6q15a	Was this crop cultivated on sharecropped land?	YES/NO/PARTIALLY		s6q12=YES and s6q8=YES
s6q15b	Specify % of crop cultivated on sharecropped land	#	% percentage	s6q15a=PARTIALLY

s6q15	Was any startup capital needed to start these crops?	YES/NO		s6q12=YES
s6q16	What was the main source of start-up capital (such as money or goods) for these crops (codes)?	Capital/Item source Codes		s6q12=YES and s6q15=YES
s6q16other	Specify other	Text		s6q16=Other
s6q17	How much was this start-up capital	#	In PHP	s6q12=YES and s6q15=YES
s6q19	What is the quantity of the crop harvested in the last 12 months? Please give the raw output, before any value-added activities were conducted.	#	In PHP	s6q12=YES
s6q18	How is crop quantity measured?	Crop Unit Codes		s6q12=YES
s6q18other	Specify other	Text		s6q18=Other
s6q19a	How many kilograms are in one unit?	#	Enter kilograms	s6q18=2 or s6q18=3 or s6q18=4 or s6q18=5 or s6q18=6 or s6q18=7 or s6q18=8 or s6q18=10 or s6q18=11 or s6q18=12 or s6q18=13 or s6q18=14 or s6q18=15 or s6q18=16 or s6q18=-888
s6q20	What is the total market value of the quantity harvested in the last 12 months?	#	Regardless of whether it was sold or own-consumed	s6q12=YES

s6q21	What was the total revenue received from this crop harvest (sold in market transactions) in the last 12 months?	#	In PHP	s6q12=YES
Farming Inputs				
s6q22	In the last 12 months, how much in total did your household spend on Seeds ?	#	In PHP	s6q12=YES
s6q23	Is the household using more or less Seeds compared to two years ago?	More/Less Quantity Codes		s6q12=YES
s6q23new	Is the new input of higher value than the input used before?	More/Less Value Codes		s6q23="Different type of input"
s6q24	In the last 12 months, how much in total did your household spend on Fertilizers/herbicides/pesticides ?	#	In PHP	s6q12=YES
s6q25	Is the household using more or less Fertilizers/ herbicides/ pesticides compared to two years ago?	More/Less Quantity Codes		s6q12=YES
s6q25new	Is the new input of higher value than the input used before?	More/Less Value Codes		s6q25="Different type of input"
s6q26	In the last 12 months, how much in total did your household spend on Hire machines (e.g. for plowing or spraying)?	#	In PHP	s6q12=YES
s6q27	Is the household using more or less Hire machines (e.g. for plowing or spraying) compared to two years ago?	More/Less Quantity Codes		s6q12=YES
s6q27new	Is the new input of higher value than the input used before?	More/Less Value Codes		s6q27="Different type of input"
s6q28	In the last 12 months, how much in total did your household spend on Water (including irrigation water)?	#	In PHP	s6q12=YES

s6q29	Is the household using more or less Water (including irrigation water) compared to two years ago?	More/Less Quantity Codes		s6q12=YES
s6q29new	Is the new input of higher value than the input used before?	More/Less Value Codes		s6q29="Different type of input"
s6q30	In the last 12 months, how much in total did your household spend on Hiring Labor ?	#	In PHP	s6q12=YES
s6q31	Is the household using more or less Hiring Labor compared to two years ago?	More/Less Quantity Codes		s6q12=YES
s6q31new	Is the new input of higher value than the input used before?	More/Less Value Codes		s6q31="Different type of input"
s6q32	In the last 12 months, how much in total did your household spend on Other expenses ?	#	In PHP	s6q12=YES
s6q33	Specify which expenses:	Text		\${s6q12}=1 and \${s6q32}>0
s6q34	Is the household using more or less Other expenses compared to two years ago?	More/Less Quantity Codes		s6q12=YES
s6q34new	Is the new input of higher value than the input used before?	More/Less Value Codes		s6q34="Different type of input"
s6q35	What are your household's total profits from farming in the last 12 months?	#	Revenue less expenses across all crops	s6q12=YES

Dta file name: ~/Baseline Household Survey/Section_7.dta				
Section 7: Livestock				
Number	Question	Response	Notes	Relevance
I will now ask you some questions about your livestock.				
Large Livestock (Cattle, Carabao)				
s7q1	How many large livestock (cows, bulls, calves, horses etc.) does your household own, meaning someone in your household have the authority to sell them?	#		
s7q2	How many large livestock (cows, bulls, calves, horses, etc.) does your household rent or lease?	#		
s7q3	How many large livestock does your household manage/take care of which it neither owns nor leases?	#		
Large Livestock: Continue if s7q1>0 or s7q2>0 or s7q3>0				
s7q4	Was any startup capital needed to get these livestock?	YES/NO		
s7q5	What was the main source of start-up capital (such as money or goods) for these livestock (codes)?	Capital/Item source Codes		s7q4=YES
s7q5other	Specify other	Text		s7q5=Other
s7q6	How much was this start-up capital?	#		s7q4=YES
s7q7	In the past 12 months, how many liters of milk did your large livestock produce?	#		
s7q8	What is the total market value of this number of litres of milk regardless of whether the milk was sold or own-consumed?	#		s7q7>0
s7q9	What was the total revenue receive from sales of this milk (sold)?	#		s7q7>0

s7q10	In the past 12 months, how much have you spent to care for these large livestock (e.g. on fodder, veterinary care, etc.)?	#	In PHP	
s7q11	In the past 12 months have you received any other income from these large livestock (excluding the sale of the animals or calves), such as from animal products (e.g. manure), by leasing the animals, etc.?	YES/NO	[EXCLUDING INCOME FROM MILK]	
s7q12	How much income have you received?	#		s7q11=YES
s7q13	In the past 12 months have you consumed any such additional animal products yourselves?	YES/NO		
s7q14	What is the total market value of these additional animal products that you consumed?	#	In PHP	s7q13=YES
s7q15	In the past 12 months, how many large livestock have you sold?	#		
s7q16	How much did you earn from these sales in total?	#	In PHP	s7q15>0
s7q17	In the past 12 months how many large animals have you butchered?	#		
s7q18	What is the total market value of this butchered meat regardless of whether you sold it or consumed it yourself?	#	In PHP	s7q17>0
s7q19	What was the total revenue from sales of this butchered meat?	#	In PHP	s7q17>0
Small Livestock				
s7q20	How many small livestock (goats, sheep, pigs, etc.) does your household own, meaning someone in your household have the authority to sell them?	#		

s7q21	How many small livestock (goats, sheep, pigs, etc.) does your household rent or lease?	#		
s7q22	How many small livestock (goats, sheep, pigs, etc.) does your household take care of which it neither owns nor leases?	#		
Small Livestock: Continue if s7q20>0 or s7q21>0 or s7q22>0				
s7q23	Was any startup capital needed to get these livestock?	YES/NO		
s7q24	What was the main source of start-up capital (such as money or goods) for these livestock (codes)?	Capital/Item source Codes		s7q23=YES
s7q24other	Specify other	Text		s7q24=Other
s7q25	How much was this start-up capital?	#		s7q23=YES
s7q26	In the past 12 months, how much have you spent to care for these small livestock (e.g. on fodder, veterinary care, etc.)?	#		
s7q27	In the past 12 months have you received any other income from these small livestock (excluding the sale of the animals or calves), such as from wool or other products?	YES/NO		
s7q28	How much income?	#	In PHP	s7q27=YES
s7q29	In the past 12 months have you consumed any such additional animal products yourselves?	YES/NO		
s7q30	What is the total market value of these additional animal products that you consumed?	#		s7q29=YES
s7q31	In the past 12 months, how many small livestock have you sold?	#		
s7q32	How much did you earn from these sales in total?	#	In PHP	s7q31>0

s7q33	In the past 12 months how many small livestock have you butchered?	#		
s7q34	What is the total market value of this butchered meat regardless of whether you consumed it yourself or sold it?	#	In PHP	s7q33>0
s7q35	What was the total revenue from sales of this butchered meat (sold)?	#	In PHP	s7q33>0
Birds				
s7q36	How many birds (chicken, ducks, quail, roosters/fighting cocks, etc.) does your household own, meaning someone in your household have the authority to sell them?	#		
s7q37	How many birds (chicken, ducks, quail, roosters/fighting cocks, etc.) does your household rent or lease?	#		
s7q38	How many birds (chicken, ducks, quail, roosters/fighting cocks, etc.) does your household take care of which it neither owns nor leases?	#		
Birds: Continue if s7q36>0 or s7q37>0 or s7q38>0				
s7q39	Was any startup capital needed to get these livestock?	YES/NO		
s7q40	What was the main source of start-up capital (such as money or goods) for these livestock (codes)?	Capital/Item source Codes		s7q39=YES
s7q40other	Specify other	Text		s7q40=Other
s7q41	How much was this start-up capital?	#		s7q39=YES
s7q42b	In the past 12 months have you received any other income from these BIRDS (excluding the sale of the animals or CHICKS), such as EARNINGS FROM COCK-FIGHTS?	YES/NO		
s7q42c	How much did you earn in other income?	#		s7q42c=YES

s7q42	In the past 12 months, how many eggs have your birds produced?	#		
s7q43	What is the total market value of these eggs?	#	In PHP	s7q42>0
s7q44	What was the total revenue from these eggs (sold)?	#	In PHP	s7q42>0
s7q45	In the past 12 months, how much have you spent to care for these birds (e.g. on bird feed, veterinary care, etc.)?	#	In PHP	
s7q46	In the past 12 months, how many birds have you sold?	#		
s7q47	How much did you earn from these sales in total?	Integer	In PHP	s7q46>0
s7q48	In the past 12 months how many birds of yours have you butchered?	Integer		
s7q48a	In the past 12 months, what was the average weight of a bird of yours that you butchered (in kgs)?	Integer	In kgs	
s7q49	What is the total market value of these butchered birds regardless of whether you sold them or consumed them yourselves?	Integer	In PHP	s7q48>0
s7q50	What was the total revenue from sales of these butchered birds (sold)?	Integer	In PHP	s7q48>0

Dta file name: ~/Baseline Household Survey/Section_8.dta				
Section 8: Enterprises				
Number	Question	Response	Notes	Relevance
Now I would like to ask you questions about non-agricultural business activities your household engages in.				
s8q1	Does anyone in this household fully, or partly, own and operate one or more non-agricultural, non-livestock income generating activities?	YES/NO		
REPEATS OVER ALL NON-FARM ENTERPRISES (s8q1=YES)				
s8q2	What is the nature of this enterprise?	Enterprise Codes		
s8q2_other	Specify other	Text		s8q2=Other
s8q3	In the last 12 months, how many months did the household operate this enterprise?	#		
s8q4	How many months ago was this enterprise first started?	#		
s8q5	Who was the principal operator of this enterprise when it first started? (Person ID from roster)	HH roster list		
s8q5a	Who decides how to allocate the profits from this enterprise?	Relation Codes		
s8q6	Was any startup capital needed to start this enterprise?	YES/NO		
s8q7	What was the main source of start-up capital (such as money or goods) for this enterprise?	Capital/Item source Codes		s8q6=YES
s8q7_other	Specify other	Text		s8q7=Other
s8q8	How much was this start-up capital	#		s8q6=YES

s8q9	In the last 12 months what was spent on machinery or durable goods (e.g., tools, cooking pots, ovens, sewing machines) for this enterprise?	#		
s8q10	What was the main source of money used to purchase these goods?	Capital/Item source Codes		s8q9>0
s8q10_other	Specify other	Text		s8q10=Other
s8q11	How many employees in this enterprise are not household members?	#		
Costs: In the last 12 months what was spent for this enterprise on:				
s8q12	Electricity	#	In PHP	
s8q13	Salaries/Wages	#	In PHP	
s8q14	Water	#	In PHP	
s8q15	Transport	#	In PHP	
s8q16	Purchase of inputs, inventory, and products	#	In PHP	
s8q17	Other costs (exclude machinery, tools, durables already mentioned)	#	In PHP	
s8q18	Please specify what some of these other costs were	Text		s8q17>0
s8q19	What was the main source of money used to cover these costs?	Capital/Item source Codes		
s8q19_other	Specify other	Text		s8q19=Other
s8q20	What was the total revenue received from this enterprise in the last 12 months?	#	In PHP	
s8q21	What are the sales of this enterprise in an average month?	#	In PHP	
s8q22	In the last twelve months did this enterprise earn a profit (1), make a loss (2), or break even (3)?	Business Codes		
s8q23	In the last twelve months, what was the amount your household earned as profit or lost from this enterprise?	#	In PHP	

Dta file name: ~/Baseline Household Survey/Section_9.dta				
Section 9: Consumption				
Number	Question	Response	Notes	Relevance
Now I would like to ask you questions about how you spent money in the last few months [DO NOT INCLUDE BUSINESS EXPENSES HERE]				
<i>Food (for each item read list and calculate total)</i>				
s9q1a	Did your HH consume Bread and Cereals in the past 7 days?	YES/NO	Rice (in all forms) Corn (On cob, grain, grits, other) Wheat Flour Maize Flour Flakes Native cakes (Puto, Bibingka, Biki, Suman, etc) Other cereal preparation (infant food, junk food, soup mix, etc) Loaf Bread Pandesal Cookies, cakes, pies Crackers Biscuits Pasta (spaghetti, noodles)	

s9q1	In the last 7 days how much did the household spend on Bread and Cereals?	#	In PHP	s9q1a=YES
s9q2a	Did your HH consume Roots and tubers in the past 7 days?	YES/NO	Potatoes, Camote, Cassava, Gabi, Ube, French Fries, potato chips, Cassava Cakes, Haleya	
s9q2	In the last 7 days how much did the household spend on Roots and tubers?	#	In PHP	s9q2a=YES
s9q3a	Did your HH consume Vegetables in the past 7 days?	YES/NO	Cabbage Ampalaya leaves Kangkong Malunggay leaves Pechay Ampalaya Eggplant Squash Okra Pickled vegetables Tomato Beans and legumes (stringbeans, mongo, togue, etc) Onions Carrots Raddish Garlic Tugui Tokwa, Tausi, Miso	

s9q3	In the last 7 days how much did the household spend on Vegetables?	#	In PHP	s9q3a=YES
s9q4a	Did your HH consume Meat in the past 7 days?	YES/NO	Beef Pork Goat Chicken Edible Offal (Gizzard, Liver, Etc.) Dried, Salted, or Smoked Meat Preserved or Processed Meat (Tocino, Tapa, Longaniza, etc)	
s9q4	In the last 7 days how much did the household spend on Meat?	#	In PHP	s9q4a=YES
s9q5a	Did your HH consume Fish in the past 7 days?	YES/NO	Fresh Fish Dried, Smoked, or Salted Fish Frozen Fish Prawns/Lobster Preserved, Canned, or Bottled	
s9q5	In the last 7 days how much did the household spend on Fish?	#	In PHP	s9q5a=YES

s9q6a	Did your HH consume Dairy products and eggs in the past 7 days?	YES/NO	Raw Milk Condensed, Evaporated, or Powdered milk Yoghurt, cream, milk based dessert Milk based beverages and other milk-based products Soya Milk Cheese and Curd Eggs	
s9q6	In the last 7 days how much did the household spend on Dairy products and eggs?	#	In PHP	s9q6a=YES
s9q7a	Did your HH consume Oils and fats in the past 7 days?	YES/NO	Butter and butter products Margarine Corn Oil Coconut oil including milk Other edible oils Lard (Animal fat) Peanut butter	
s9q7	In the last 7 days how much did the household spend on Oils and fats?	#	In PHP	s9q7a=YES

s9q8a	Did your HH consume Fruits in the past 7 days?	YES/NO	Pineapple Mango Banana Papaya Dalanghita Peanut Cashew nut Coconut Fruit Cocktail Kaong preserves Nata de coco Calamansi	
s9q8	In the last 7 days how much did the household spend on Fruits?	#	In PHP	s9q8a=YES
s9q9a	Did your HH consume Sugar, Jam, honey, sweets, candies in the past 7 days?	YES/NO	Sugar Jam, Jelly, Marmalade Honey Chocolate Ice cream, sorbet, edible ice	
s9q9	In the last 7 days how much did the household spend on Sugar, Jam, honey, sweets, and candies?	#	In PHP	s9q9a=YES

s9q10a	Did your HH consume Non-alcoholic drinks in the past 7 days?	YES/NO	Mineral or spring water, all drinking water sold in containers Soft drinks Fruits and Vegetables Juices, Powder Concentrates and Ready to Drink Juice Coffee Tea Cocoa	
s9q10	In the last 7 days how much did the household spend on Non-alcoholic drinks?	#	In PHP	s9q10a=YES
s9q11a	Did your HH consume Alcoholic drinks in the past 7 days?	YES/NO	Liquor Wine Beer	
s9q11	In the last 7 days how much did the household spend on Alcoholic drinks?	#	In PHP	s9q11a=YES
s9q12a	Did your HH consume Tobacco in the past 7 days?	YES/NO	Cigarettes Cigars Chewing tobacco	
s9q12	In the last 7 days how much did the household spend on Tobacco?	#	In PHP	s9q12a=YES

s9q13a	Did your HH consume Spices and condiments in the past 7 days?	YES/NO	Salt Pepper Pimenta Ginger Vetsin, Laurel Soya Sauce Tomato catsup Banana Catsup Patis Salad dressing and mayonnaise Vinegar Sugar Jam, Jelly, Marmalade Honey Chocolate Ice cream, sorbet, edible ice	
s9q13	In the last 7 days how much did the household spend on Spices and condiments?	#	In PHP	s9q13a=YES
s9q14a	Did your HH consume Prepared foods in the past 7 days?	YES/NO	Vendor food Cafes/Takeaways Kiosks Restaurants/hotels	
s9q14	In the last 7 days how much did the household spend on Prepared foods?	#	In PHP	s9q14a=YES
s9q15	Please specify what other food items you have spent money on	Text		

s9q15other	In the last 7 days how much did the household spend on other food items?	#	In PHP	
s9q32a	Did you spend money (or goods) on Airtime, internet, other phone expenses in the past 30 Days?	YES/NO		
s9q32	In the last 30 days how much did the household spend on Airtime, internet, other phone expenses ?	#	In PHP	s9q32a=YES
s9q33a	Did you spend money (or goods) on Travel, transport, hotels (NOT including medical reasons) in the past 30 Days?	YES/NO	Petrol Road tolls Ferry Taxi Parking charges City bus Jeepney Tricycle or pedicab Bangkas Train/MRT Local flight Hotel stays	
s9q33	In the last 30 days how much did the household spend on Travel, transport, hotels (NOT including medical reasons) ?	#	In PHP	s9q33a=YES
s9q34a	Did you spend money (or goods) on Lottery tickets/gambling in the past 30 Days?	YES/NO		
s9q34	In the last 30 days how much did the household spend on Lottery tickets/gambling ?	#	In PHP	s9q34a=YES
s9q35a	Did you spend money (or goods) on Clothing and shoes in the past 30 Days?	YES/NO		

s9q35	In the last 30 days how much did the household spend on Clothing and shoes?	#	In PHP	s9q35a=YES
s9q36a	Did you spend money (or goods) on Recreation/entertainment in the past 30 Days?	YES/NO	Cinema tickets Videos Music/CDs Books/Magazines Stadium tickets Concert tickets Musical instruments	
s9q36	In the last 30 days how much did the household spend on Recreation/entertainment ?	#	In PHP	s9q36a=YES
s9q37a	Did you spend money (or goods) on Personal items in the past 30 Days?	YES/NO	Hairdressing salons, spas, massage Personal Hygiene: Aftershave, Body lotion, Toothpaste, razors, sanitary pads Cosmetics: lipstick, nail polish, eye-liner, etc.	

s9q37	In the last 30 days how much did the household spend on Personal items ?	#	In PHP	s9q37a=YES

Appendix H: Baseline Child Questionnaire

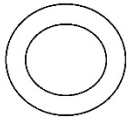

Dta file name: ~/Baseline Child Survey/Section_0.dta				
Section 0: Identifying Information				
Number	Question	Response	Notes	Relevance
<i>Prepopulated Information to be completed in advance of interview</i>				
s0q1	Field Officer please choose your name:	Select from preloaded Field Officer names		
s0q2	Enter Unique Household Identification Number	HID	From Section 0 of Household Survey	
[Display the name and address of respondent from previously entered UniqueID]				
s0q3	Is this the correct respondent?		This questions is used to confirm if the enumerator entered the correct UniqueID that is linked to their assigned household	
<p><i>I would like to begin by getting a sense of who is in the household. I consider someone a household member if they (1) sleep in the same housing unit and (2) have a common arrangement in the preparation and consumption of food. This includes individuals who are not currently in the household, but will return within 30 days of their initial departure, sleep in this housing unit, and have a common preparation/consumption of food.</i></p>				

<i>The following household roster section is to be filled in simultaneously by the Field Officer that is interviewing the Parent/Guardian-Respondent</i>				
s0q4	How many people live in this household, including you?		The following questions 5-9 will repeat this number of times	
<i>Repeat for every member of the household</i>				
s0q5	What is the full name of household member #NUMBER?			
s0q6	What is the age of NAME?	Integer		
s0q7	What is the gender of NAME?	Male/Female		
s0q8	What is the relation of NAME to the respondent?	Relation Code		
s0q9	Does NAME sleep in the same housing unit as other household members and have a common arrangement in the preparation of food?	Yes/No		
<i>Instructions to Interviewer: We want you to attempt to interview all of the children 10-17 in the household. Attempt to obtain consent to interview each child. Read the following statements to a parent/guardian of each child residing in the household and answer any questions the individual(s) may have. Do not begin to interview a child until all questions have been addressed, the parent/guardian has agreed to let the child/children participate in the study, and the child has agreed to be interviewed.</i>				
s0q10	May I talk with your children in private?	Yes/No	IF QUESTION "C" IS BETWEEN 10 AND 17 INCLUSIVE, ASK PARENT OR GUARDIAN OF EACH CHILD	

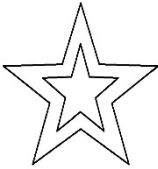

s0q11	If No, Why don't you want your children to take part in the survey?	Specify		
IF QUESTION G = NO FOR ANY ELIGIBLE CHILD IN THE HOUSEHOLD, END HOUSEHOLD AND CHILD SURVEYS				
s0q13	Name of the Child	CHOOSE THE NAME OF THE CHILD FROM THE ROSTER		
s0q14	Date of Interview	MM DD YYYY		
s0q15	Time of Start of Interview	HH MM		
s0q16	Take a GPS coordinate at the location of child interview.			
<p>As mentioned previously, IPA is conducting research about household economic activity and welfare. To conduct this research, we are not only interviewing the heads of the household but also children between the ages of 10 and 17.</p> <p>Thus, with your permission, we invite your child to participate in the part of this study that asks about the child's education, position in the household, allocation of time, perceptions, and a game where s/he is asked to trace basic shapes using a pencil and mirror. This interview will take about 20 minutes of your child's time. Your child's participation in this interview is completely voluntary. There is no penalty if you or your child refuse to participate.</p> <p>Before you and your child decide whether s/he will be part of this study, it's important for all of you to understand why we're doing the research and what's involved. We encourage you to discuss the study with your child. If you or your child has questions about the research, feel free to ask us. In about two years, we will come back for a follow-up interview to ask the same questions again, and you and/or your child can choose to decline to participate for the follow-up interview as well.</p> <p>You may find that the time and effort you take to be a participant in this study to be inconvenient. You may also find one or more of the questions that we ask to be upsetting. You or your child do not have to respond to any question that makes you feel uncomfortable, and you may end the interview at any time.</p> <p>There is no individual benefit expected from your child's participation in this study. You will not be paid nor will you have to pay for your participation in this study. This study will help researchers learn how to improve the livelihoods of you and your children.</p> <p>We will keep all the information your child shares with us confidential. The study team will make every effort to protect their privacy and maintain the confidentiality of all the information that they provide, though there is a risk that it may be lost. Only research staff will have access to the information gathered during our conversation and no personal identifiers will be connected to the data for analysis.</p>				

Dta file name: ~/Baseline Child Survey/Section_C.dta				
Consent Form				
Verbal Informed Consent to be Interviewed				
<i>Prepopulated Information to be completed in advance of interview</i>				
<p><i>Instructions to Interviewer: (1) This form is to be used to obtain assent from all children over age 10 and younger than age 18. (2) Parental consent must be obtained first; then each child must agree to be interviewed. (3) Read the following statements to the selected respondent and answer any questions the respondent may have. Do not begin the interview until a parent has given consent, all questions have been addressed, and the respondent has agreed to participate in the study. Do not interview the respondent if he/she does not give assent, even if the parent has given consent.</i></p>				
<p>Hello, my name is _____. I am from an organization called Innovations for Poverty Action (IPA). I am talking with parents and their children in the area to discover ways to improve the wellbeing of households like yours and children like you.</p> <p>To do this, I am inviting you and other children to take part in my research study. If you decide you want to be in this study, we will ask you to answer some questions about school, how you spend your time, your perceptions, and also ask you to play some games. This activity will take about 20 minutes.</p> <p>You do not have to participate in this study if you do not wish to. You can skip any question or stop at any time. If there is a question you do not want to answer or are afraid to answer, you can skip it.</p> <p>We will come back in about two years for a follow-up interview, and we will ask you again if you want to participate.</p> <p>Apart from your parent or guardian, other people will not know if you are in the study. The information I write down about you and other children will be kept safely locked up. When we tell other people or write an article about our research, we will not use your name.</p> <p>Your parent or guardian has said it is okay for you to be in the study. Now you get to choose if you would like to participate or not. You can choose to continue, or you can choose to stop at any other time. It is your decision. You can say no even if your mom or dad (or guardian) say yes. No one will be upset with you.</p> <p>Do you have any questions? You can also speak with your parent or guardian before you decide to continue with the interview.</p>

Section M: Mirror Tracing Game				
Number	Question	Response	Notes	Relevance
I would like to begin with a game. Please look at your hand in the mirror. While looking at your hand the whole time, try to trace along the picture you see. Take as much time as you like. Now, I'm going to give you a few more objects to trace.				
<i>Setup as follows: Image placed so that respondent only sees it in the mirror because the actual image is blocked by a piece of cardboard or something similar. Respondent attempts to trace each image. Start with simplest image, proceeding to more difficult ones until respondent decides to quit. Record number of images attempted and time spent on each one. (Images below are suggestions)</i>				
<i>Instructions to interviewer: Record whether attempted by the child, the number of errors in the drawing, and the time it takes for each image. End section when the child no longer wishes to attempt drawing.</i>				
c_images	Timestamp at beginning of images section	hh:mm:ss		
				
c_image1_0	Does the child want to attempt this image?	YES/NO		
c_image1start	Timestamp at beginning of image 1	hh:mm:ss		c_image1_0=YES

Dta file name: ~/Baseline Child Survey/Section_3.dta				
Section 3: Time Allocation				
Number	Question	Response	Notes	Relevance
<i>Activities</i>				
I want to begin by asking you a few questions about what activities you've participated in during the last 12 months and then collect more information on how you spend your time in the last 7 days.				
Babysitting / caring for other children in your household				
c_a1	Did you perform this activity in the last 12 months	YES/NO		
c_a2	How many days did you perform this activity in the last 7 days	#		
c_a3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Caring for elderly, sick, or disabled in your household				
c_b1	Did you perform this activity in the last 12 months	YES/NO		
c_b2	How many days did you perform this activity in the last 7 days	#		
c_b3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Cooking, cleaning, laundry, dishes, or shopping for your household				
c_c1	Did you perform this activity in the last 12 months	YES/NO		
c_c2	How many days did you perform this activity in the last 7 days	#		
c_c3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Collecting Wood, dung-cakes, or fodder for your household				
c_d1	Did you perform this activity in the last 12 months	YES/NO		

c_d2	How many days did you perform this activity in the last 7 days	#		
c_d3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Collecting water for your household				
c_e1	Did you perform this activity in the last 12 months	YES/NO		
c_e2	How many days did you perform this activity in the last 7 days	#		
c_e3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Minor Construction, repair work, tailoring, or handicrafts for your household's own use (not for sale)				
c_f1	Did you perform this activity in the last 12 months	YES/NO		
c_f2	How many days did you perform this activity in the last 7 days	#		
c_f3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Run or do any kind of business, big or small, by yourself or with one or more partners?				
c_g1	Did you perform this activity in the last 12 months	YES/NO		
c_g2	How many days did you perform this activity in the last 7 days	#		
c_g3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Do any work for pay, wage, salary, commission, or any kind of payment in kind (excluding domestic work)				
c_h1	Did you perform this activity in the last 12 months	YES/NO		
c_h2	How many days did you perform this activity in the last 7 days	#		
c_h2	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Do any work as a domestic worker for a wage, salary, or any payment in-kind				

c_i1	Did you perform this activity in the last 12 months	YES/NO		
c_i2	How many days did you perform this activity in the last 7 days	#		
c_i3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Help without pay in own household-operated business of any kind				
c_j1	Did you perform this activity in the last 12 months	YES/NO		
c_j2	How many days did you perform this activity in the last 7 days	#		
c_j3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Help or do any work on your own or your household's plot, farm, food garden, or help in growing farm produce or in looking after animals				
c_k1	Did you perform this activity in the last 12 months	YES/NO		
c_k2	How many days did you perform this activity in the last 7 days	#		
c_k3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Help or do any construction or major repair work on your own home, plot, or business, or those of other household's not mentioned above				
c_l1	Did you perform this activity in the last 12 months	YES/NO		
c_l2	How many days did you perform this activity in the last 7 days	#		
c_l3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Catch any fish, prawns, shells, wild animals, or other food for sale or for your household's own consumption				
c_m1	Did you perform this activity in the last 12 months	YES/NO		

c_m2	How many days did you perform this activity in the last 7 days	#		
c_m3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Produce any goods that you haven't already told us about that could be bought or sold in local markets (even if they are just for your household's own use)				
c_n1	Did you perform this activity in the last 12 months	YES/NO		
c_n2	How many days did you perform this activity in the last 7 days	#		
c_n3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
Do anything else that we haven't mentioned that contributed to your or your household's economic livelihood				
c_o1	Did you perform this activity in the last 12 months	YES/NO		
c_o2	How many days did you perform this activity in the last 7 days	#		
c_o3	How many hours did you spend doing this activity in the last 7 days? (in total)	#		
<i>Type of work</i>				
Now I am going to ask for a little more detail about about some of the economic activities we just mentioned				
c_s3q4	How would you describe the type of work where you spent the most time over the last 7 days?	Work Code		
c_s3q4_other	Specify other	Text		c_s3q4= Other
c_s3q5	How would you describe the type of work where you spend the most time over the last 12 monts?	Work Code		
c_s3q5_other	Specify other	Text		c_s3q5= Other
c_s3q6	How would you describe the type of work where you spent the second most time over the last 7 days?	Work Code		

c_s3q6_other	Specify other	Text		c_s3q6= Other
c_s3q7	How would you describe the type of work where you spend the second most time over the last 12 monts?	Work Code		
c_s3q7_other	Specify other	Text		c_s3q7= Other

Dta file name: ~/Baseline Child Survey/Section_4.dta				
Section 4: Work Characteristics				
Number	Question	Response	Notes	Relevance
Continue if c_a1=YES or c_b1=YES or c_c1=YES or c_d1=YES or c_e1=YES or c_f1=YES or c_g1=YES or c_h1=YES or c_i1=YES or c_j1=YES or c_k1=YES or c_l1=YES or c_m1=YES or c_n1=YES or c_o1=YES				
In my next set of questions, I am going to ask you about what you have experienced while working over the 12 months. I'm interested in both time you've spent in a family farm or business, in your own business, or in any work you've done for others. Over the last 12 months:				
c_s4q1	Was any of this work done after the sunset or before sunrise?	YES/NO		
c_s4q2	Do you ever have problems seeing while doing any of this work because of inadequate lighting?	YES/NO		
c_s4q3	Are there loud noises from machinery or people when you do this work?	YES/NO		
c_s4q4	Have you ever had to do this work in extreme temperatures or in a setting with poor ventilation?	YES/NO		
c_s4q5	Have you worked in an environment with lots of dust or debris?	YES/NO		
c_s4q6	Do you carry heavy loads while doing this work?	YES/NO		
c_s4q7	Do you operate any machinery or heavy equipment in this work?	YES/NO		
c_s4q8	Do you operate a motor vehicle in this work?	YES/NO		
c_s4q9	Are you ever exposed to an open flame or need to be concerned about being burned in this work?	YES/NO		
c_s4q10	Have you been injured while doing any of this work?	YES/NO		

c_s4q11	Do you handle any chemicals or toxic substances in this work including pesticides or fertilizers?	YES/NO		
c_s4q12	Do you wear protective gear such as gloves and masks when working with these chemicals?	YES/NO		s4q11=YES
c_s4q13	Have you noticed headaches, skin problem, breathing problems, stomach problems, or a general feeling of unwellness after doing this work?	YES/NO		
c_s4q14	Do you think any of the work you've done is hazardous or dangerous to you?	YES/NO		
c_s4q15	Who decides whether and how you work?	Work Decision Codes		
c_s4q16	How would you describe the worksite you've worked at most frequently over the last 12 months?	Worksite Codes		
c_s4q16_other	Specify why	Text		s4q16= Other or s4q16= No response
c_s4q16extra	Have you ever worked outside of your family's dwelling or family owned fields in the last 12 months?	YES/NO		s4q16= "Your family dwelling" or s4q16= "Family's Field"
c_s4q17	Are there workers who are not members of your family at any of the worksites you've worked in over the last 12 months?	YES/NO		
c_s4q17extra	Did you ever work in a setting where you weren't accompanied by a caregiver (such as a parent or grandparent)?	YES/NO		
c_s4q18	In your work, are you able to take days off if you are not feeling well?	YES/NO		

c_s4q19	In your work, are you able to refuse to do a task or job if it makes you uncomfortable or if you do not want to perform the task?	YES/NO		
c_s4q20	Are you able to leave this work if you wanted to?	YES/NO		
	Why are you unable to leave this job?			c_s4q20=NO
<i>Instructions to interviewer: Multiple Responses. Probe. Do not read possible answers.</i>				
c_s4q21	Working off debt that still owe	YES/NO		
c_s4q22	Parents would punish	YES/NO		
c_s4q23	Employer or other person would punish me or family	YES/NO		
c_s4q24	No other work available	YES/NO		
c_s4q25	Not enough money to leave	YES/NO		
c_s4q26	Wouldn't know where to go	YES/NO		
c_s4q27	Other (specify)	Text		
c_s4q28	How many hours do you work in a typical week over the last 12 months?	#		
Have you received any of the following in exchange for your work?				
s4q29	Cash	YES/NO		
s4q30	New Skill	YES/NO		
s4q31	Education	YES/NO		
s4q32	Shelter, food, clothing	YES/NO		
s4q33	Medical support	YES/NO		
s4q34	Nothing	YES/NO		
s4q35	Other (specify)	Text		
s4q36	Do you or your employer give part or all of your earnings/benefits to your parents/guardians or other relatives?	Earnings Recipient Codes		

s4q39	How much do you earn in a typical week (in cash or in kind and including the amount given to your parents)?	#	In PHP	
-------	---	---	--------	--

Dta file name: ~/Baseline Child Survey/Section_5.dta

Section 5: Life Satisfaction

Number	Question	Response	Notes	Relevance
c_s5q1	Please imagine a ladder with steps numbered from 0 at the bottom to 10 at the top (show picture). Suppose the ladder represents the best possible life for you (10) and the bottom represents the worst possible life for you (0). On which step of the ladder do you feel you stand at the present time?	#		
	10		Best possible life	
	0		Worst possible life	

I would like to get a sense of your thoughts about your mother's parenting style over the last 12 months. I will read to you a series of statements reflecting a parenting approach, and I would like to know whether the statement sounds a lot like your mother, moderately like your mother, moderately unlike your mother, or very unlike your mother.				
<i>Instructions for interviewer: If, for example, the mother is deceased, ask the child if someone else in the household serves the role of mother. If yes, the child should answer the questions about that individual.</i>				
c_s5q2	Speaks to me in a warm and friendly voice.	PBI Codes		
c_s5q3	Does not help me as much as I need.	PBI Codes		
c_s5q4	Lets me do things I like doing.	PBI Codes		
c_s5q5	Seems emotionally cold to me.	PBI Codes		
c_s5q6	Appears to understand my problems and worries.	PBI Codes		
c_s5q7	Is affectionate to me.	PBI Codes		
c_s5q8	Likes me to make my own decisions.	PBI Codes		
c_s5q9	Doesn't want me to grow up.	PBI Codes		
c_s5q10	Tries to control everything I do.	PBI Codes		
c_s5q11	Invades my privacy	PBI Codes		
c_s5q12	Enjoys talking things over with me	PBI Codes		
c_s5q13	Frequently smiles at me	PBI Codes		
c_s5q14	Tends to baby me	PBI Codes		
c_s5q15	Does not seem to understand what I want or need	PBI Codes		
c_s5q16	Let me decide things for myself	PBI Codes		
c_s5q17	Makes me feel I'm not wanted	PBI Codes		
c_s5q18	Makes me feel better when I'm upset	PBI Codes		
c_s5q19	Does not talk with me very much	PBI Codes		
c_s5q20	Tries to make me feel dependent on her	PBI Codes		
c_s5q21	Feels I cannot look after myself unless she is around	PBI Codes		
c_s5q22	Gives me as much freedom as I want	PBI Codes		
c_s5q23	Lets me go out as often as I want	PBI Codes		
c_s5q24	Is overprotective of me	PBI Codes		
c_s5q25	Does not praise me	PBI Codes		
c_s5q26	Lets me dress in any way I please.	PBI Codes		

Now I am going to ask you the same set of questions about your father's parenting style over the last 12 months.				
<i>Instructions for interviewer: If, for example, the father is deceased, ask the child if someone else in the household serves the role of father. If yes, the child should answer the questions about that individual.</i>				
c_s5q27	Speaks to me in a warm and friendly voice.	PBI Codes		
c_s5q28	Does not help me as much as I need.	PBI Codes		
c_s5q29	Lets me do things I like doing.	PBI Codes		
c_s5q30	Seems emotionally cold to me.	PBI Codes		
c_s5q31	Appears to understand my problems and worries.	PBI Codes		
c_s5q32	Is affectionate to me.	PBI Codes		
c_s5q33	Likes me to make my own decisions.	PBI Codes		
c_s5q34	Doesn't want me to grow up.	PBI Codes		
c_s5q35	Tries to control everything I do.	PBI Codes		
c_s5q36	Invades my privacy	PBI Codes		
c_s5q37	Enjoys talking things over with me	PBI Codes		
c_s5q38	Frequently smiles at me	PBI Codes		
c_s5q39	Tends to baby me	PBI Codes		
c_s5q40	Does not seem to understand what I want or need	PBI Codes		
c_s5q41	Let me decide things for myself	PBI Codes		
c_s5q42	Makes me feel I'm not wanted	PBI Codes		
c_s5q43	Makes me feel better when I'm upset	PBI Codes		
c_s5q44	Does not talk with me very much	PBI Codes		
c_s5q45	Tries to make me feel dependent on her	PBI Codes		
c_s5q46	Feels I cannot look after myself unless she is around	PBI Codes		
c_s5q47	Gives me as much freedom as I want	PBI Codes		
c_s5q48	Lets me go out as often as I want	PBI Codes		
c_s5q49	Is overprotective of me	PBI Codes		
c_s5q50	Does not praise me	PBI Codes		
c_s5q51	Lets me dress in any way I please.	PBI Codes

Answer Codes - Baseline Child Survey			
Education Codes		Alert Codes	
0	Pre-Kinder	1	Subject shuts down and is difficult to engage in questions and tasks
1	Kinder	2	Subject repeatedly withdraws and needs encouragement to stay engaged
3	1st Grade	3	Subject generally interacts but sometimes turns away and takes a break from interacting
4	2nd Grade	4	Subject participates in survey and seems relaxed
5	3rd Grade	Shy Codes	
6	4th Grade	1	Subject is very shy and hesitant to speak, speaks quietly, or does not make eye contact with interviewer
7	5th Grade	2	Subject is initially shy but gains confidence as interview progresses
9	6th Grade	3	Subject answers most questions with confidence, occasionally hesitant
10	7th Grade	4	Subject is confident throughout interview, happily responding with a loud voice
11	8th Grade	Present Codes	
12	9th Grade	1	Yes, the whole interview
13	10th Grade	2	Yes, part of the interview
14	11th Grade	3	No, the interview was private
15	12th Grade	Listener Codes	
16	High School Graduate	1	Yes, the whole interview
17	1st Year Vocational training or associates degree	2	Yes, part of the interview

18	2nd Year Vocational training or associates degree	3	No, not present
19	Vocational training or associates degree graduate	Attempt Codes	
20	1st year of college	1	Yes, attempted and finished
21	2nd year of college	2	Yes, attempted and did not finish
22	3rd year of college	3	No, did not attempt
23	4th year of college or higher	Farming Activity Codes	
24	College graduate	1	Animal Husbandry
25	Education beyond college	2	Flour mill
96	Other: Specify	3	Fruit Cultivation
-999	No Response	4	Goat Work
School Type Codes		5	Grain Cultivation
1	Private - Catholic	6	Meat shop
2	Private - Non-Catholic	7	Milking Animal and selling milk
3	Public	8	Pig Work
4	Technical or vocational school	9	Poultry work
5	ALS	10	Slaughterhouse Work
6	Other	11	Vegetable Cultivation
-999	No Response	Non-Farming Activity Codes	
1	Placeholder	1	Alcohol maker
Family Member Codes		2	Automobile workshop or garage work
1	Mother	3	Barber Shop Owner
2	Father	4	Bricks and Cement Industry
3	Both Father and Mother	5	Cobbler (shoe Repairing)
4	No Parent - sibling	6	Cycle & bike Repair
5	No Parent or sibling - other relative	7	Driving
6	No relative	8	Electrician
Work Codes		9	E-mitra & photocopy shop

1	Sugarcane Farming	10	Glass or Ceramics
2	Banana Farming	11	Hardware shop
3	Coconut Farming	12	Head Carpenter
4	Palm Farming	13	Iron work & Welding work
5	Rubber Farming	14	Jewellery shop owner
6	Tobacco Farming	15	Jewellery shop worker
7	Other Farming	16	Labor in carpentry work
8	Livestock And Dairy Farmers	17	Labour & construction
9	Poultry Farmers	18	Laundry work
10	Aqua-Farm Cultivators	19	Local musical instrument
11	Inland And Coastal Waters Fishermen	20	Looking for Recyclable Goods and Reselling
12	Deep-Sea Fishermen	21	Marrige work & pandit
13	Mining And Quarrying Including Gold Extraction	22	Nursery
14	Manufacturing Pyrotechnics	23	Oil and wheat shop
15	Construction	24	Painter
16	Domestic Work	25	Plumber
17	Street Work Including Scavenging And Begging	26	Portering
18	Scavenging In Dumpsites	27	Processing or processing granite
19	Commercial Sexual Activity	28	Ragpicking
20	Sports Associate Professionals	29	Selling small items on the street
21	Artistic, Entertainment Associate Professionals (Entertainers)	30	Shop keeper (General store)
22	Plumbers	31	Stationary shop
23	Brick making	32	Stone breaking or stone crushing
24	Extraction of lard/oil	33	Tailor work
25	Vulcanizing (rubber workers)	34	Tea stall
26	Grain mill workers	35	Working in a barber shop

27	Heavy equipment operator (ie., bulldozer operator)	36	Working in dhaba (road side eatery), restaurant, hotel, motel
28	Guard	Domestic Activity Codes	
29	Firefighter	1	Caring for others
30	Hairdresser/Barber	2	Cleaning (Including any cleaning related work, like sweeping floor, washing dishes etc)
31	Consumer store operator	3	Collection Activities such as wood, water, dung, fodder (including travel and wait time)
32	Blacksmiths, Tool-Makers And Related Trades Workers	4	Cooking (Includes making tea and snacks for the hh)
35	Cashiers, Tellers And Related Clerks	5	Domestic worker or servant
36	Charcoal Makers And Related Workers	6	Sweeping
37	Cleaners, Launderers And Related Workers	Interview Place Codes	
38	Loggers	1	Home
39	Food Processing And Related trades Workers	2	School
40	Garbage Collectors And Related Laborers	3	Other
41	General Managers/Managing-Proprietors	Relation Codes	
42	Handicraft Workers In Wood, Textile, Leather, Chemicals And Related Workers	1	Self
43	Hotel Housekeeping and Restaurant Services Workers	2	Spouse
44	Leather And Shoemaking Trades Workers	3	Own Child
45	Machinery Mechanics, Fitters And Related Trades Workers	4	Step-Child

46	Market Stall Vendors, Street Vendors And Related Workers	5	Parent
47	Messengers, Porters, Doorkeepers And Related Workers	6	Sibling
48	Metal Molders, Welders, Sheet-Metal Workers, Structural-Metal Preparers And Related Trades Workers	7	Grandparent
49	Motor Vehicle Drivers	8	Grandchild
50	Painters And Related Trades Workers	9	Cousin
51	Printing Binding And Related Trades Workers	10	Nephew/Niece
52	Shoe Cleaning And Other Street Services Elementary Occupations	11	Son/Daughter-In-Law
53	Shotfirers, Stone Cutters And Carvers	12	Brother/Sister-In-Law
54	Specialized Managers	13	Parent-In-Law
55	Textile, Garment And Related Trades Workers	15	Aunt/Uncle
56	Wood Treaters, Cabinet Makers And Related Trades Workers	16	Other Relative
79	Rice Farming	17	Domestic Servant
98	Only 1 Type of Work	18	Employee
99	Other: Specify	19	Coworker
-999	No Response	20	Friend
Activity Codes		21	Boarder
1	Bathing/freshening up	22	Other Unrelated
2	Domestic Household Activity	-999	No Response
3	Eating/drinking	Recipient Codes	
4	Farm related Work	1	Yes, Employer gives all income
5	Non-Farm related Work	2	Yes, I give all

6	Leisure: play, seeing friends, watching tv, etc.	3	Yes, Employer gives part of my income
7	Shopping	4	Yes, I give part myself
8	Sleeping	5	No, none given to parents or relatives
9	Studying at home/Tuitions at home	-888	Don't Know
10	Travelling to and fro from school	-999	No response
11	Travelling to and fro from work	PBI Codes	
12	Tuitions outside home	1	Very like
96	Other: Specify	2	Moderately Like
Work Decision Codes		3	Moderately Unlike
1	Myself	4	Very unlike
2	My parents / guardians of their own accord	-999	No Response
3	My parents / guardians, forced by another person	Attention Codes	
4	My parents' employer or landowner	1	Subject spends most of interview time inattentive, off-task
5	The person my parents borrowed money from	2	Subject's attention frequently drifts
6	A previous employer sent me here without my consent	3	Subject's attention occassionally drifts
7	My current employer	4	Subject plays close attention the whole time
8	Other (Specify)	Care Codes	
-999	No Response	1	Subject is unfocused, haphazard
Worksite Codes		2	Subject is careless at times
1	Your family dwelling	3	Subject generally thoughtful but loses interest over time

2	Family's Field	4	Subject takes the time to think and seems to make thoughtful choices
2a	Non-Family's Field		
2b	Fishing area		
3	Employer's House		
4	Formal Office		
5	Shed		
6	Factory		
7	Shop, Market, Kiosk		
8	Street		
9	Dumpsite		
10	Other (Specify)		
-999	No Response		

Appendix I: Midline Household Questionnaire

Consent to Interview				
Number	Question	Response	Notes	Relevance
CONDUCT THIS INTERVIEW IN PRIVATE. READ THE FOLLOWING STATEMENTS TO THE RESPONDENT AND ANSWER ANY QUESTIONS THE INDIVIDUAL MAY HAVE. IF THE INDIVIDUAL ASKS ABOUT THE SPONSORSHIP OF THE STUDY AND HOW THE FINDINGS WILL BE USED, READ THE EXPLANATION THAT HAS BEEN PROVIDED TO YOU. DO NOT BEGIN THE INTERVIEW UNTIL ALL QUESTIONS HAVE BEEN ADDRESSED AND THE INDIVIDUAL HAS AGREED TO PARTICIPATE IN THE STUDY.				
<p>Hello, my name is [ENUMERATOR NAME]. I am from Innovations for Poverty Action (IPA), a non-profit research organization dedicated to finding innovative solutions to development issues in various countries. Our organization visited you previously roughly one year ago. We would like to conduct a follow-up survey with you today.</p> <p>I am visiting you today because we are conducting a study about household economic activity and welfare. The purpose of this survey is to better understand characteristics of households in Luzon, and to learn about the economic activity of household members. We hope our findings will help inform organizations working to support households like yours and to improve livelihoods throughout the Philippines. We would like to invite you to participate in this survey, which will ask questions regarding the composition of your household as well as the education, economic activity, income, and consumption of you and your household members. The survey will require approximately 60 minutes of your time. For participating in this survey, you will receive a small token gift. I or another member of our survey team will return in 12 months for another follow-up survey, but you can choose not to participate in the follow-up interview if you wish.</p> <p>This research will help us better understand the needs of the community to improve future interventions directed toward households in this region. You may experience distress over the nature of some of the questions, especially those questions related to children in this household. Please know that all of your answers will be kept confidential, and no names will be stored or published with survey responses. Only research staff will have access to any data that could potentially identify you.</p> <p>Participation in this study and in this interview is completely voluntary. You are free to decline to participate, to end participation at any time for any reason, or to refuse to answer any individual questions. There is no penalty for refusing to participate or to not answer any individual question. If you have any questions or concerns please contact me at ### or IPA Country Director at ###.</p>				
m_scq1	Would you be willing to participate in the study?	YES/NO		
m_scq2	Why don't you want to take part in the survey?	Text		m_scq1=NO

m_scq3	May we begin?	YES/NO		m_scq1=YES
m_scq4	Why can't we begin?	Text		m_scq3=NO

Dta file name: ~/Midline Household Survey/Section_1.dta				
Section 1: Household Roster				
Number	Question	Response	Notes	Relevance
<p>I would like to begin by getting a sense of who is in the household. I consider someone a household member if they (1) sleep in the same housing unit and (2) have a common arrangement in the preparation and consumption of food. This includes individuals who are not currently in the household, but will return within 30 days of their initial departure, sleep in this housing unit, and have a common arrangement in the preparation/consumption of food.</p> <p>We obtained a list of members of this household when we interviewed you approximately 1 year ago. We would first like to understand the whereabouts of these individuals, and then move on to any new household members.</p> <p>First we will ask about the list of household members reported in the previous survey.</p>				
Repeat over baseline members				
m_slq2	Does [NAME] sleep in the same housing unit as other household members and have a common arrangement in the preparation of food?	YES/NO		
m_slq3	Did [NAME] sleep in the house yesterday?	YES/NO		m_slq2=YES
m_slq4	Will [NAME] return to the house within 30 days from when he or she last left?	YES/NO		m_slq2=NO
m_slq5	The following are names currently listed as household members: [LIST]. Is there anyone else (including yourself) who sleeps in the same housing unit as other household members and has a common arrangement in the preparation of food?	YES/NO		
Repeat over new members (m_slq5=YES)				

m_slq6	Did this person sleep in the house yesterday?	YES/NO		
m_slq7	Will this person return to the house within 30 days from when he or she last left?	YES/NO		m_slq6!=YES
m_slq8	What is this person's name?	Text		m_slq6=YES or m_slq7=YES
m_slq5_repeat	The following are names currently listed as household members: [LIST]. Is there anyone else (including yourself) who sleeps in the same housing unit as other household members and has a common arrangement in the preparation of food?	YES/NO		
I would next like to ask some questions about members that have left the household. Our organization may wish to interview these individuals during a follow-up survey (with your consent if this member is a child). The following questions will help us locate these individuals during our follow-up survey.				
Repeat over baseline members that have left.				
m_slq9	Why does [NAME] no longer live in the household?	No-Longer Codes		
m_slq10	WRITE IN OTHER REASON	Text		m_slq9=Other
m_slq11	Is the move temporary or permanent?	Moved Codes 2		m_slq9="Moved for work" or m_slq9="Moved for school"
m_slq12	How many months until until [NAME] will return to being a household member?	#	Have respondent estimate if necessary	m_slq11=Temporary
m_slq13	What is [NAME]'s current region?	Regions Codes 4		not (m_slq9=Death)
m_country2	Which country?	Text		m_slq13=Abroad

m_slq14	What is [NAME]'s current province?	Province Codes 2		not (m_slq9=Death) and m_slq13!=Abroad
m_slq14_other	WRITE IN OTHER PROVINCE:	Text		m_slq14=Other
m_slq15	What is [NAME]'s current municipality?	Municipality Codes 2		not (m_slq9=Death) and m_slq13!=Abroad
m_slq16	WRITE IN OTHER MUNICIPALITY	Text		m_slq15=Other
m_slq17	What is [NAME]'s current barangay?	Barangay Codes 2		not (m_slq9=Death) and m_slq13!=Abroad
m_slq18	WRITE IN OTHER BARANGAY	Text		m_slq17=Other
m_slq19	What is [NAME]'s current street name?	Text		not (m_slq9=Death) and m_slq13!=Abroad
m_slq20	What is [NAME]'s current purok/ zone/ sitio/ phase?	Text		not (m_slq9=Death) and m_slq13!=Abroad
m_slq21	What is [NAME]'s current postal code?	Text		not (m_slq9=Death) and m_slq13!=Abroad
m_slq22	What is [NAME]'s current mobile number?	Text		not (m_slq9=YES)
m_slq23	Is there another phone number that would help us contact [NAME]?	YES/NO		not (m_slq9=YES)
m_slq24	What is this phone number?	Text		m_slq23=YES
m_slq25	Whose phone number is this?	Text	Write in a name.	m_slq23=YES

m_slq26	Are there any other relevant details helpful to locate [NAME] for the endline survey?	Text	Optional. Write in anything useful.	not (m_slq9=YES)
m_non_dead	Number of non-dead migrants.	calculate		
Next I will ask about all the members of your household.				
Repeat over all household members				
m_slq27	What is the gender of [NAME]?	Female/Male		
m_slq28	What is [NAME]'s year of birth?	#	Estimate if respondent does not know.	
m_slq29	Was [NAME] born in this community?	YES/NO		
m_slq30	What is the relation of [NAME] to the respondent?	Relation Codes		
m_slq31	Is [NAME]'s guardian a Member of Household?	YES/NO	Person taking care of the child.	m_slq28<=2007 and m_slq28>=2000
m_slq32	Who is [NAME]'s guardian?	HH Roster	Person taking care of the child.	m_slq31=YES
m_slq33	What is name of the guardian?	Text		m_slq31=NO
m_slq34	What is [NAME]'s marital status?	Marriage Codes		
m_slq34_other	SPECIFY OTHER MARITAL STATUS	Text		m_slq34=Other
m_slq35	Was [NAME] present in the house at some point on the day of interview?	YES/NO		
m_slq36	What is [NAME]'s highest educational level completed?	Education Codes		m_slq28<=2012
m_slq36_other	SPECIFY OTHER EDUCATION LEVEL:	Text		m_slq36=Other

m_slq37	Was this grade completed through ALS (Alternative Learning System), PEPT (Philippine Education Placement Test), home schooling, or another non-traditional mode of education?	YES/NO		m_slq28<=2012 and (m_slq36=23 or m_slq36=24 or m_slq36=1 or m_slq36=2 or m_slq36=3 or m_slq36=4 or m_slq36=5 or m_slq36=6 or m_slq36=7 or m_slq36=8 or m_slq36=9 or m_slq36=10 or m_slq36=11 or m_slq36=12 or m_slq36=13 or m_slq36=25 or m_slq36=26 or m_slq36=27 or m_slq36=28 or m_slq36=96 or m_slq36=-998 or m_slq36=-999)
Education Questions. Continue if m_slq28<=2014 and m_slq28>=1992.				
m_slq38	Is [NAME] currently attending school/college? This could be in a traditional classroom-based school or non-traditional mode such as ALS.	YES/NO	If [NAME] is on summer break, say they are currently attending school/college.	m_slq28<=2012

m_slq39	At what grade is [NAME] currently studying?	Education Codes	If [NAME] is on summer break, say they are studying at the grade just completed.	m_slq38=YES
m_slq39_other	SPECIFY OTHER EDUCATION LEVEL:	Text		m_slq39=Other
m_slq40	In the past 7 days, how many days did [NAME] go to school?	#	It is okay to write 0 if school is out for summer vacation. Estimate if respondent does not know.	m_slq38=YES
m_slq41	In the past 7 days, how many days was [NAME]'s school open for teaching?	#	It is okay to write 0 if school is out for summer vacation. Estimate if respondent does not know.	m_slq38=YES
Time Allocation Questions. Continue if m_slq28<=2011				
m_slq42	Did [NAME] spend any time in the last 12 months working or helping on farm land owned, rented or leased by the household?	YES/NO

Dta file name: ~/Midline Household Survey/Section_2.dta				
Section 2: Out Migrants				
Number	Question	Response	Notes	Relevance
I would like to begin by getting a sense of whether anyone has lived outside the household.				
m_s2q1	Are there any individuals, not listed in the household roster, who have been household members at some point over the last 24 months?	YES/NO		non_dead=0
Continue if m_s2q1=YES or m_non_dead>0				
m_s2q2	The following are names currently listed as migrants: [MIGRANT ROSTER]. Are there any other individuals who were household members in the past 24 months, but are no longer household members?	YES/NO	hh member is someone who sleeps in the hh and has a common arrangement in the preparation and consumption of food.	
Repeat over new migrants (m_s2q2=YES)				
m_s2q3	What is this person's name?	Text		

m_s2q2_repeat	The following are names currently listed as household members: [HH ROSTER]. Are there any other individuals who were household members in the past 24 months, but are no longer household members?	YES/NO	hh member is someone who sleeps in the hh and has a common arrangement in the preparation and consumption of food.	
Repear over all migrants				
Next we will ask questions about: [NAME]				
m_s2q4	What is [NAME]'s relation to respondent?	Relation Codes		
m_s2q5	What is [NAME]'s year of birth?	#		
m_s2q6	Is [NAME] male or female ?	Female/Male		
m_s2q7	What is [NAME]'s marital status?	Marriage Codes		
m_s2q7_other	SPECIFY OTHER MARITAL STATUS	Text		m_s2q7=Other
m_s2q8	Was [NAME] born in this community?	YES/NO		
m_s2q9	What is [NAME]'s highest educational level completed?	Education Codes		m_s2q5<=2012
m_s2q9_other	SPECIFY OTHER EDUCATION LEVEL:	Text		m_s2q9=Other
m_s2q10	What was [NAME]'s principal usual activity when they were last living in this household?	Activity Codes (short)		
m_s2q10_two	What type of sub-activity?	Activity Codes		
m_s2q10_other	SPECIFY OTHER ACTIVITY	Text		m_s2q10_two=Other
m_s2q11	Where does [NAME] currently live?	Location Codes		

m_s2q12	Is [NAME] an Overseas Filipino Worker (OFW)?	YES/NO		m_s2q11=Abroad
m_s2q13	What is [NAME]'s principal activity in the location where [NAME] currently lives?	Activity Codes (short)		
m_s2q13_two	What type of sub-activity?	Activity Codes		
m_s2q13_other	SPECIFY OTHER ACTIVITY	Text		m_s2q13_two=Other
m_s2q14	Has anyone in this household sent money to [NAME] or on his/her behalf to his/her current location?	YES/NO		
m_s2q15	Has anyone in this household sent in-kind transfers, for example, goods or services rather than money, to [NAME] or on his/her behalf to his/ her current location?	YES/NO		
m_s2q16	Has anyone in this household received money from [NAME] or on his/ her behalf from his/ her current location?	YES/NO		
m_s2q17	Has anyone in this household received in-kind transfers, for example, goods or services rather than money, from [NAME] or on his/ her behalf from his/ her current location?	YES/NO		
m_s2q18	Would [NAME] be free to leave their current location if they desired?	YES/NO		

Dta file name: ~/Midline Household Survey/Section_4.dta				
Section 4: Background and Informant Information				
Number	Question	Response	Notes	Relevance
Next we would like to ask you about events that this household experienced in the last 12 months.				
m_s4q1	What type of employment is most important to this household's economic well-being?	Economy Codes		
m_s4q1_other	SPECIFY OTHER EMPLOYMENT:	Text		m_s4q1=Other
m_s4q2	Does any member of the household have a bank account?	YES/NO	This includes cash cards, or withdraw-only accounts.	
m_s4q3	In the past 12 months, did you or other members of your household participate in any gambling, raffles, or sweepstakes?	YES/NO		
m_s4q4	Have any household members died during the last 12 months?	YES/NO		
m_s4q5	Have any household members experienced grave illness requiring hospitalization or continuous medical treatment during the last 12 months?	YES/NO		
m_s4q6	Have any household members experienced a loss of employment or business failure in the past 12 months?	YES/NO		
m_s4q7	Has the household experienced any loss due to fire, earthquake, typhoon, flood, or other disaster during the last 12 months?	YES/NO	This includes death of livestock to disease, for example.	

m_s4q8	Has the household experienced harvest failure during the last 12 months?	YES/NO	This only includes crops the household owns.	
m_s4q9	Has the household experienced displacement due to natural or manmade disaster, armed conflict, infrastructure development project, or for other reasons during the last 12 months?	YES/NO		

Dta file name: ~/Midline Household Survey/Section_5.dta

Section 5: Government Transfers

Number	Question	Response	Notes	Relevance
Next I would like to ask some questions related to transfers this household receives from the government or NGOs.				
m_s5q2	In the past 12 months, did you or any member of your household receive benefits from the 4Ps (Pantawid Pamilyang Pilipino Program)?	YES/NO		
m_s5q3	Were these benefits in cash, in-kind, or both?	Payment Type Codes		m_s5q2=YES
m_s5q4	How much cash did you receive?	#	In last 12 months in pesos.	m_s5q3=Cash or m_s5q3=Both
m_s5q5	What was the value of the in-kind transfer?	#	In last 12 months in pesos. "In-kind" transfers in this question means "goods".	m_s5q3=In kind or m_s5q3=Both
m_s5q6	In the past 12 months, did you or any member of your household receive benefits from the DSWD's (Department of Social Welfare and Development) SLP (Sustainable Livelihoods Program)?	YES/NO		
m_s5q7	Was the assistance with employment or micro-enterprise?	Assistance Codes		m_s5q6=YES
m_s5q8	Were these benefits in cash, in-kind, or both?	Payment Type Codes		m_s5q7=Micro-Enterprise

m_s5q9	How much cash did you receive?	#	In last 12 months in pesos.	m_s5q8=Cash or m_s5q8=Both
m_s5q10	What was the value of the in-kind transfer?	#	In last 12 months in pesos.	m_s5q8=In kind or m_s5q8=Both
m_s5q11	In the past 12 months, did you or any member of your household receive SSS (Social Security System) benefits?	YES/NO		
m_s5q12	How much money in pesos did your household receive in the past 12 months from SSS?	#		m_s5q11=YES
m_s5q13	How much did your household receive in benefits each month?	#	In last 12 months in pesos.	m_s5q11=YES
m_s5q14	In the past 12 months, did you or any member of your household receive KASAMA (Kabuhayan para sa Magulang ng Batang Manggagawa), also known as DILEEP (DOLE Integrated Livelihood and Emergency Program) benefits?	YES/NO		
m_s5q15	What was the value of the in-kind transfer you received?	#	In last 12 months in pesos.	m_s5q14=YES
m_s5q16	In the past 12 months, did you or any member of your household receive benefits from the PCSO (Philippine Charity Sweepstakes Office) to help cover medical bills?	YES/NO		
m_s5q17	How much did your household receive in benefits in the last 12 months?	#	In last 12 months in pesos.	m_s5q16=YES

m_s5q18	Other than 4P's, SLP, SSS, KASAMA, DILEEP, and PCSO, did you or any member of your household receive any other money from the government or NGOs in the past 12 months? (for example: GSIS or scholarships)	YES/NO		
m_s5q20	What other transfers did your household receive in the past 12 months?	Transfer Codes	Money transfers in pesos. Select all that apply.	m_s5q18=YES
m_s5q20_other	SPECIFY OTHER TRANSFER	Text		m_s5q20=Other
m_s5q19	How much did your household receive in total from the government or NGOs in the past 12 months (including 4Ps, SLP, SSS, KASAMA, DILEEP, and PCSO)?	#	In last 12 months in pesos.	
m_s5q21	Has any household member participated in any training programs designed to teach you how to start a new business, how to manage an existing business, or jobskills?	YES/NO		

Dta file name: ~/Midline Household Survey/Section_6.dta				
Section 6: Land and Agriculture				
Number	Question	Response	Notes	Relevance
Now I'd like to ask you about any land acquisitions and agricultural activities you've conducted in the past 12 months.				
m_s6q1	Have you acquired any land in the last 12 months?	YES/NO		
m_s6q2	Did you purchase any of this land that you acquired in the last 12 months?	YES/NO		m_s6q1=YES
m_s6q3	How much did you spend in total purchasing land in the last 12 months?	#	In last 12 months in pesos.	m_s6q2=YES
m_s6q4	What was the principal source of funds for these purchases in the last 12 months?	Capital Codes		m_s6q2=YES
m_s6q4_other	SPECIFY OTHER SOURCE OF FUNDS	Text		m_s6q4=Other
m_s6q5	Did you receive any land as a gift, inheritance, or government transfer in the last 12 months?	YES/NO		m_s6q1=YES
m_s6q6	What was the source of this land?	In-Kind Codes		m_s6q5=YES
m_s6q6_other	SPECIFY OTHER SOURCE OF LAND	Text		m_s6q6=Other
m_s6q7	If you were to purchase this land you received on the open market, how much do you think you would have to spend?	#	In PHP	m_s6q5=YES

m_s6q8	<p>Did you cultivate crops in the last 12 months?</p> <p>Answer YES if any household member cultivates any crops for personal consumption or sale. This includes both small garden-plots and large farm-plots. It includes cultivation on own land, rented in land, or sharecropped in land. It should not include casual farm labor performed on land for some other household or business.</p>	YES/NO		
<p>During the baseline survey one year ago, the respondent [BASELINE RESPONDENT] told our surveyor that your household spent roughly [FARM EXPENSES] pesos over the prior 12 months on inputs so that the household could cultivate crops.</p> <p>These inputs included: seeds, fertilizer, herbicides, pesticides, rented equipment, water, labor, and other expenses.</p>				
m_farm_exp_ques	In the 12 months since the baseline survey, has your spending on these inputs increased, decreased, or stayed the same?	Increased Codes		m_s6q8=YES
m_s6q9	How much did you spend in total in the last 12 months to be able to cultivate these crops including seed, fertilizer, pesticides, or other inputs that go into cultivation?	#	In last 12 months in pesos.	m_s6q8=YES
m_s6q10	What was the principal source of funds used to cultivate these crops?	Capital Codes		m_s6q8=YES

m_s6q11	Did you receive any in-kind inputs for free that you used to cultivate crops in the last 12 months?	YES/NO	Examples of inputs used for cultivation include seeds, fertilizers, tools, and pesticides	m_s6q8=YES
m_s6q12	How much in total would it have cost you to purchase those inputs with your own money?	#	In PHP	m_s6q11=YES
m_s6q13	What was the principal source of these in-kind inputs?	In-Kind Codes		m_s6q11=YES
m_s6q13_other	SPECIFY OTHER SOURCE OF IN-KIND INPUTS:	Text		m_s6q13=YES

Dta file name: ~/Midline Household Survey/Section_7.dta				
Section 7: Livestock				
Number	Question	Response	Notes	Relevance
I will now ask you some questions about your livestock.				
Large Livestock				
m_s7q1	In the last 12 months, did your household acquire any new large livestock, like carabao, cows, bulls, calves, horses, etc.?	YES/NO		
m_s7q2	Did your household purchase any of these new livestock yourselves?	YES/NO		m_s7q1=YES
m_s7q3	If so, what was your main source of money?	Capital Codes		m_s7q2=YES
m_s7q3_other	SPECIFY OTHER SOURCE OF MONEY:	Text		m_s7q3=Other
m_s7q4	How much did you spend?	#	In last 12 months in pesos.	m_s7q2=YES
m_s7q5	Did your household receive any of these new livestock without purchasing them yourselves?	YES/NO		m_s7q1=YES
m_s7q6	What was the main source of the resources used to acquire these livestock?	Livestock Capital Codes		m_s7q5=YES
m_s7q6_other	SPECIFY OTHER RESOURCES	Text		m_s7q6=Other
m_s7q7	If you were to buy these livestock with your own resources, how much would they cost?	#	In PHP	m_s7q5=YES
Small Livestock				
m_s7q8	In the last 12 months, did your household acquire any new small livestock (goats, sheep, pigs, etc.)?	YES/NO		

m_s7q9	Did your household purchase any of these new livestock yourselves?	YES/NO		m_s7q8=YES
m_s7q10	If so, what was your main source of money?	Capital Codes		m_s7q9=YES
m_s7q10_other	SPECIFY OTHER SOURCE OF MONEY:	Text		m_s7q10=Other
m_s7q11	How much did you spend?	#	In last 12 months in pesos.	m_s7q9=YES
m_s7q12	Did your household receive any of these new livestock without purchasing them yourselves?	YES/NO		m_s7q8=YES
m_s7q13	What was the main source of the resources used to acquire these livestock?	Livestock Capital Codes		m_s7q12=YES
m_s7q13_other	SPECIFY OTHER SOURCE OF RESOURCES:	Text		m_s7q13=Other
m_s7q14	If you were to buy these livestock with your own resources, how much would they cost?	#	In PHP	m_s7q12=YES
Birds				
m_s7q15	In the last 12 months, did your household acquire any new birds, such as chicken, ducks, quail, roosters/ fighting cocks, etc.?	YES/NO		
m_s7q16	Did your household purchase any of these new birds yourselves?	YES/NO		m_s7q15=YES
m_s7q17	If so, what was your main source of money?	Capital Codes		m_s7q16=YES
m_s7q17_other	SPECIFY OTHER SOURCE OF MONEY:	Text		m_s7q17=Other
m_s7q18	How much did you spend?	#	In last 12 months in pesos.	m_s7q16=YES
m_s7q19	Did your household receive any of these new birds without purchasing them yourselves?	YES/NO		m_s7q15=YES
m_s7q20	What was the main source of the resources used to acquire these birds?	Livestock Capital Codes		m_s7q19=YES

m_s7q20_other	SPECIFY OTHER SOURCE OF RESOURCES:	Text		m_s7q20=Other
m_s7q21	If you were to buy these birds with your own resources, how much would they cost?	#	In PHP	m_s7q19=YES
Dta file name: ~/Midline Household Survey/Section_8.dta				
Section 8: Enterprises				
Number	Question	Response	Notes	Relevance
Now I would like to ask you questions about non-agricultural business activities your household engages in.				
m_s8q1	Does anyone in this household fully, or partly, own and operate one or more non-agricultural, non-livestock, income generating enterprises?	YES/NO	Self-employed income-generating activity, doesn't include people who are employees/operators of another hh's enterprise	
m_s8q1_two	Has anyone in this household closed a non-agricultural, non-livestock, income generating enterprise in the last 12 months?	YES/NO		
Continue if m_s8q1=YES or m_s8q1_two=YES				
m_s8q2	In the past 12 months, has anyone in this household opened an ENTIRELY new non-agricultural enterprise?	YES/NO		
Repeat over new enterprises (m_s8q2=YES)

Number	Question	Response	Notes	Relevance
	<p>Hello, my name is [ENUMERATOR NAME]. I am from Innovations for Poverty Action (IPA), a non-profit research organization dedicated to finding innovative solutions to development issues in various countries. Our organization visited [BARANGAY NAME] roughly one year ago. We have now returned to conduct a follow-up interview with the households previously surveyed.</p> <p>Our questionnaire asks about household economic activity and welfare. The purpose of this survey is to better understand characteristics of households in Luzon, and to learn about the economic activity of household members. We hope our findings will help inform organizations working to support households like the ones in [BARANGAY NAME], and to improve livelihoods throughout the Philippines.</p> <p>As the barangay captain, we hope you can help us understand the characteristics of [BARANGAY NAME]. We would like to invite you to participate in a brief survey. The survey will take 10-15 minutes and will ask questions related to typhoon damage and drug violence in [BARANGAY NAME]. This survey contains no personal questions about you or anyone else.</p> <p>However, this survey contains questions about death and violence in [BARANGAY NAME] that you may find distressing. Participation in this study and in this interview is completely voluntary. You are free to decline to participate, to end participation at any time for any reason, or to refuse to answer any individual questions. There is no penalty for refusing to participate or to not answer any individual question.</p> <p>If you have any questions or concerns please contact me at ### or IPA Country Director at ###.</p>

Number	Question	Response	Notes	Relevance
Now, I would like to ask you a few questions about violence and personal safety in [BARANGAY NAME] over the last 12 months				
bcs_vio_2	Over the last 12 months, do you think residents have become more concerned that robbers might break into their home than they were before?	YES/NO		
bcs_vio_3	Over the last 12 months, do you think residents have become more concerned about walking in streets at night than they were before?	YES/NO		
bcs_vio_4	Overall, how do you think perceptions of personal safety have changed for residents over the last 12 months?	Increased Codes		
bcs_vio_5	Has there been any interpersonal violence in the barangay over the last 12 months?	YES/NO		
bcs_vio_6	How people have been killed by violence in the barangay over the last 12 months?	#		bcs_vio_5=YES
bcs_vio_7	Was there any violence related to the May 2016 election in this barangay?	YES/NO		
bcs_vio_8	How many drug influencers have surrendered to authorities in the last 12 months?	#	Drug influencers are drug sellers or drug users	
bcs_vio_9	Has there been a curfew in the barangay in the last 12 months?	YES/NO		

bcs_vio_10	Have local authorities gone house to house to create a private list of drug influencers?	YES/NO		
------------	--	--------	--	--

Dta file name: ~/Midline Barangay Captain Survey/Section_5.dta				
Section 5: Quality of Life				
Number	Question	Response	Notes	Relevance
Next I will ask you about the quality of life in [BARANGAY NAME].				
bcs_qua_1	During the past 5 years, have more people moved to this Barangay or have there been more people that moved away?	Moved Codes 2		
bcs_qua_2	Do you think life for the people in this barangay is better or worse than it was five years ago?	Life Codes		
bcs_qua_3	Why is life better?	Better Codes	Select all that apply	bcs_qua_2=Better
bcs_qua_4	Specify other reason	Text		bcs_qua_3=Other
bcs_qua_5	Why is life worse?	Worse Codes	Select all that apply	bcs_qua_2=Worse
bcs_qua_6	Specify other reason	Text		bcs_qua_5=Other
bcs_qua_7	Have there been any natural disasters beyond the typhoons we already discussed in this barangay in the last 5 years or so?	YES/NO		
bcs_qua_8	What type of natural disasters?	Disaster Codes	Select all that apply	bcs_qua_7=YES
bcs_qua_9	Specify other disaster	Text		bcs_qua_8=Other
bcs_qua_10	Is it easier or more difficult to find work in this barangay now than about five years ago?	Difficulty Codes		

Dta file name: ~/Midline Barangay Captain Survey/Section_6.dta				
Section 6: Recontact Survey				
Number	Question	Response	Notes	Relevance
We would like to ask a few questions about how we will be able to contact you later for our follow-up survey.				
bcs_rec_1	Do you have a mobile phone with you?	YES/NO		
bcs_rec_2	Please provide us your mobile phone number.	Text	Mobile numbers have 11 digits	bcs_rec_1=YES
bcs_rec_2_r	VERIFY NUMBER: [MOBILE PHONE NUMBER]	YES/NO		
bcs_rec_3	Please provide us with a second mobile number, if you have.	Text	Mobile Numbers have 11 digits.	bcs_rec_1=YES
bcs_rec_4	Do you have a landline phone with you or near your residence that may be used to contact you?	YES/NO		
bcs_rec_5	Please provide us the landline number	Text	Landline numbers have 9 digits.	bcs_rec_4=YES
bcs_rec_6	We anticipate being in the Barangay next year, around this same time. May we contact you then?	YES/NO		

Answer Codes - Midline Barangay Survey			
Region Codes		Power Codes	
1	Region 1 (Ilocos Region)	1	Connected to Grid
2	Region 2 (Cagayan Valley)	2	Local Hydroelectric

Appendix K: Endline Household Questionnaire

Dta file name: ~/Endline Household Survey/Section_0.dta				
Section 0: Household Identification				
Number	Question	Response	Notes	Relevance
eh_s0q1	FIELD OFFICER: WHAT IS YOUR NAME?	Staff Codes		
eh_s0q2	WHAT IS THE FIELD OFFICER'S NAME?	Text		eh_s0q1=OTHER
eh_s0q3	IS THIS A CALLBACK SURVEY?	YES/NO		
eh_s0q4	HOW MANY TIMES HAVE YOU VISITED THIS HOUSEHOLD (INCLUDING THIS VISIT)?	#		eh_s0q3=YES
eh_s0q5	IS THIS SURVEY BEING CONDUCTED BY PHONE?	YES/NO		
	IDENTIFYING HOUSEHOLD: IN THE FOLLOWING QUESTIONS, PLEASE SELECT THE REGION, PROVINCE, MUNICIPALITY, AND BARANGAY PROVIDED TO YOU ON THE IDENTIFYING FORM. PLEASE SELECT THE REGION, PROVINCE, MUNICIPALITY, AND BARANGAY PROVIDED TO YOU EVEN IF THIS IS NOT WHERE THE RESPONDENT/HOUSEHOLD IS ACTUALLY LOCATED.			
eh_s0q6	sAq6: SELECT REGION PROVIDED.	Region Codes	Selected from dynamic list	
eh_s0q7	SELECT PROVINCE PROVIDED.	Province Codes	Selected from dynamic list	

eh_s0q8	SELECT MUNICIPALITY PROVIDED.	Municipality Codes	Selected from dynamic list	
eh_s0q9	SELECT BARANGAY PROVIDED.	Barangay Codes	Selected from dynamic list	
eh_s0q10	SELECT UNIQUEID PROVIDED.	UniqueIDs	Selected from dynamic list	
eh_s0q11	[Display UniqueID] IS THIS THE CORRECT RESPONDENT ON YOUR LIST?	YES/NO	Must be YES to proceed	
eh_s0q12	Region: [Display Region], Province: [Display Province], Municipality: [Display Municipality], Barangay: [Display Barangay]. IS THIS THE CORRECT (REAL) ADDRESS OF THE HOUSEHOLD?	YES/NO		
eh_s0q13	WHY IS THE ADDRESS LISTED INCORRECT?	Typo, Household moved within barangay, household moved outside barangay		eh_s0q12=NO
s0q12=NO & HOUSEHOLD MOVED OUTSIDE BARANGAY:				
	IN THE FOLLOWING QUESTIONS, PLEASE SELECT OR WRITE-IN THE ACTUAL LOCATION OF THE RESPONDENT.			

eh_s0q14	SELECT ACTUAL REGION	Region Codes	Selected from dynamic list	
eh_s0q15	WHICH COUNTRY?	Text		eh_s0q14=Abroad
eh_s0q16	SELECT ACTUAL PROVINCE	Province Codes	Selected from dynamic list	
eh_s0q17	WRITE-IN OTHER PROVINCE:	Text		eh_s0q16=Other
eh_s0q18	SELECT ACTUAL MUNICIPALITY	Municipality Codes	Selected from dynamic list	
eh_s0q19	WRITE-IN OTHER MUNICIPALITY	Text		eh_s0q18=Other
eh_s0q20	SELECT ACTUAL BARANGAY	Barangay Codes	Selected from dynamic list	
eh_s0q21	WRITE IN OTHER BARANGAY	Text		eh_s0q20=Other
eh_s0q22	WRITE-IN STREET NAME	Text		
eh_s0q23	WRITE-IN PUROK/ ZONE/ SITIO/ PHASE	Text		
eh_s0q24	WRITE-IN NEAREST LANDMARK	Text		
eh_s0q25	WRITE IN ANY NEW PHONE NUMBER FOR THE HOUSEHOLD YOU ACQUIRED.	Number		
eh_s0q26	Please provide us with a second mobile number, if you have.	Number		
eh_s0q27	ARE YOU CURRENTLY IN THE HOUSEHOLD'S NEW LOCATION OR READY TO CONDUCT THE INTERVIEW WITH A HOUSEHOLD MEMBER?	YES/NO		

	PLEASE REMEMBER: SUBMIT THIS FORM, COMPLETE YOUR DAILY STATUS REPORT, AND CONTACT THE FIELD COORDINATOR WITH THE NEW ADDRESS ASAP. THEN YOU WILL NEED TO GO TO THE NEW LOCATION.		Survey Ends	eh_s0q27=NO
eh_s0q28	IS THERE AN ADULT HOUSEHOLD MEMBER AVAILABLE TO BE INTERVIEWED?	YES/NO	Survey Ends if NO	
eh_s0q29	IS THE BASELINE-RESPONDENT [Baseline Respondent Name] AVAILABLE?	YES/NO		
eh_s0q30	WHY IS THE BASELINE-RESPONDENT [Baseline Respondent Name] UNAVAILABLE?	Unavailable Codes		eh_s0q29=NO
eh_s0q31	OTHER REASON THE BASELINE-RESPONDENT [Baseline Respondent Name] IS UNAVAILABLE?	Text		eh_s0q30=Other
eh_s0q32	IS THIS THE SECOND TIME YOU HAVE ATTEMPTED TO INTERVIEW THE BASELINE-RESPONDENT [Baseline Respondent Name]?	YES/NO		eh_s0q29=NO
eh_s0q33	IS THE BASELINE RESPONDENT LIKELY TO BE BACK AT THE HOUSEHOLD WHILE YOUR SURVEYING TEAM IS STILL IN THE BARANGAY?	YES/NO		eh_s0q29=NO
	RETURN AT A LATER DATE.		Survey Ends	eh_s0q33=NO
IF BASELINE RESPONDENT UNAVAILABLE ON SECOND VISIT:				
eh_s0q34	IS THE MIDLINE-RESPONDENT [Midline Respondent Name] AVAILABLE?			
eh_s0q35	WHY IS THE MIDLINE-RESPONDENT [Midline Respondent Name] UNAVAILABLE?	Unavailable Codes		

eh_s0q36	OTHER REASON THE MIDLINE-RESPONDENT \${m_mid_resp_name} IS UNAVAILABLE?	Text		
	SINCE THE BASELINE-RESPONDENT WILL NOT BE BACK AT THE HOUSEHOLD WHILE THE SURVEYING TEAM IS IN THE BARANGAY, AND THE MIDLINE RESPONDENT IS UNAVAILABLE, DOES NOT EXIST, OR IS THE SAME PERSON, YOU MAY PROCEED BY INTERVIEWING THE AVAILABLE ADULT WITH THE MOST KNOWLEDGE OF ECONOMIC ACTIVITY IN THE HOUSEHOLD.			If baseline respondent and midline respondent unavailable, and they will not become available.
	SINCE THE BASELINE-RESPONDENT AND MIDLINE-RESPONDENT ARE UNAVAILABLE, AND THIS IS THE SECOND ATTEMPT TO CONDUCT THE INTERVIEW, YOU MAY CONDUCT THE INTERVIEW WITH THE AVAILABLE ADULT WITH THE MOST KNOWLEDGE OF ECONOMIC ACTIVITY IN THE HOUSEHOLD.			If baseline respondent and midline respondent unavailable, and it is the second attempt by the FO.
eh_s0q37	IS THE ADULT YOU ARE INTERVIEWING THE PERSON WITH THE MOST KNOWLEDGE OF ECONOMIC ACTIVITY IN THE HOUSEHOLD AMONG ADULTS THAT ARE AVAILABLE TO BE INTERVIEWED? AND DOES THIS PERSON (1) SLEEP IN THE SAME HOUSING UNIT AS THE OTHER HOUSEHOLD MEMBERS (INCLUDING THE BASELINE RESPONDENT IF HE/SHE HASN'T MOVED) AND (2) HAVE A COMMON ARRANGEMENT IN THE PREPARATION AND CONSUMPTION OF FOOD AT PRESENT?	YES/NO		If the FO is interviewing someone other than the baseline or midline respondent.

eh_s0q38	IN WHAT LANGUAGE IS THE INTERVIEW CONDUCTED?	Tagalog/Ilocano		
eh_s0q39	ARE YOU ALONE WITH THE RESPONDENT?			
	THE INTERVIEW SHOULD IDEALLY BE CONDUCTED ALONE! TRY USING YOUR TRAINING AND JUDGEMENT TO GET RID OF OTHERS THAT ARE PRESENT.			eh_s0q39=NO

Consent Form				
Number	Question	Response	Notes	Relevance
eh_sCq1	<p>Q44: Hello, my name is _____. I am from Innovations for Poverty Action (IPA), a non-profit research organization dedicated to finding innovative solutions to development issues in various countries. Our organization visited you previously roughly one year ago. We would like to conduct a follow-up survey with you today.</p> <p>I am visiting you today because we are conducting a study about household economic activity and welfare. The purpose of this survey is to better understand characteristics of households in Luzon, and to learn about the economic activity of household members. We hope our findings will help inform organizations working to support households like yours and to improve livelihoods throughout the Philippines.</p> <p>We would like to invite you to participate in this survey, which will ask questions regarding the composition of your household as well as the education, economic activity, income, and consumption of you and your household members. The survey could require approximately 1 to 3 hours of your time. For participating in this survey, you will receive a small token gift.</p>	YES/NO		

	<p>This research will help us better understand the needs of the community to improve future interventions directed toward households in this region. You may experience distress over the nature of some of the questions, especially those questions related to children in this household. Please know that all of your answers will be kept confidential, and no names will be stored or published with survey responses. Only research staff will have access to any data that could potentially identify you. Participation in this study and in this interview is completely voluntary. You are free to decline to participate, to end participation at any time for any reason, or to refuse to answer any individual questions. There is no penalty for refusing to participate or to not answer any individual question.</p> <p>If you have any questions or concerns please contact me at 0977-691-7502 or IPA Country Director Nassreena Sampaco-Baddiri at (632) 900-6190.</p> <p>Would you be willing to participate in the study?</p>			
eh_sCq2	Why don't you want to take part in the survey?	No Consent Codes		eh_sCs1=NO
eh_sCq3	Specify other reason	Text		eh_sCq2=Other
eh_sCq4	May we begin?	YES/NO		
eh_sCq5	Why can't we begin?	Text		eh_sCq4=NO

---	--	--

Section 1: Household Roster				
Number	Question	Response	Notes	Relevance
I would like to begin by getting a sense of who is in the household. I consider someone a household member if they (1) sleep in the same housing unit and (2) have a common arrangement in the preparation and consumption of food at present. This includes individuals who are not currently in the household, but will return within 30 days of their initial departure, sleep in this housing unit, and have a common arrangement in the preparation/consumption of food. We obtained a list of members and migrated members from two previous surveys. We will ask about each of these individuals first.				
THERE ARE [#] POTENTIAL HOUSEHOLD MEMBERS THAT WILL BE ASKED ABOUT.				
REPEATS OVER ALL POTENTIAL HOUSEHOLD MEMBERS:				
["Potential Household Members" are all individuals we have gained information about in the past, including migrants.]				
eh_slq1	PLEASE CONFIRM: [NAME]'s RELATION TO [BASELINE RESPONDENT] = [RELATION].	YES/NO	This data is pulled from previous surveys.	
eh_slq2	What is [NAME]'s relation to [BASELINE RESPONDENT]?	Text		eh_slq1=NO
eh_slq3	Does [NAME] sleep in the same housing unit as other household members and have a common arrangement in the preparation of food at present?	YES/NO		
eh_slq4	Did [NAME] sleep in the house yesterday?	YES/NO		eh_slq3=YES
eh_slq5	Will [NAME] return to the house within 30 days from when he or she last left?	YES/NO		eh_slq4=NO
eh_slq6	What is the year of birth of [NAME]?	####		
eh_slq7	How old is [NAME]?	##		

eh_slq9	<p>The following are names currently listed as household members:</p> <p>[LIST OF NAMES]</p> <p>Is there anyone else (including yourself) who sleeps in the same housing unit as other household members and has a common arrangement in the preparation of food at present?</p>		If yes, this second triggers a repeat group over new members.	
IF eh_slq9=YES:				
eh_slq10	Did this person sleep in the house yesterday?	YES/NO		
eh_slq11	Will this person return to the house within 30 days from when he or she last left?	YES/NO		eh_slq10=NO
eh_slq12	What is this person's name?	Text		
eh_slq13	What is the year of birth of [NAME]?	####		
eh_slq14	How old is [NAME]?	##		

eh_slq15	<p>The following are names currently listed as household members:</p> <p>[LIST OF NEW MEMBERS]</p> <p>Is there anyone else (including yourself) who sleeps in the same housing unit as other household members and has a common arrangement in the preparation of food at present?</p>	YES/NO	If Yes, this group repeats.	
	<p>MANUAL DATA TRANSFER STAGE:</p> <p>THE CHILD-SURVEY FO WILL NOW TRANSFER FROM THE HOUSEHOLD SURVEY TO THE CHILD SURVEY.</p>		<p>This begins the "Manual Data Transfer", where child names are transferred across to the child survey.</p>	
	NUMBER OF NEW CHILD MEMBERS: #		This number must be transferred.	

eh_slq16	<p>Q67: HERE ARE THE UNIQUEIDS AND NAMES OF THE CHILDREN TO BE INTERVIEWED:</p> <p>[LIST OF CHILD NAMES TO BE INTERVIEWED]</p> <p>I, [FO NAME], CONFIRM THIS LIST IS IDENTICAL TO SLIDE Q35 ON THE CHILD SURVEY. THE ORDER OF THE LIST MUST ALSO BE IDENTICAL!</p>	YES/NO	This list of names must be transferred. Must be YES to proceed.	
	NOW THAT THE ROSTER IS IDENTICAL ON THE TWO TABLETS, THE TWO FO'S CAN SPLIT UP.			

Dta file name: ~/Endline Household Survey/Section_2.dta				
Section 2: Roster Departures				
Number	Question	Response	Notes	Relevance
I would next like to ask some questions about members that have left the household. Our organization may wish to interview these individuals during a follow-up survey (with your consent if this member is a child). The following questions will help us locate these individuals during our follow-up survey.				
REPEAT OVER ALL POTENTIAL MEMBERS THAT ARE NOT HH MEMBERS: slq3=NO or (slq4=NO and slq5=NO) [Section skips if no roster departures]				
eh_s2q1	Why does [NAME] no longer live in the household?	Left Codes	If deceased, skip section	
eh_s2q2	WRITE IN OTHER REASON	Text		
eh_s2q3	Do you expect [NAME] to live in this household again at some point in the next 12 months?	YES/NO		
eh_s2q4	In their current location, does [NAME] regularly attend school (not including an apprenticeship or formal job training program)?	YES/NO		
eh_s2q5	In their current location, does [NAME] participate in an apprenticeship or training program?	YES/NO		
eh_s2q6	In their current location, does [NAME] work?	YES/NO		
eh_s2q7	In their current location, does [NAME] receive pay for this work?	YES/NO		
eh_s2q8	Did anyone here receive an advance or loan in exchange for [NAME]'s work?	YES/NO		

eh_s2q9	Has anyone in this household received money or in-kind transfers, for example, goods or services from [NAME] or on his/ her behalf from his/ her current location?	YES/NO

Section 5: SDQ				
Number	Question	Response	Notes	Relevance
Now I would like to ask you questions about each child currently in the household between the ages of 10 and 17. Please answer all items as best you can even if you are not absolutely certain.				
REPEATS OVER ALL HOUSEHOLD MEMBERS AGED 10-17:				
((slq3==1 and (slq4==1 or slq5==1)) or slq10==1 or slq11==1) and ((slq7>=10 and slq7<=17) (slq14>=10 and slq14<=17))				
Next I will ask about [NAME].				
For each item, please mark the box for Not True, Somewhat True or Certainly True. Please give your answers on the basis of [NAME] behavior over the last six months.				
eh_s5q1	Considerate of other people's feelings.	Not true, Somewhat True, Certainly True		
eh_s5q2	Restless, overactive, cannot stay still for long.	Not true, Somewhat True, Certainly True		
eh_s5q3	Often complains of headaches, stomach-aches or sickness.	Not true, Somewhat True, Certainly True		

eh_s5q4	Shares readily with other youth, for example books, games, food.	Not true, Somewhat True, Certainly True		
eh_s5q5	Often loses temper.	Not true, Somewhat True, Certainly True		
eh_s5q6	Would rather be alone than with other youth.	Not true, Somewhat True, Certainly True		
eh_s5q7	Generally well behaved, usually does what adults request.	Not true, Somewhat True, Certainly True		
eh_s5q8	Many worries or often seems worried.	Not true, Somewhat True, Certainly True		
eh_s5q9	Helpful if someone is hurt, upset or feeling ill.	Not true, Somewhat True, Certainly True		

eh_s5q10	Constantly fidgeting or squirming.	Not true, Somewhat True, Certainly True		
eh_s5q11	Has at least one good friend.	Not true, Somewhat True, Certainly True		
eh_s5q12	Often unhappy, depressed or tearful.	Not true, Somewhat True, Certainly True		
eh_s5q13	Generally liked by other youth.	Not true, Somewhat True, Certainly True		
eh_s5q14	Easily distracted, concentration wanders.	Not true, Somewhat True, Certainly True		
eh_s5q15	Nervous in new situations, easily loses confidence.	Not true, Somewhat True, Certainly True		

eh_s5q16	Kind to younger children.	Not true, Somewhat True, Certainly True		
eh_s5q17	Often offers to help others (parents, teachers, children).	Not true, Somewhat True, Certainly True		
eh_s5q18	Thinks things out before acting.	Not true, Somewhat True, Certainly True		
eh_s5q19	Gets along better with adults than with other youth.	Not true, Somewhat True, Certainly True		
eh_s5q20	Many fears, easily scared.	Not true, Somewhat True, Certainly True		
eh_s5q21	Good attention span, sees work through to the end.	Not true, Somewhat True, Certainly True		

Dta file name: ~/Endline Household Survey/Section_6.dta				
Section 6: Economic Activities				
Number	Question	Response	Notes	Relevance
<p>I would like to begin by going through the last 12 months and listing the different ways household members contributed to your household's livelihood. This might include paid employment, self employment activities that bring in income, but it should also include goods and services that you produce and consume only in your household, that you never intend to sell. If you have multiple activities that produce different goods or services, please list them separately.</p> <p>A lot of households change how they support themselves over the year. I will divide the year up into two seasons and ask you about how household members contribute to your household's livelihood separately for each season.</p>				

eh_s6q1	<p>Let's begin with the non-wet season that we are currently in (from November to [Current Month]). Can you tell me a livelihood activity you or your household conducted in the non-wet season? Remember, this work can be from employment or self-employment. It can generate an income or produce goods you consume, such as farming or fishing.</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Non-Wet-Season Activities				
eh_s6q2	Provide a name for this activity.	Text		
eh_s6q3	What is this activity?	Activity Codes		
eh_s6q4	Specify other activity.	Text		s6q3=eh_Other
eh_s6q5	Which household member was principally involved in this activity? For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		

eh_s6q6	<p>Can you tell me another livelihood activity you or your household conducted during the non-wet season?</p> <p>Remember we mean activiites that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
eh_s6q7	<p>Now, please think back to the wet season that ran from June to October. Apart from the activities mentioned in the current non-wet season:</p> <p>[Prior Activities]</p> <p>Are there any other ways that you or other household members helped contribute to your household's livelihood?</p> <p>Remember we mean activiites that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Wet-Season Activities				
eh_s6q8	Provide a name for this activity.	Text		

eh_s6q9	What is this activity?	Activity Codes		
eh_s6q10	Specify other activity.	Text		s6q9=eh_Other
eh_s6q11	Which household member was principally involved in this activity? For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		
eh_s6q12	<p>Can you tell me another livelihood activity you or your household conducted during the wet season?</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		

eh_s6q13	<p>Now, please think back to the later part of the last non-wet season that ran from last \${month1} to last May. Apart from the activities we have already mentioned:</p> <p>[Prior Activities]</p> <p>Are there any other ways that you or other household members helped contribute to your household's livelihood?</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Previous Non-Wet-Season Activities				
eh_s6q14	Provide a name for this activity.	Text		
eh_s6q15	What is this activity?	Activity Codes		
eh_s6q16	Specify other activity.	Text		eh_s6q15=Other

eh_s6q17	Which household member was principally involved in this activity? For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		
eh_s6q18	Can you tell me another livelihood activity you or your household conducted during the last non-wet season that ran from last March to last May?	YES/NO		

eh_s6q19	<p>Over the past 12 months, sometimes people forget about intermittent activities that they only do for a short period of time. This often includes selling food items, street vending, handicrafts, portering, or temporary casual labor. Can you think of any other activities that you or a household member maybe only did for a small part of the year or on occassion that we have not already discussed? The following activities have already been discussed:</p> <p>[Prior Activities]</p> <p>Remember we mean activiites that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Intermittent Activities				
eh_s6q20	Provide a name for this activity.	Text		
eh_s6q21	What is this activity?	Activity Codes		

eh_s6q22	Specify other activity.	Text		eh_s6q21=Other
eh_s6q23	Please select the household member principally involved in this activity. For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		
eh_s6q24	Can you tell me another such activity conducted over the last 12 months? Remember we mean activities that not just you conducted but that any of your HH members conducted, including [HH Roster]	YES/NO		

eh_s6q25	<p>Over the last 12 months, have any members of your household been involved in any fishing, farming, livestock or bird-related activities that we have not already discussed? Examples might include tending chickens, raising roosters, butchering meat, the sale of small or large livestock, the sale of birds (chicken, duck, quail, etc.), other livestock related animal products (wool, manure) or other bird related animal products (eggs, feathers, meat)</p> <p>The following activities have already been discussed:</p> <p>[Prior Activities]</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Farming Activities				
eh_s6q26	Provide a name for this activity.	Text		

eh_s6q27	What is this activity?	Activity Codes		
eh_s6q28	Specify other activity.	Text		eh_s6q27=Other
eh_s6q29	Please select the household member principally involved in this activity. For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		
eh_s6q30	<p>Have you or any household members been involved in any other fishing, farming, livestock, or bird-related activities over the last 12 months that we have not already discussed?</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		

eh_s6q31	<p>Activities like scavenging, foraging, collecting wood, water, or forest products can be forgotten too. Are there any other activities like these that have not been mentioned above that have contributed to you or your household's livelihood in the last 12 months?</p> <p>The following activities have already been discussed:</p> <p>[Prior Activities]</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Collecting Activities				
eh_s6q32	Provide a name for this activity.	Text		
eh_s6q33	What is this activity?	Activity Codes		
eh_s6q34	Specify other activity.	Text		eh_s6q33=Other

eh_s6q35	Please select the household member principally involved in this activity. For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		
eh_s6q36	<p>Have you or any household members been involved in any other activities involving scavenging, foraging, collecting wood, water, or forest products over the last 12 months that we have not already discussed?</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		

eh_s6q37	<p>Are there any other activities that you or your household members engaged in over the last 12 months that were largely for your own consumption that we have not already mentioned? This might include small-scale agriculture, such as on a garden plot, construction work, making clothes, handicrafts, fishing, working with livestock or birds, etc.</p> <p>The following activities have already been discussed:</p> <p>[Prior Activities]</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Own Consumption Activities				
eh_s6q38	Provide a name for this activity.	Text		
eh_s6q39	What is this activity?	Activity Codes		

eh_s6q40	Specify other activity.	Text		eh_s6q39=Other
eh_s6q41	Please select the household member principally involved in this activity. For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		
eh_s6q42	<p>Have you or any household members been involved in any other activities where you produced goods for your own consumption over the last 12 months that we have not already discussed?</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		

eh_s6q43	<p>When looking over the past 12 months, sometimes people forget about renting out machinery for income. This often includes renting water pumps, hand tractors, and videoke machines. Can you think of any rental activities that you or a household member did that we have not already discussed? The following activities have already been discussed:</p> <p>[Prior Activities]</p> <p>Remember we mean activiites that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
Repeats over Own Machine Activities				
eh_s6q44	Provide a name for this activity.	Text		
eh_s6q45	What is this activity?	Activity Codes		
eh_s6q46	Specify other activity.	Text		eh_s6q45=Other

eh_s6q47	Please select the household member principally involved in this activity. For paid employment, this would be the worker. For self-employment and farming, this would be the household member with principal decision-making authority.	HH Roster		
eh_s6q48	<p>Have you or any household members been involved in any other activities where you rented out machinery for income over the last 12 months that we have not already discussed?</p> <p>Remember we mean activities that not just you conducted but that any of your HH members conducted, including</p> <p>[HH Roster]</p>	YES/NO		
eh_s6q49	Which of these activities that we've just listed is most important to this household's economic well-being over the last 12 months?	Activities Listed Above		
	For each of these activities that we have listed, I have a few questions:			

Repeats over all economic activities listed above:				
	Next I will ask you about [Activity].			
eh_s6q50	What type of work is this activity? ([Activity])	Worktype Codes		
eh_s6q51	Specify other:	Text		eh_s6q50=Other
eh_s6q52	Where was the activity ([Activity]) located? Inside or outside the family home and property?	Inside/Outside		
eh_s6q53	Do you keep financial records for this business?	YES/NO		
eh_s6q54	We first interviewed you for this study about 2 years ago some time between February and May 2016. Had you conducted this activity ([Activity]) before our initial interview or only after the interview, within the last two years?	Before/After		
eh_s6q55	In the last 12 months, did this activity grow substantively, stay the same, or shrink substantively?	Grow Substantially/ Stay the same/ Shrink Substantially		

eh_s6q56	Did anyone the household, including you, participate in this activity ([Activity]) during each of the last 12 months or were household members only participating in this activity during parts of the year?	All of last 12 months/ Only some of last 12 months		
	In which months over the last 12 did household members participate in the activity ([Activity])?			eh_s6q56=Only some of last 12 months
eh_s6q57	Mar-17	YES/NO		
eh_s6q58	Apr-17	YES/NO		
eh_s6q59	May-17	YES/NO		
eh_s6q60	Jun-17	YES/NO		
eh_s6q61	Jul-17	YES/NO		
eh_s6q62	Aug-17	YES/NO		
eh_s6q63	Sep-17	YES/NO		
eh_s6q64	Oct-17	YES/NO		
eh_s6q65	Nov-17	YES/NO		
eh_s6q66	Dec-17	YES/NO		
eh_s6q67	Jan-18	YES/NO		
eh_s6q68	Feb-18	YES/NO		
eh_s6q69	Do you expect you or other household members to participate in this activity ([Activity]) in the future?	YES/NO		

eh_s6q70	Did the activity ([Activity]) generate any income for the household over the last 12 months?	YES/NO		
eh_s6q71	How much gross income or revenue was earned over the last 12 months from this activity ([Activity])? If income or revenue were received in-kind, please estimate the value.	Positive Number		
eh_s6q72	Some activities require expenses in order to do them. What are the total expenses associated with this activity ([Activity]) incurred by the household over the last 12 months?	Positive Number		
eh_s6q73	<p>The numbers you have just given me, imply that the activity's ([Activity]) total contribution of net income to your household's livelihood over the last 12 months is:</p> <p>[Revenue]- [Cost] = [Profit].</p> <p>Does that seem accurate?</p>	YES/NO	Must be yes to proceed	
eh_s6q74	FO: DID THE RESPONDENT REFER TO FINANCIAL RECORDS WHEN YOU ASKED ABOUT GROSS INCOME, COSTS, AND NET INCOME?	YES/NO		

eh_s6q75	Did this activity ([Activity]) produce any goods or services directly that your household consumed?	YES/NO		
eh_s6q76	If you were to buy those goods or services in a local market over the last 12 months instead of providing them yourself, how much do you think you would have to spend?	Positive Number		
	I would now like to ask you a few questions about other sources of income that we have not previously discussed. From this discussion, please exclude any activities that have already been discussed.			
eh_s6q77	In the past 12 months, did you or other members of your household participate in any gambling, raffles, or sweepstakes?	YES/NO		
eh_s6q78	In the past 12 months, how much did you or other members of your household win from gambling, raffles, or sweepstakes?	Positive Number		eh_s6q77=YES

eh_s6q79	In the past 12 months, what was the total value of any monetary or non-monetary gifts or remittances your household members gave to non-household members?	Positive Number		
eh_s6q80	In the past 12 months, what was the total value of any monetary or non-monetary gifts or remittances your household members received from non-household members?	Positive Number		
eh_s6q81	In the past 12 months, did you or other members of your household receive any income from the sale of property or land, including agricultural land?	YES/NO		
eh_s6q82	In the past 12 months, what is the total monetary value of everything you received in exchange for this property?			eh_s6q81=YES
eh_s6q83	In the past 12 months, did you or other members of your household receive any income from renting property or land, including agricultural land?	YES/NO		

eh_s6q84	In the past 12 months, what is the total monetary value of everything you received in exchange for this property?	Positive Number		eh_s6q83=YES
eh_s6q85	In the past 12 months, how much did you or other members of your household spend on property or land, including agricultural land?	Positive Number		

Dta file name: ~/Endline Household Survey/Section_7.dta				
Section 7: Government Transfers				
Number	Question	Response	Notes	Relevance
Next I would like to ask some questions related to transfers this household receives from the government or NGOs.				
eh_s7q1	In the past 12 months, did you or any member of your household receive benefits from the 4Ps (Pantawid Pamilyang Pilipino Program)?	YES/NO		
eh_s7q2	Were these benefits in cash, in-kind, or both?	Cash/In-Kind/Both		eh_s7q1=YES
eh_s7q3	How much cash did you receive in the last 12 months?	Positive Number		eh_s7q2=Cash or Both
eh_s7q4	What was the total value of the in kind transfers received in the last 12 months?	Positive Number		eh_s7q2=In-Kind or Both
eh_s7q5	In the past 12 months, did you or any member of your household receive benefits from the DSWD's (Department of Social Welfare and Development) SLP (Sustainable Livelihoods Program)?	YES/NO		
eh_s7q6	Was the assistance with employment or micro-enterprise?	Employment/Microenterprise		eh_s7q5=YES
eh_s7q7	Were these benefits in cash, in-kind, or both?	Cash/In-Kind/Both		eh_s7q6=Microenterprise

eh_s7q8	Were these benefits received as a group or individual?	Group/Individual		eh_s7q6=Microenterprise
eh_s7q9	What was the amount provided for the group livelihood? If benefits were received in-kind, please estimate the value.	Positive Number		eh_s7q8=Group
eh_s7q10	How many beneficiaries are part of this group?	Positive Number		eh_s7q8=Group
eh_s7q11	What was the value of the benefits provided? If benefits were received in-kind, please estimate the value.	Positive Number		eh_s7q6=Employment or eh_s7q8=Individual
eh_s7q12	Q321: In the past 12 months, did you or any member of your household receive SSS (Social Security System) benefits?	YES/NO		
eh_s7q13	Q322: How much money in pesos did your household receive in the past 12 months from SSS?	Positive Number		eh_s7q12=YES
eh_s7q14	Q323: In the past 12 months, did you or any member of your household receive KASAMA (Kabuhayan para sa Magulang ng Batang Manggagawa), also known as DILEEP (DOLE Integrated Livelihood and Emergency Program) benefits?	YES/NO		

eh_s7q15	Q324: What was the value of the in-kind transfer you received?	Positive Number		eh_s7q14=YES
eh_s7q16	Q325: Please describe the in-kind transfer	Asset Codes		eh_s7q14=YES
eh_s7q17	Q326: Specify other in-kind transfer.	Text		eh_s7q16=Other
eh_s7q18	Q327: Who decided what you would receive as the in-kind transfer?	Decide Codes		eh_s7q14=YES
	Q328: What factors were discussed or considered in deciding what you would receive in kind (check all that apply)?			eh_s7q14=YES
eh_s7q19	Q329: Household experience related to in-kind good(s)	YES/NO		eh_s7q14=YES
eh_s7q20	Q330: Other benefits being delivered in area	YES/NO		eh_s7q14=YES
eh_s7q21	Q331: Availability of training	YES/NO		eh_s7q14=YES
eh_s7q22	Q332: Desires and ambitions of household beneficiary	YES/NO		eh_s7q14=YES
eh_s7q23	Q333: Availability of asset	YES/NO		eh_s7q14=YES
eh_s7q24	Q334: Neighbors choices	YES/NO		eh_s7q14=YES
eh_s7q25	Q335: Other (specify)	YES/NO		eh_s7q14=YES
eh_s7q26	Q336: Specify other factor	Text		eh_s7q25=YES
eh_s7q27	Q337: In the past 12 months, did you or any member of your household receive benefits from the PCSO (Philippine Charity Sweepstakes	YES/NO		

	Office) to help cover medical bills?			
eh_s7q28	Q338: How much did your household receive in benefits in the last 12 months?	Positive Number		eh_s7q27=YES
eh_s7q29	Q339: Other than 4P's, SLP, SSS, KASAMA, DILEEP, and PCSO, did you or any member of your household receive any other money from the government or NGOs in the past 12 months? (for example: GSIS or scholarships)	YES/NO		
	Q340: What other transfers did your household receive in the past 12 months?			eh_s7q29=YES
eh_s7q30	GSIS	YES/NO		eh_s7q29=YES
eh_s7q31	Scholarships	YES/NO		eh_s7q29=YES
eh_s7q32	Other: Specify	YES/NO		eh_s7q29=YES
eh_s7q33	Q341: SPECIFY OTHER TRANSFER	Text		eh_s7q32=YES
eh_s7q34	Q342: How much did your household receive in total from the government or NGOs in the past 12 months (excluding 4Ps, SLP, SSS, KASAMA, DILEEP, and PCSO)?	Positive Number		

eh_s7q35	Q343: Has any household member participated in any training programs designed to teach you how to start a new business, how to manage an existing business, or jobskills?	YES/NO

Section 12: Life Events				
Number	Question	Response	Notes	Relevance
Next I will ask about some life events.				
eh_s12q1	Have any household members died during the last 12 months?	YES/NO		
eh_s12q2	Have any household members experienced grave illness requiring hospitalization or continuous medical treatment during the last 12 months?	YES/NO		
eh_s12q3	Have any household members experienced a loss of employment or business failure in the past 12 months?	YES/NO		
eh_s12q4	Has the household experienced any loss due to fire, earthquake, typhoon, flood, or other disaster during the last 12 months? This includes death of livestock to disease, for example.	YES/NO		
eh_s12q5	Has the household experienced harvest failure during the last 12 months? This only includes crops the household owns.	YES/NO		
eh_s12q6	Has the household experienced displacement due to natural or manmade disaster, armed conflict, infrastructure development project, or for other reasons during the last 12 months?	YES/NO		

Dta file name: ~/Endline Household Survey/Section_13.dta				
Section 13: Food Security				
Number	Question	Response	Notes	Relevance
We would like to ask a few questions about the adequacy of food in your household				
eh_s13q1	In the last 30 days, have adults cut the size of meals or skipped meals?	YES/NO		
eh_s13q2	On how many days?	Positive Number		eh_s13q1=YES
eh_s13q3	In the last 30 days, have adults gone a whole day without meals?	YES/NO		
eh_s13q4	On how many days?	Positive Number		eh_s13q3=YES
eh_s13q5	In the last 30 days, have children under 14 years of age cut the size of meals or skipped meals?	YES/NO		
eh_s13q6	On how many days?	Positive Number		eh_s13q5=YES
eh_s13q7	In the last 30 days, have children under 14 years of age gone a whole day without meals?	YES/NO		
eh_s13q8	On how many days?	Positive Number		eh_s13q7=YES
eh_s13q9	In the last 30 days, have household members had to eat less preferred or less expensive foods?	YES/NO		
eh_s13q10	On how many days?	Positive Number		eh_s13q9=YES

eh_s13q11	In the last 30 days, have household members had to borrow food or rely on help from a friend or relative to get enough food?	YES/NO		
eh_s13q12	On how many days?	Positive Number		eh_s13q11=YES
eh_s13q13	In the last 30 days, have household members had to purchase food on credit?	YES/NO		
eh_s13q14	On how many days?	Positive Number		eh_s13q13=YES
eh_s13q15	In the last 30 days, have household members had to gather wild food, hunt, or harvest immature crops because of food shortage?	YES/NO		
eh_s13q16	On how many days?	Positive Number		eh_s13q15=YES
eh_s13q17	In the last 30 days, have household members had to go ask for help from others because there was not enough food in the house?	YES/NO		
eh_s13q18	On how many days?	Positive Number		eh_s13q17=YES
eh_s13q19	Do all members of your household regularly eat at least 2 meals a day?	YES/NO		
eh_s13q20	Do all members usually eat until they are content each day?	YES/NO		
eh_s13q21	On how many days of the last 7 days did you eat meat, eggs, or fish?	0-7		
eh_s13q22	Do you have enough food in your home for tomorrow's meals?	YES/NO		

Dta file name: ~/Endline Household Survey/Section_14.dta				
Section 14: RMH				
Number	Question	Response	Notes	Relevance
We would like to ask a few questions about how you are feeling about your life recently and some of your experiences when you grew up.				
	For the next set of questions, please think about how often you have felt the following in the last month			
eh_s14q1	In the last 30 days, how often have you been upset because of something that happened unexpectedly?	PSS Codes		
eh_s14q2	In the last 30 days, how often have you felt that you were unable to control important things in your life	PSS Codes		
eh_s14q3	In the last 30 days, how often have you felt nervous and stressed	PSS Codes		
eh_s14q4	In the last 30 days, how often have you felt confident about your ability to handle your personal problems?	PSS Codes		
eh_s14q5	In the last 30 days, how often have you felt that things were going your way?	PSS Codes		
eh_s14q6	In the last 30 days, how often have you found that you could not cope with all the things that you had to do?	PSS Codes		
eh_s14q7	In the last 30 days, how often have you been able to control irritations in your life	PSS Codes		

eh_s14q8	In the last 30 days, how often have you felt that you were on top of things?	PSS Codes		
eh_s14q9	In the last 30 days, how often have you been angered because of things that happened that were outside of your control?	PSS Codes		
eh_s14q10	In the last 30 days, how often have you felt difficulties were piling up so high that you could not overcome them	PSS Codes		
eh_s14q11	At what age did you start contributing to your family's economic livelihood?	0-120		
eh_s14q12	At what age did you start earning money for yourself?	0-120		
eh_s14q13	At what age did you stop schooling?	0-120		
eh_s14q14	At what age did you marry?	0-120		
	Here is a list of qualities that children can be encouraged to learn at home. Which, if any, do you consider to be especially important? Please choose up to 5			
eh_s14q15	Independence	YES/NO		
eh_s14q16	Hard work	YES/NO		
eh_s14q17	Feeling of Responsibility	YES/NO		
eh_s14q18	Imagination	YES/NO		
eh_s14q19	Tolerance and Respect for Others	YES/NO		
eh_s14q20	Thrift and Saving Money	YES/NO		
eh_s14q21	Determination and Perseverance	YES/NO		
eh_s14q22	Religious Faith	YES/NO		
eh_s14q23	Unselfishness	YES/NO		
eh_s14q24	Obedience	YES/NO		

Dta file name: ~/Endline Household Survey/Section_15.dta			
Section 15: List Randomization			
Number	Randomly drew 3-Question survey:	Number	Randomly drew 4-Question survey:
	<p>For the next set of questions, I am going to read you a list. Each statement is written in a menu book. I would like you to tell me how many are true for you. You should NOT tell me which ones are true; just tell me how many are true. Let's first do an example.</p> <p>Of the following statements, how many are true for you:</p> <ul style="list-style-type: none"> . I live in the Philippines . I like to eat mangos . I like to swim. <p>Your answer should be 1, 2, or 3 (or 0 if you're not living in the Philippines). How many are true for you?</p>		<p>For the next set of questions, I am going to read you a list. Each statement is written on an index card. I would like you to tell me how many are true for you. You should NOT tell me which ones are true; just tell me how many are true. Let's first do an example.</p> <p>Of the following statements, how many are true for you:</p> <ul style="list-style-type: none"> . I live in the Philippines . I like to eat mangos . I like to swim. . I purchased rice in the past week. <p>Your answer should be 1, 2, 3, or 4 (or 0 if you're not living in the Philippines). How many are true for you?</p>

	As with our example, I will now read some statements and hand you index cards with one statement written on each card. I would like you to tell me how many are true for you, but do not tell me which ones are true.		As with our example, I will now read some statements and hand you a menu book. I would like you to tell me how many are true for you, but do not tell me which ones are true.
eh_s15q1	. I have more than six children . My first child was born in the year 2016 . My children like to eat rice	eh_s15q13	. I have more than six children . My first child was born in the year 2016 . My children like to eat rice . I do not want my children to work outside our household

ec_s0q15	SPECIFY OTHER LOCATION INTERVIEW IS TAKING PLACE.	Text		
ec_s0q16	HAVE YOU GIVEN THE CHILD AN OPPORTUNITY TO CALL THEIR PARENT TO CONFIRM CONSENT?	YES/NO		

Dta file name: ~/Endline Child Survey/Section_C.dta				
Section C: Consent				
Number	Question	Response	Notes	Relevance
<p>INSTRUCTIONS TO INTERVIEWER: (1) THIS FORM IS TO BE USED TO OBTAIN ASSENT FROM ALL CHILDREN AGED 10-17. (2) PARENTAL CONSENT MUST BE OBTAINED FIRST; THEN EACH CHILD MUST AGREE TO BE INTERVIEWED. (3) READ THE FOLLOWING STATEMENTS TO THE SELECTED RESPONDENT AND ANSWER ANY QUESTIONS THE RESPONDENT MAY HAVE. DO NOT BEGIN THE INTERVIEW UNTIL A PARENT HAS GIVEN CONSENT, ALL QUESTIONS HAVE BEEN ADDRESSED, AND THE RESPONDENT HAS AGREED TO PARTICIPATE IN THE STUDY. DO NOT INTERVIEW THE RESPONDENT IF HE/SHE DOES NOT GIVE ASSENT, EVEN IF THE PARENT HAS GIVEN CONSENT.</p>				
<p>FIND THE CHILD'S AVAILABLE GUARDIAN, READ THIS CONSENT MESSAGE:</p> <p>Hello, my name is [FO NAME]. IPA is conducting research about household economic activity and welfare. To conduct this research, we are not only interviewing the heads of the household but also children between the ages of 10 and 17.</p> <p>Thus, with your permission, we invite \${ch_interviewed_name} to participate in the part of this study that asks about the child's education, position in the household, allocation of time, and perceptions. This interview will take about 20 minutes of your child's time.</p> <p>[CHILD NAME]'s participation in this interview is completely voluntary. There is no penalty if you or your child refuse to participate.</p> <p>Before you and [CHILD NAME] decide whether s/he will be part of this study, it's important for all of you to understand why we're doing the research and what's involved. We encourage you to discuss the study with your child. If you or your child has questions about the research, feel free to ask us.</p> <p>You may find that the time and effort you take to be a participant in this study to be inconvenient. You may also find one or more of the questions that we ask to be upsetting. You or your child do not have to respond to any question that makes you feel uncomfortable, and you may end the interview at any time.</p> <p>There is no individual benefit expected from your child's participation in this study. You will not be paid nor will you have to pay for your participation in this study. This study will help researchers learn how to improve the livelihoods of you and your children.</p>				

We will keep all the information your child shares with us confidential. The study team will make every effort to protect their privacy and maintain the confidentiality of all the information that they provide, though there is a risk that it may be lost. Only research staff will have access to the information gathered during our conversation and no personal identifiers will be connected to the data for analysis.				
ec_scq1	May I talk with [CHILD NAME] in private?	YES/NO		
ec_scq2	If No, Why don't you want [CHILD NAME] to take part in the survey?	Text		scq1=ec_NO
<p>Hello, my name is [FO NAME]. I am from an organization called Innovations for Poverty Action (IPA). I am talking with parents and their children in the area to discover ways to improve the wellbeing of households like yours and children like you.</p> <p>To do this, I am inviting you and other children to take part in my research study. If you decide you want to be in this study, we will ask you to answer some questions about school, how you spend your time, and your perceptions. This activity will take about 20 minutes. You do not have to participate in this study if you do not wish to. You can skip any question or stop at any time. If there is a question you do not want to answer or are afraid to answer, you can skip it.</p> <p>Apart from your parent or guardian, other people will not know if you are in the study. The information I write down about you and other children will be kept safely locked up. When we tell other people or write an article about our research, we will not use your name.</p> <p>Your parent or guardian has said it is okay for you to be in the study. Now you get to choose if you would like to participate or not. You can choose to continue, or you can choose to stop at any other time. It is your decision. You can say no even if your mom or dad (or guardian) say yes. No one will be upset with you.</p> <p>Do you have any questions? You can also speak with your parent or guardian before you decide to continue with the interview.</p>				
ec_scq3	May we begin?	YES/NO		
ec_scq4	Why don't you want to be interviewed?	Text		ec_scq3=NO
ec_scq5	HAS THE FC/SFO ACCOMPANIED YOU AND VERIFIED THE CHILD REFUSAL?	YES/NO		ec_scq3=NO

Section 2: Time Allocation				
Number	Question	Response	Notes	Relevance
I want to begin by asking you a few questions about what activities you've participated in during the last 12 months and then collect more information on how you spend your time in the last 7 days.				
Babysitting / caring for other children in your household				
ec_s2q1	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q2	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q1=YES
ec_s2q3	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q1=YES
Caring for elderly, sick, or disabled in your household				
ec_s2q4	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q5	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q4=YES
ec_s2q6	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q4=YES
Cooking, cleaning, laundry, dishes, or shopping for your household				
ec_s2q7	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q8	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q7=YES
ec_s2q9	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q7=YES
Collecting wood, dung-cakes, or fodder for your household				

ec_s2q10	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q11	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q10=YES
ec_s2q12	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q10=YES
Collecting water for your household				
ec_s2q13	Did you perform this activity in the last 12 months	YES/NO		
ec_s2q14	How many days did you perform this activity in the last 7 days	0-7		ec_s2q13=YES
ec_s2q15	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q13=YES
Minor Construction, repair work, tailoring, or handicrafts for your household's own use (not for sale)				
ec_s2q16	Did you perform this activity in the last 12 months	YES/NO		
ec_s2q17	How many days did you perform this activity in the last 7 days	0-7		ec_s2q16=YES
ec_s2q18	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q16=YES
Run or do any kind of business, big or small, by yourself or with one or more partners				
ec_s2q19	Did you perform this activity in the last 12 months	YES/NO		
ec_s2q20	How many days did you perform this activity in the last 7 days	0-7		ec_s2q19=YES
ec_s2q21	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q19=YES
Do any work for pay, wage, salary, commission, or any kind of payment in kind, excluding domestic work				

ec_s2q22	Did you perform this activity in the last 12 months	YES/NO		
ec_s2q23	How many days did you perform this activity in the last 7 days	0-7		ec_s2q22=YES
ec_s2q24	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q22=YES
Do any work as a domestic worker for a wage, salary, or any payment in-kind				
ec_s2q25	Did you perform this activity in the last 12 months	YES/NO		
ec_s2q26	How many days did you perform this activity in the last 7 days	0-7		ec_s2q25=YES
ec_s2q27	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q25=YES
Help without pay in own household-operated business of any kind				
ec_s2q28	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q29	How many days did you perform this activity in the last 7 days	0-7		ec_s2q28=YES
ec_s2q30	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q28=YES
Help or do any work on your own or your household's plot, farm, food garden, or help in growing farm produce or in looking after animals				
ec_s2q31	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q32	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q31=YES
ec_s2q33	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q31=YES

Help or do any construction or major repair work on your own home, plot, or business, or those of other household's not mentioned before				
ec_s2q34	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q35	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q34=YES
ec_s2q36	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q34=YES
Catch any fish, prawns, shells, wild animals, or other food for sale or for your household's own consumption				
ec_s2q37	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q38	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q37=YES
ec_s2q39	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q37=YES
Produce any goods that you haven't already told us about that could be bought or sold in local markets (even if they are just for your household's own use)				
ec_s2q40	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q41	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q40=YES
ec_s2q42	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q40=YES
Do anything else that we haven't mentioned that contributed to your or your household's economic livelihood				
ec_s2q43	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q44	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q43=YES

ec_s2q45	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q43=YES
Studying, doing homework, or otherwise preparing for school.				
ec_s2q46	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q47	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q46=YES
ec_s2q48	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q46=YES
Attending school, include travel time to and from school				
ec_s2q49	Did you perform this activity in the last 12 months?	YES/NO		
ec_s2q50	How many days did you perform this activity in the last 7 days?	0-7		ec_s2q49=YES
ec_s2q51	How many hours did you spend doing this activity in the last 7 days? (in total)	0-168		ec_s2q49=YES
Now I am going to ask for a little more detail about some of the economic activities we just mentioned (items G-O)				
ec_s2q52	How would you describe the type of work where you spent the most time over the last 7 days?	Activity Codes		ec_s2q21>0 or ec_s2q24>0 or ec_s2q27>0 or ec_s2q30>0 or ec_s2q33>0 or ec_s2q36>0 or ec_s2q39>0 or ec_s2q42>0 or ec_s2q45>0
ec_s2q53	Specify other	Text		

ec_s2q54	How would you describe the type of work where you spend the most time over the last 12 months?	Activity Codes		ec_s2q19=YES or ec_s2q22=YES or ec_s2q25=YES or ec_s2q28=YES or ec_s2q31=YES or ec_s2q34=YES or ec_s2q37=YES or ec_s2q40=YES or ec_s2q43=YES
ec_s2q55	Specify other	Text		
ec_s2q56	How would you describe the type of work where you spent the second most time over the last 7 days?	Activity Codes		ec_s2q21>0 or ec_s2q24>0 or ec_s2q27>0 or ec_s2q30>0 or ec_s2q33>0 or sec_2q36>0 or ec_s2q39>0 or ec_s2q42>0 or ec_s2q45>0
ec_s2q57	Specify other	Text		
ec_s2q58	How would you describe the type of work where you spend the second most time over the last 12 months?	Activity Codes		ec_s2q19=YES or ec_s2q22=YES or ec_s2q25=YES or ec_s2q28=YES or ec_s2q31=YES or ec_s2q34=YES or ec_s2q37=YES or ec_s2q40=YES or ec_s2q43=YES
ec_s2q59	Specify other	Text		
ec_	Now I would like to ask some questions about what you did yesterday when you weren't working or doing chores.			
ec_s2q60	How many hours did you sleep last night?	0-24		

ec_s2q61	How many hours did you have yesterday to yourself for rest, relaxation or doing something purely for fun (not including sleep)?	0-24		
	Who mostly makes decisions about the following? If this is in the future, who do you expect to make this decision?			
ec_s2q62	How you spend your free time?	Decision Codes		
ec_s2q63	Whether you can socialize outside the home	Decision Codes		
ec_s2q64	How often you spend time with your friends?	Decision Codes		
ec_s2q65	What types of chores you do at home?	Decision Codes		
ec_s2q66	Whether you will help with a family business	Decision Codes		
ec_s2q67	Whether you will work for pay outside of the home and outside of a family business	Decision Codes		
ec_s2q68	Whether or not you will attend school on any given day	Decision Codes		
ec_s2q69	How much time you spend studying and preparing for school	Decision Codes		
ec_s2q70	When you will stop going to school	Decision Codes		
ec_s2q71	What type of work you will do after you are finished with schooling	Decision Codes		
ec_s2q72	When you will marry	Decision Codes		

Dta file name: ~/Endline Child Survey/Section_3.dta				
Section 3: Work Characteristics				
Number	Question	Response	Notes	Relevance
Section Activates if ec_s2q19=YES or ec_s2q22=YES or ec_s2q25=YES or ec_s2q28=YES or ec_s2q31=YES or ec_s2q34=YES or ec_s2q37=YES or ec_s2q40=YES or ec_s2q43=YES				
In my next set of questions, I am going to ask you about what you have experienced while working over the past 12 months. I'm interested in both time you've spent in a family farm or business, in your own business, or in any work you've done for others. Over the last 12 months:				
ec_s3q1	Was any of this work done after the sunset or before sunrise?	YES/NO		
ec_s3q2	Do you ever have problems seeing while doing any of this work because of inadequate lighting?	YES/NO		
ec_s3q3	Are there loud noises from machinery or people when you do this work?	YES/NO		
ec_s3q4	Have you ever had to do this work in extreme temperatures or in a setting with poor ventilation?	YES/NO		
ec_s3q5	Have you worked in an environment with lots of dust or debris?	YES/NO		
ec_s3q6	Do you carry heavy loads while doing this work?	YES/NO		
ec_s3q7	Was adequate water for drinking available to you while doing this work?	YES/NO		
ec_s3q8	Do you operate any machinery or heavy equipment in this work?	YES/NO		
ec_s3q9	Do you operate a motor vehicle in this work?	YES/NO		

ec_s3q10	Are you ever exposed to an open flame or need to be concerned about being burned in this work?	YES/NO		
ec_s3q11	Have you ever felt that you were at risk of drowning in this work?	YES/NO		
ec_s3q12	Have you been injured while doing any of this work?	YES/NO		
ec_s3q13	Do you handle any chemicals or toxic substances in this work including pesticides or fertilizers?	YES/NO		
ec_s3q14	Do you wear protective gear such as gloves and masks when working with these chemicals?	YES/NO		s3q13=YES
ec_s3q15	Have you noticed headaches, skin problem, breathing problems, stomach problems, or a general feeling of unwellness after doing this work?	YES/NO		
ec_s3q16	Do you think any of the work you've done is hazardous or dangerous to you?	YES/NO		
ec_s3q17	Who decides whether and how you work?	Work Decide Codes		
ec_s3q18	Specify other	Text		s3q17=Other
ec_s3q19	How would you describe the worksite you've worked at most frequently over the last 12 months?	Worksite Codes		
ec_s3q20	Specify other	Text		s3q19=Other
ec_s3q21	Have you ever worked outside of your family's dwelling or family owned fields in the last 12 months?	YES/NO		s3q19=Your family dwelling or s3q19=Family's Field

ec_s3q22	Have you ever spent the night at your worksite?	YES/NO		
ec_s3q23	Are there workers who are not members of your family at any of the worksites you've worked in over the last 12 months?	YES/NO		
ec_s3q24	Did you ever work in a setting where you weren't accompanied by a caregiver (such as a parent or grandparent)?	YES/NO		
ec_s3q25	In your work, are you able to take days off if you are not feeling well?	YES/NO		
ec_s3q26	In your work, are you able to refuse to do a task or job if it makes you uncomfortable or if you do not want to perform the task?	YES/NO		
ec_s3q27	Are you able to leave this work if you wanted to?	YES/NO		
	Why are you unable to leave this job? PROBE. DO NOT READ POSSIBLE ANSWERS.			s3q27=NO
ec_s3q29	Working off debt that still owe	YES/NO		s3q27=NO
ec_s3q30	Parents would punish	YES/NO		s3q27=NO
ec_s3q31	Employer or other person would punish me or family	YES/NO		s3q27=NO
ec_s3q32	No other work available	YES/NO		s3q27=NO
ec_s3q33	Not enough money to leave	YES/NO		s3q27=NO
ec_s3q34	Wouldn't know where to go	YES/NO		s3q27=NO
ec_s3q35	Other (specify)	Text		s3q27=NO
ec_s3q36	Have you been sold or transferred from one job to another against your will?	YES/NO		

ec_s3q37	How many hours do you work in a typical week over the last 12 months?	0-168		
	Have you received any of the following in exchange for your work in the last 12 months?			
ec_s3q39	Cash	YES/NO		
ec_s3q40	New Skill	YES/NO		
ec_s3q41	Education	YES/NO		
ec_s3q42	Shelter, food, clothing	YES/NO		
ec_s3q43	Medical support	YES/NO		
ec_s3q44	Nothing	YES/NO		
ec_s3q45	Other (specify)	YES/NO		
ec_s3q46	If you were provided food as a part of your work, was the amount of food adequate?	YES/NO		
ec_s3q47	Do you or your employer give part or all of your earnings/benefits to your parents/ guardians or other relatives?	YES/NO		
ec_s3q48	How much do you earn in a typical week (in cash or in kind and including the amount given to your parents)?	Positive Number		

Dta file name: ~/Endline Child Survey/Section_4.dta				
Section 4: Life Satisfaction				
Number	Question	Response	Notes	Relevance
ec_s4q1	Please imagine a ladder with steps numbered from 0 at the bottom to 10 at the top (show picture). Suppose the ladder represents the best possible life for you (10) and the bottom represents the worst possible life for you (0). On which step of the ladder do you feel you stand at the present time?	0-10		
<p>We would like you to know what thoughts about life you have had during the past several weeks. Think about how you spend each day and night and then think about how your life has been during most of this time. Here are some questions that ask you to indicate your satisfaction with your overall life. For each statement, please tell us if you strongly disagree, moderately disagree, mildly disagree, mildly agree, moderately agree, or strongly agree. It is important to know what you really think so please answer the questions the way you really think, not how you should think. This is not a test. There are NO right or wrong answers.</p> <p>Select level of agreement:</p>				
ec_s4q2	My life is going well.	Satisfaction Codes		
ec_s4q3	My life is just right.	Satisfaction Codes		
ec_s4q4	I would like to change many things in my life.	Satisfaction Codes		
ec_s4q5	I wish I had a different kind of life.	Satisfaction Codes		
ec_s4q6	I have a good life.	Satisfaction Codes		
ec_s4q7	I have what I want in life.	Satisfaction Codes		
ec_s4q8	My life is better than most kids.	Satisfaction Codes		

	Now we're going to talk about some of your plans for the future, ideas you have about what you want your life to be like or what you would like to accomplish when you are older			
ec_s4q9	What is a goal that you would like to achieve in the next week? It should be something you think you would really be able to do by this time next week.	Goal Codes		
ec_s4q10	Specify Other	Text		ec_s4q9=Other
ec_s4q11	What is a goal that you would like to achieve in the next year? It should be something you think you would really be able to do by this time next year. (If nothing comes to mind, probe and give suggestions, like a skill you could learn, or a new place you could visit	Goal Codes		
ec_s4q12	Specify Other	Text		ec_s4q11=Other
ec_s4q13	What steps are you taking to achieve your goal?	Step Codes		
ec_	For the following questions, please say how true each statement is for you			
ec_s4q14	When I am excited about reaching a goal, it is easy to start working toward it	True Codes		
ec_s4q15	I can usually find a way to stick with my plans and goals, even when it is tough	True Codes		
ec_s4q16	If it were your choice, at what age would you like to be married, if ever?	0-100
